Metal-Free Antiseize Lubricants

Free of metal particles, these lubricants prevent galling in stainless steel and other sensitive alloys. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning Molykote P37— Consists of molybdenum disulfide, zirconium, graphite, and other solids in an ultra-pure synthetic oil.

Standard— Made of graphite blended with high-temperature lubricating solids, extreme-pressure additives, and corrosion preventatives. Meet MIL-PRF-907E.

Aircraft Grade— Made with graphite and petrolatum, this lubricant meets MIL-T-5544.

Loctite Food Grade— These nonstaining lubricants work particularly well on stainless steel parts. NSF registered H1 for applications with incidental food contact.

Food Grade with PTFE— These nonstaining lubricants contain nonstick PTFE as well as corrosion inhibitors. They work particularly well on stainless steel parts. NSF registered H1 for applications with incidental food contact.

For information about lubricants, grease, and oil, see page 2164.

Antiseize Lubricating Tapes

Allowing easy, no-mess assembly and disassembly, these lubricants won't run or rub off your threaded connections—just wrap tape tightly around threads. Size is ½″ Wd. x 50 ft. Lg. These products are compliant under all state VOC rules in effect on October 1, 2010.

Copper—Made of copper and PTFE. Not recommended for stainless steel.

Nickel—Made of nickel and PTFE. Excellent for metals, especially stainless steel and aluminum. Color is silver.

	Temperature Range		Roll 1-4	Roll 5-Up
Copper	–450° to +2200°F	2290K1	$10.30	$9.25
Nickel	–450° to +2400°F	2290K2	15.43	13.86

Clean-Hands Antiseize Dispenser

Neatly, quickly, and efficiently apply antiseize to parts with this trigger-gun dispenser. It threads directly to the top of most 8-oz. and 1-lb. brush-top antiseize lubricant cans. Dispenser is made of steel and comes furnished with a brush tip.

1800K8 ..... $49.92

About Grease

There are several reasons to use grease as a lubricant: It adheres better than oil; it tends not to leak or run; and it can be formulated for conditions such as high temperatures, extreme pressure, and varying loads and speeds. It also resists moisture to prevent corrosion.

Grease Components—Grease is a semisolid made of base oil, thickener, and additives.

Base oils do the lubricating. Petroleum oil is the most economical. Synthetic oil (nonpetroleum) lasts longer and can generally withstand higher temperatures. Semisynthetic oil (a blend of petroleum and synthetic) balances lower cost with longer-lasting performance.

Thickeners are solid particles that hold the base oil in place. The chart below is a guide for comparing the relative properties of the most common thickeners.

Thickener	Heat Resistance	Moisture Resistance	Oxidation Resistance★
Aluminum	Fair	Good	Excellent
Calcium Sulfonate	Good	Excellent	Excellent
Carbon Black	Excellent	Fair	Good
Clay	Excellent	Fair	Good
Elastomer	Excellent	Good	Good
Lithium	Good	Good	Fair
High-Performance Lithium	Excellent	Excellent	Fair
PTFE	Good	Good	Good
Silica	Excellent	Excellent	Good
Silicone	Excellent	Excellent	Good
Sodium	Excellent	Poor	Poor

★ Oxidation of lubricants can produce sludge, varnish, gum, and acid.

Grease Consistency—The NLGI (National Lubricating Grease Institute) rates grease by its consistency on a numeric scale. The most common NLGI number is 2. Lower numbers are softer and flow better, while higher numbers are firmer, tend to stay in place, and are a good choice when leakage is a concern.

The table below compares the most common NLGI grades with household products that have similar consistencies.

NLGI No.	Consistency Comparison
0	Brown Mustard
1	Tomato Paste
2	Peanut Butter
3	Vegetable Shortening

Lithium-Thickened Grease

These multipurpose lubricants offer good heat and moisture resistance. These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobilux EP 111—Made of oil and molybdenum disulfide, these black greases are wear resistant and suitable for high-speed rotating couplings as well as low-speed open gears and plain bearings.

Mobilux EP 1 and ***EP 2***—This brown multipurpose grease offers rust and corrosion resistance for use in moist or wet conditions.

Dow Corning Molykote BR-2 Plus—Contain molybdenum disulfide to withstand extreme pressures. These black greases are suitable for moderate- to high-speed ball and roller bearings, conveyors, and shop equipment.

Dow Corning Molykote 44 with Silicone—Use these off-white silicone-based synthetic greases for antifriction bearings; plastic and rubber parts under light loads; and moderate- to high-speed applications.

■ Temperature range is –22° to +350°F.

Shell Alvania CG—Suitable for low speeds and heavy loads, use this dark brown grease on geared and flexible chain couplings.

Shell Alvania EP—Fortified with extreme-pressure additives, this brown grease can handle heavy, suddenly applied (shock) loads in bearing applications.

Shell Alvania RL—This is a low-noise grease. Color is amber.

White Lithium—This grease is for general lubrication. Stem is male.

White Lithium with PTFE—PTFE additive provides protection from friction. Aerosol has a female stem.

Marine Grade—These purple greases cling to surfaces, so they won't be washed away by water or salt.

Synthetic—Long-lasting with a wide temperature range, this light gray grease is great for bearings and gears as well as most plastics.

Bio-Based—This vegetable oil-based grease resists water and protects from rust. It also contains extreme-pressure additives for heavy duty applications. Color is brown.

For information about lubricants, grease, and oil, see page 2164. For more on grease, see page 2170.

High-Performance Lithium-Thickened Grease

Additives improve performance in severe operating conditions. These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobilgrease XHP 222—The choice for marine applications, this blue grease offers excellent adhesion plus rust and corrosion resistance.

Mobilgrease XHP 222 Special—Contains moly (molybdenum disulfide) for extreme-pressure applications. Color is dark gray.

Shell Albida EP—Formulated for extreme-pressure applications, these red greases are also suitable for heavy loads and wet conditions.

Dow Corning Molykote G-4700—This black synthetic grease contains moly (molybdenum disulfide) for extreme-pressure applications.

DuPont Teflon®—Teflon® fluoropolymers give these white greases nonstick and chemical-resistant properties. They are also corrosion resistant. Aerosol has a male stem.

DuPont Teflon® with Moly—In addition to Teflon® fluoropolymers for nonstick and chemical-resistant properties, these black greases have moly (molybdenum disulfide) to withstand extreme pressures.

Standard—Contains extreme-pressure additives. Color is dark red. Aerosol has a female stem.

Aluminum-Thickened Grease

Thickened with aluminum, these greases offer excellent oxidation resistance for long lubricant life. These products are compliant under all state VOC rules in effect on October 1, 2010.

With Moly—Contains moly (molybdenum disulfide) for extreme-pressure applications. Color is black.

Water Resistant—Lubricate and protect surfaces from corrosion in wet environments. Color is red.

Super Adhesive—Clings to surfaces, including vertical, for long-lasting protection. Stem is female. Color is red.

High Temperature—In addition to high temperatures, these greases also resist water. Color is green.

All ***food-grade greases*** are NSF registered H1 for incidental food contact.

Dow Corning Molykote—All greases are white. Aerosol has a female stem. *Molykote G-4500* and *4501* are synthetic.

Standard—Color is clear.

With PTFE—PTFE additive provides protection from friction. Color is white.

Dow Corning Molykote G-0010 Grease

This elastomer-thickened grease provides excellent heat and corrosion resistance, which makes it great for high-speed bearing applications. Temperature range is –20° to +340°F. Color is green.

This product is compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
Cartridge for Grease Gun (14.1 oz.)	2	10	4328T74	$5.53	$5.02

Dow Corning Molykote 1122 Chain and Open Gear Grease

Formulated for extreme-pressure applications involving chains and open gears, these black greases with moly (molybdenum disulfide) also resist wear. NSF registered H2 for applications with no possibility of food contact. Temperature range is 32° to 320°F. Aerosol has a female stem. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.

14-oz. Container	2-3	12	4328T28	44.39	40.29

For information about lubricants, grease, and oil, see page 2164. For more on grease, see page 2170.

Clay-Thickened Grease

Even at their highest temperatures, these greases maintain their consistency. These products are compliant under all state VOC rules in effect on October 1, 2010.

Extreme Pressure— These black greases contain moly (molybdenum disulfide) to withstand extreme pressures. Apply *cartridge for caulk gun* with a standard caulk gun (see page 3428).

Antispatter— An additive holds this green grease in place and protects it from spattering or pounding out, a common occurrence in heavy duty applications.

Semisynthetic— A blend of synthetic and petroleum-based oils, these amber greases last longer than petroleum-based grease.

High-Temperature Standard— Adheres to metal. Color is amber.

High-Temperature Acid Neutralizing— These white greases contain lead-free zinc oxide to neutralize acid.

High-Temperature Extreme Pressure— These black greases contain moly (molybdenum disulfide) to withstand extreme pressures.

High-Temperature Semisynthetic— A blend of synthetic and petroleum-based oils, these silver greases contain moly (molybdenum disulfide) and aluminum for increased wear resistance.

Ultra High-Temperature Food-Grade Grease

With a temperature range of –40° to +800°F, this tan grease can take the heat. It's thickened with calcium sulfonate, which makes it great for wet, extreme-pressure applications. NSF registered H1 for incidental food contact. This product is compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
Cartridge for Grease Gun (16 oz.)	2	4	2136K11	$31.02	$27.87

DuPont Grease with Teflon®

Teflon® fluoropolymers give these multipurpose greases nonstick and chemical-resistant properties. They are thickened with calcium sulfonate, which makes them great for wet, dirty applications. Temperature range is –40° to +350°F. Color is red. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.

Long-Lasting Synthetic Grease

Synthetic base oils allow these greases to last longer than petroleum-based grease. These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobilith SHC 100— Meets the requirements of most electric motor manufacturers for grease-lubricated bearings. Color is red.

Mobilith SHC 220— Use this red grease in extreme-pressure applications.

Mobilith SHC PM 460— Resists rust and corrosion. It's suitable for bearings under heavy loads at low speeds. Color is off-white.

Mobiltemp SHC 32— This red grease offers excellent wear resistance for long service life.

Mobilgrease 28— Offers excellent wear and corrosion resistance for extreme-pressure applications in a wide range of temperatures. Meets MIL-PRF-81322G. Color is red.

Silica-Thickened— Dry to a long-lasting, water-resistant white film.

Silicone-Thickened Food Grade— These clear greases are NSF registered H1 for applications with incidental food contact.

For information about lubricants, grease, and oil, see page 2164. For more on grease, see page 2170.

High-Temperature Synthetic Grease

Increase the time between applications with these synthetic greases that handle your high-temperature applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning Molykote 41— Thickened with carbon for excellent heat resistance. Color is black.

Dow Corning Molykote 3451— Fluorocarbon thickener adds chemical resistance to these white greases. NSF registered H2 for applications with no possibility of food contact.

Standard— Thickened with silicone, grease is blue.

Food Grade with PTFE— These silica-thickened greases have a PTFE additive that reduces friction and waterproofs metal surfaces. NSF registered H1 for applications with incidental food contact. Color is white. Aerosols have a female stem.

With Moly— As temperature increases, so does the performance of this gray grease. It is thickened with sodium and contains molybdenum disulfide to withstand extreme pressures.

Size	NLGI No.	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.

Low-Temperature Synthetic Grease

Low temperatures won't affect the lubricity of these greases. All have synthetic base oils, which increase the time between applications. Greases are white. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning Molykote 33— These greases are NSF registered H2 for applications with no possibility of food contact.

Food Grade— Thickened with aluminum, these greases are NSF registered H1 for applications with incidental food contact.

Electrically and Thermally Conductive Grease

Take on heat and electricity transfer applications with these nonsilicone greases—a high silver content (80-90%) gives them excellent conductivity. These greases are suitable for ESD (electrostatic discharge) and EMI (electromagnetic interference) shielding applications. Their volume electrical resistivity, a measure of how well a material opposes the flow of electricity, is less than 0.005 ohm-cm. Thermal conductivity, a measure of a material's ability to transfer heat, is 60 Btu-in./hr.-sq. ft. °F. Resistivity is the opposite of conductivity, so a low resistivity number means high conductivity.

These silver-colored greases have a temperature range of –40° to +302° F. NSF registered H2 for applications with no possibility of food contact. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.		
0.5-oz. Container	3	1219K57	$74.90
1-oz. Container	3	1219K59	149.90

Water-Safe Synthetic Grease

NSF 61 certified for use with drinking (potable) water, this silica-thickened grease holds up in harsh, wet environments. Synthetic oil base increases the time between applications. Temperature range is –40° to +400° F. This product is compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
8-oz. Tube	2	12	2982K22	$22.91	$21.04

High-Vacuum Grease

The firm consistency of these white synthetic greases is excellent for high-vacuum applications. The synthetic oil base increases the time between applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning— Made of silicone with silica thickener, these greases are suitable for clean room use.

With PTFE— Also known as Fomblin grease, this grease is thickened with PTFE to reduce friction and resist chemicals.

Size	NLGI No.	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
Dow Corning *(–40° to +400°F)*					
5.3-oz. Tube	3-4	6	2966K52	$25.34	$23.16
8-lb. Container	3-4	1	2966K58	—	545.05
With PTFE *(–4° to +482°F)*					
3.5-oz. Tube	3	1	1326K59	—	97.90

Electrical Contact Grease

Lubricate, clean, deoxidize, and prevent corrosion all with one performance-enhancing grease, which is designed to improve the performance of your electrical contacts. Temperature range is –40° to +500° F. These products are compliant under all state VOC rules in effect on October 1, 2010.

Standard— Particle free. Color is amber.

Aluminum— Has aluminum particles and is for use on aluminum parts that won't come in contact with each other. Color is gray.

Copper— Has copper particles to assist oxide breakup and resist abrasion on surfaces that require conductivity. Color is red.

Graphite— Has graphite particles to absorb and dissipate heat. Color is gray.

	Size	NLGI No.		
Standard	8-oz. Container	2	9050T2	$31.53
Aluminum	8-oz. Container	2	9050T6	31.53
Copper	8-oz. Container	2	9050T4	31.53
Graphite	8-oz. Container	2	9050T8	36.79

Electrical Insulating Grease

Also known as dielectric grease, these insulating silicone greases lubricate electrical devices and systems. Synthetic oil base increases the time between applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning 4— These translucent white greases act as a moisture barrier. NSF 51 certified for use with food and NSF 61 certified for use with drinking (potable) water. Meet FDA 21 CFR 175.300 and SAE-AS8660.

Dow Corning 5— Use this translucent gray grease on insulators, bushings, and high-current switches.

Standard— These translucent white greases are corrosion resistant and contain a silica thickener that won't react with rubber. Suitable for use on O-rings, gaskets, and seals in vacuum systems.

Food Grade— These clear greases are NSF registered H1 for applications with incidental food contact.

For information about lubricants, grease, and oil, see page 2164. For more on grease, see page 2170.

Valve and Packing Grease

Lubricate and seal valves and pump packings. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning 111 and ***112***—Made of silicone fluids and silica fillers, these translucent white greases act as moisture barriers.

Dow Corning Molykote 3452—Fluorocarbon thickeners add chemical resistance. Color is white.

Standard—Good for tight tolerance plug valves and high-pressure seals. Color is amber.

PTFE Gel—Thickened with silica, this nonstick grease reduces friction and includes a detergent additive that cleans while it lubricates. Color is amber.

DuPont Krytox Grease and Oil

Extreme temperature swings are no problem for these Krytox greases and oils. They also resist aggressive chemicals and are long lasting. These products are compliant under all state VOC rules in effect on October 1, 2010.

Food-grade greases and ***oils*** are NSF registered H1 for applications with incidental food contact.

Grease

Greases are thickened with PTFE to reduce friction except for ***High-Temperature XHT-BDX greases***, which are thickened with boron nitride for added thermal stability. Color is white, unless otherwise indicated.

Corrosion Resistant—Sodium nitrite additives give these greases better resistance to moisture and oxygen than standard grease.

Extreme Pressure—Made with molybdenum disulfide, this grease is effective on highly loaded gears and bearings. Color is black.

High Temperature—Does not evaporate under high temperatures.

High Vacuum—This insoluble grease has a low vapor pressure and gives superior performance in vacuum systems.

Electronics Grade—High purity for use in clean rooms and electronic assembly. They are not conductive.

Aerospace Grade—Meet MIL-PRF-27617 specifications.

For information about lubricants, grease, and oil, see page 2164. For more on grease, see page 2170.

Extreme-Pressure Grease and Oil

Able to withstand pressures up to 50,000 psi, these lubricants also repel water and resist corrosion. Use them on lathes, machine ways, cams, and bearings. Grease is thickened with petroleum wax and is green; oil is black. These products are compliant under all state VOC rules in effect on October 1, 2010. *Note:* Not rated for temperature.

No-Spill Fluid Containers

Even when turned upside down, these containers keep fluids inside. Use them to hold lubricants, cutting fluids, and many other liquids without worrying about spills. Containers are made of polyethylene. They include an applicator brush as well as a plug for storing liquids. Size is 3″ Dia. × 2½″ Ht.

About Oil

Viscosity is the thickness, or resistance to flow, of an oil. Various organizations have different scales on which oil viscosity is measured. The *International Organization for Standardization (ISO) and Society of Automotive Engineers (SAE)* each assign a grade number. Oils with higher numbers are thicker than those with lower numbers. The *Saybolt Seconds Universal (SSU)* viscosity test measures the number of seconds it takes for 60 cc (cubic centimeters) of oil to flow through a specified diameter hole. The *American Gear Manufacturers Association (AGMA)* has its own grading system specific to industrial gear oil.

Additives improve specific characteristics of an oil, such as load capacity and corrosion resistance. *Detergent additives* prevent sludge and other engine deposits by keeping unwanted particles suspended in the oil. These suspended particles are later removed when the oil passes through a filter. Detergents are most commonly found in engine oils. *Nondetergent oils* are suitable for applications in which the formation of sludge and other deposits is not a problem and no filter is present.

Machine Oil

Meet your general purpose needs with these nondetergent oils. Suitable for machine tools, circulating systems, and reciprocating equipment, they all resist rust and oxidation. These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobil DTE— Color is amber.

Standard— Also known as turbine oil. ISO grade 22 and 32 are yellow; ISO grade 46-150 are amber.

Food Grade— NSF registered H1 for applications with incidental food contact. These oils inhibit the growth of bacteria, yeast, and mold. Color is clear.

Extendable-Spout Oiler— Filled with standard machine oil, this oiler telescopes to 7″ and flexes to reach lubrication points. Oil is yellow.

For information about lubricants, grease, and oil, see page 2164. For more about oil, see page 2175.

Gear Oil

Extreme pressure additives strengthen these nondetergent oils to withstand heavy loads found in gears and gear-drive systems. These products are compliant under all state VOC rules in effect on October 1, 2010.

For open gear lubricants, see page 2166. For chain and open gear grease, see page 2171.

Mobilgear—The choice for industrial as well as marine applications. Color is amber.

Mobil SHC—These oils are synthetic, which means less frequent oil changes. Color is orange.

Standard—NSF registered H2 for applications with no possibility of food contact. Color is amber.

Food Grade—NSF registered H1 for applications with incidental food contact. They inhibit the growth of bacteria, yeast, and mold. Color is clear.

Semisynthetic—A blend of synthetic and petroleum oils, these oils are more economical than synthetic oils. Color is yellow.

Synthetic—Change oil less often with these long-lasting synthetic oils. Color is yellow.

Hydraulic Oil

Antiwear additives make these nondetergent oils the best choice for hydraulic systems and equipment. These products are compliant under all state VOC rules in effect on October 1, 2010.

Zinc-Free—Use where zinc waste disposal can be a problem. Color is amber.

All Weather—Great for outdoor equipment, these oils withstand harsh weather conditions. Color is amber.

Food Grade—NSF registered H1 for applications with incidental food contact. Color is white.

Biodegradable Food Grade—An environmentally friendly alternative to petroleum-based oil, this vegetable oil is NSF registered H1 for applications with incidental food contact. Color is yellow.

For information about lubricants, grease, and oil, see page 2164. For more about oil, see page 2175.

Air Tool Oil

Keep air-powered equipment running longer and cleaner for greater power and less downtime. These nondetergent oils absorb water to reduce potential condensation problems and keep gum and sludge from forming. They contain corrosion inhibitors as well as antiwear and extreme-pressure additives.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobil Almo 525— Color is amber.

Standard— Color is clear.

Food Grade— NSF registered H1 for applications with incidental food contact. Color is clear.

Winter Grade— Resists temperatures as low as –50° F. Color is green.

Synthetic— This oil reduces the frequency of oil changes. It's highly compatible with most rubber and plastics. Color is clear.

Cleaner— Removes rust, dirt, and varnish from air tools. Just apply to the inlet of your air tool and connect tool to air line. Color is yellow.

Engine Oil

Primarily for use in automotive applications, these oils also work well with machinery. These products are compliant under all state VOC rules in effect on October 1, 2010.

Single-Grade Gasoline Engine Oil— Good for heavy duty jobs, these single-grade oils are detergent oils that neutralize acids and prevent sludge and varnish deposits. Color is amber.

Multigrade Gasoline Engine Oil— These all-climate, multiviscosity oils protect engines in warm and cold environments. They are also detergent oils that neutralize acids and prevent sludge and varnish deposits. Color is amber.

Mobil Delvac 1230 Diesel Engine Oil— In addition to excellent oxidation and thermal stability, this oil prevents rust and corrosion to keep engines clean and extend oil life. Color is brown.

Mobil Delvac MX Diesel Engine Oil— The choice for high-performance diesel applications, this oil provides outstanding rust protection and thermal stability, which prevents sludge and deposits to extend engine life. Color is brown.

Mobil Delvac 1300 Super Diesel Engine Oil— Use this extra-high-performance diesel engine oil in your most severe applications. It controls soot to improve engine efficiency and extend engine life. Color is brown.

Diesel Engine Oil— This heavy duty oil works with all diesel engines to protect against wear and deposits. Color is amber.

Synthetic Oil for Gasoline and Diesel Engines— Even in severe conditions, this long-lasting oil extends engine life as well as the time between oil changes. Compatible with petroleum-based oils, you can add it without draining your existing oil first. Color is amber.

For information about lubricants, grease, and oil, see page 2164.

Cutting and Tapping Fluids and Compounds

Use full strength while machining for easier and faster tapping, drilling, and milling. These fluids also improve surface finishes, extend tool life, and help you meet closer tolerances. These products are compliant under all state VOC rules in effect on October 1, 2010 (unless noted).

Standard fluids are for use on all metals. ***Water-based*** fluids are for use on all metals except magnesium.

Tap Magic—Aerosols have a female stem.

★ This product is compliant under all state VOC rules in effect on October 1, 2010 except in the Los Angeles area.

Tap Magic—*Extra Thick* is for hard metals such as titanium and stainless steel. *Protap* is for all metals.

Cool Tool II—For use on all metals.

LPS Tapmatic Edge—*Cream* works especially well for vertical applications and is also good for forming and bending. *Stick* is perfect for use on rotating and stationary cutting tools and grinding belts. It's 2 3/16″ Dia. × 9 9/16″ long.

LPS—Aerosol has a male stem.

Easy-Coat Cutting and Tapping Stick Waxes

Pocket Size

Push-Up

Prevent mess and waste in machining operations with these easy-to-apply, nonstaining lubricants. They are chlorine free and sulfur free. These products are compliant under all state VOC rules in effect on October 1, 2010.

Pocket Size—This crayon-like stick is 1/2″ Dia. × 4 1/2″ long. Color is tan.

Push-Up—Advance the stick by pushing the bottom of the cartridge. Size is 2″ Dia. × 10 3/4″ long. Color is green.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
0.43-oz. Pocket Size	24	1009K22	$2.92	$2.62
16-oz. Push-Up	12	1379K63	10.83	9.82

Micro-Drop Coolants

Developed for use in droplet coolant dispensers (sold separately on page 2205), only a small amount of these coolants is needed for machining purposes. They're chlorine free, sulfur free, nonflammable, and nontoxic. Suitable for all metals. Use at full strength.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	*Synthetic*		*Vegetable*	
1-gal. Container	10305K16	$101.72	10305K26	$104.21

Marvel Mystery Gasoline and Oil Additive

Simply add these additives directly to gasoline and oil to improve your engine performance. In gas it cleans fuel injectors, prevents sticky rings and valves, and limits the buildup of varnish and gum. In oil it eases start-up in cold temperatures, extends oil life, and prevents the formation of acid and sludge. It can also be used with marine and diesel engines. Color is red.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.

32-oz. Container	6	1272K1	6.35	5.79
1-gal. Container	4	1272K2	24.33	22.19
5-gal. Container	1	1272K3	____	106.93

Cutting and Tapping Fluid and Coolant

Perform multiple jobs at once with this cutting fluid that also acts as a coolant and rust inhibitor. Use on all metals for tapping as well as light to medium duty drilling and pipe threading applications. Fluid is nonstaining. Stem is male.

This product is compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
13-oz. Aerosol	12	1387K24	$12.56	$11.51

For information about lubricants and oil, see page 2164. For more about oil, see page 2175.

Two- and Four-Cycle Engine Oil

Take care of your two- and four-cycle engines. These oils reduce engine wear and provide superior rust protection. Two-cycle oil is blue. Four-cycle oil is brown. These products are compliant under all state VOC rules in effect on October 1, 2010.

	Container Size	SSU @ 100° F	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
Two-Cycle Oil	8 oz.	250	24	1274K15	$2.77	$2.54
Two-Cycle Oil	32 oz.	250	12	1274K17	5.68	5.21
Four-Cycle Oil	32 oz.	478	12	1274K21	6.24	5.72

Gas Stabilizer

Just add to the gas tank of your two- or four-cycle engines and you can store your engine without draining the gas. One ounce of stabilizer treats 2.5 gallons of gasoline. Color is blue. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
32-oz. Container	4	10385K47	$20.62	$18.33

Cutting and Threading Oil

The choice for a variety of cutting, pipe threading, and broaching operations. Use full strength except for Mobil Mobilcut, which must be diluted. These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobil Mobilmet— *426* is for light to moderate duty use. It is chlorine free, sulfur free, and nonstaining. *766* is for heavy duty use on difficult-to-machine steels.

Mobil Mobilcut— Offers excellent rust protection. It forms a milky emulsion when mixed with water.

Heavy Duty— These sulfur-based oils are designed for use with ferrous metals; they can stain nonferrous metals. Use alone or blended with other oils. *Light-colored oil* allows you to see your workpiece and is chlorine free. *Dark-colored oil* is a high-lubricity oil that allows increased speeds and is especially effective for machining tough ferrous metals.

Nonstaining— Also known as plumber's lard oil, this oil provides excellent lubricity for fine surface finishes and extended tool life. It's chlorine free and sulfur free.

Food Grade— NSF registered H1 for applications where there is incidental food contact. It contains anticorrosion additives.

	1 Gallon Pkg. Qty.		1 Gallon Each Partial Pkg.	1 Gallon Each Full Pkg.	5 Gallon	5 Gallon Each

Stamping and Drawing Vanishing Oil

Shortly after application, this oil evaporates to leave only a thin residue to protect your machined parts. Evaporation time is 15 minutes to 2 hours, depending on factors such as humidity and temperature. Oil is nonstaining, chlorine free, and sulfur free. Use it full strength on all metals up to 0.025" thick.

Standard — These products are compliant under all state VOC rules in effect on October 1, 2010 except in the Los Angeles area.

Food Grade— Complies with FDA specification 21 CFR 178.3910 for applications with incidental food contact. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.

Misting Coolant Concentrates

These synthetic coolants are fortified with rust inhibitors and prevent foul odors. Dilute them with water to suit your drilling, milling, tapping, sawing, turning, and grinding operations on all types of metal. They can even be used for flooding applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

For coolant dispensers, see pages 2204-2205.

Kool Mist— Sulfide free. *Formula 78* is for light duty applications. *Formula 77* provides greater lubricity for tougher machining jobs.

Tri-Cool— Contain extreme-pressure additives that reduce heat buildup and extend tool life. Chlorine free and sulfur free.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.

Coolants for Near-Dry Machining

Only a minimal amount of coolant is needed, which means you'll have near-dry workpieces that require little to no cleanup and disposal costs. Apply these coolants to your tool's cutting edge to reduce friction between the tool and the workpiece. Great for shallow drilling, reaming, and tapping operations as well as on band saws and circular saws.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
1.6-oz. Stick	12	1503K1	$2.24	$2.05
4-oz. Liquid	12	1503K5	8.56	7.78
12-oz. Paste	6	1503K3	15.72	14.41

Sawing Fluid Concentrates

Able to take the heat off of tough metalworking jobs, these fluids cool while they lubricate, preventing metal distortion and corrosion in sawing applications. Use them with power hacksaws, circular saws, and band saws. All fluids are chlorine free and sulfur free. *Synthetic* and *Nonstaining* are odorless. Dilute them with water to suit your application. These products are compliant under all state VOC rules in effect on October 1, 2010.

Semisynthetic— A blend of synthetic and mineral oils for extra lubricity. Use them on all metals, including yellow metals.

Synthetic— Use this oil with all metals except aluminum, brass, bronze, and copper.

Nonstaining— You can use this synthetic oil on all metals except brass, bronze, and copper.

	1 Gallon Pkg. Qty.		1 Gallon Each Partial Pkg.	1 Gallon Each Full Pkg.	5 Gallon	5 Gallon Each
Semisynthetic	4	1197K8	$16.98	$15.13	1197K9	$73.72
Synthetic	4	1197K4	18.32	16.32	1197K5	77.76
Nonstaining	4	1197K6	19.08	16.99	1197K7	80.84

Stamping and Drawing Concentrate

Replace the multiple oils you're using with just one. These water-soluble synthetic oil concentrates are designed to handle all of your light to heavy duty stamping and drawing applications. They're nonstaining, chlorine free, and sulfur free. Suitable for all metals. Dilute with water to suit your application.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
1-gal. Container	4	1077K2	$50.56	$45.50
5-gal. Container	1	1077K5	____	210.00

For information about lubricants and oil, see page 2164. For more about oil, see page 2175.

Machining and Grinding Concentrates

Dilute these nonstaining, water-soluble concentrates with water to meet your specific machining and grinding applications. They are for use with most metals. These products are compliant under all state VOC rules in effect on October 1, 2010.

Light Duty—This economical, general purpose concentrate is formulated for intermittent service.

Medium Duty—Increases tool life and is designed for more demanding applications.

Heavy Duty—Tough enough to handle difficult-to-machine alloys as well as the most severe applications, this concentrate is the best product for extending tool life.

Semisynthetic and ***Synthetic***—All are chlorine free and sulfur free. *Long-lasting semisynthetic* provides excellent cooling and is for use where traditional soluble oils can't adequately cool.

	1 Gallon				5 Gallon
	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.	Each
Light Duty	6	1310K1	$21.98	$19.78	1310K2 $91.54
Medium Duty	6	1020K11	24.44	22.00	1020K12 109.00
Heavy Duty	6	1021K17	26.71	24.04	1021K19 113.56
Semisynthetic	6	1216K13	22.78	20.50	1216K14 98.00
Long-Lasting Semisynthetic	4	1216K21	37.13	33.29	1216K22 156.69
Synthetic	6	1216K15	22.18	19.96	1216K16 92.44

Quenching Oil

To minimize cracking and distortion, these nonstaining oils cool parts uniformly and more slowly than water. Use them to harden production parts, taps, dies, and forming tools. Chlorine and sulfur free. Use full strength.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	28-Second Quench Time		11-Second Quench Time	
1-gal. Container	3202K5	$18.29	3202K4	$19.13
5-gal. Container	3202K1	76.50	3202K7	79.94
30-gal. Container	3202K2	423.21	3202K9	449.23

Polishing Oil

Apply these oils to abrasive belts and wheels for extended life and improved surface finishes. They increase production by allowing belts and wheels to handle more workpieces. They also work well as general purpose grinding oils. Suitable for use on all metals as well as glass. These oils are nonstaining, chlorine free, and sulfur free. Use full strength. Aerosol has a female stem.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
11-oz. Aerosol	12	1165K26	$5.24	$4.72
1-gal. Container	6	1165K28	36.27	32.64

Honing Oil

In addition to producing a smooth finish on internal cylindrical surfaces, these oils also keep abrasive surfaces clean. They're nonstaining and chlorine free. Contain sulfur. Suitable for use on all metals. Use full strength.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
1-gal. Container	4	1823K1	$28.33	$25.32
5-gal. Container	1	1823K2	———	110.00

Tool-Sharpening Oil

Formulated for general tool sharpening, these highly refined oils are also ideal for many lubricating applications. They're nonstaining, chlorine free, and sulfur free. Use full strength.

These products are compliant under all state VOC rules in effect on October 1, 2010. Meet U.S. Pharmacopeia standards for mineral oil purity.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
4.5-oz. Container	10	1386K41	$6.40	$5.72
16-oz. Container	10	1386K42	12.03	10.75
32-oz. Container	5	1386K43	19.67	18.09

Machining and Grinding Concentrate for Carbide

To keep the leaching of cobalt from carbide to a minimum, use these synthetic concentrates that are specially formulated for carbide applications. They provide excellent lubricity, cooling, and corrosion protection for use on carbide, carbon steel, cast iron, high alloy steels, and stainless steels. They are also free of mineral oil, chlorine, and sulfur. Dilute with water.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
1-gal. Container	4	1537K1	$53.11	$47.80
5-gal. Container	1	1537K2	———	230.92

Electric Discharge Machining Fluid

Demanding EDM (electric discharge machining) applications are no problem for these fluids. They are low viscosity, which means they allow faster machining speeds for fine surface finishes. They are also long lasting and extend tool life. Use them on a variety of hard metals. Use full strength.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
1-gal. Container	4	1496K1	$18.41	$16.69
5-gal. Container	1	1496K2	———	83.25

Pipe and Tube Bending Lubricant

Make bending and forming pipe and tube easier with this lubricant. It's a pourable gel that produces a high-strength lubricating film on your metal surface. Great for use on ferrous metals as well as high-strength alloys.

Lubricant offers excellent rust protection. It is chlorine, sulfur, and phosphorous free. Use full strength.

This product is compliant under all state VOC rules in effect on October 1, 2010.

Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
1-gal. Container	4	1529K1	$40.10	$35.85

Cutting Fluid and Coolant Deodorizers

Neutralize and eliminate acidic and alkaline gases, including hydrogen sulfide and ammonia. These nontoxic deodorizers dissolve odors from recycled water-soluble coolant and cutting fluids. They're also suitable for wastewater and trash collection areas. Use full strength or dilute and use as a spray. These products are compliant under all state VOC rules in effect on October 1, 2010.

Standard—Until it reacts completely with odorous gases, this neutralizer emits a fresh scent.

Extra Strength—Strong enough for use in sludge treatment.

	Container Size		
Standard	70 oz.	63545T22	$54.76
Extra Strength	77 oz.	63545T21	83.72

Reservoir Cleaner and Anti-Foaming Liquid

Clean and defoam your coolant systems to keep them running in tiptop shape. Dilute with water. These products are compliant under all state VOC rules in effect on October 1, 2010.

Reservoir Cleaner—Removes oily residue, soap deposits, and heavy soils from your reservoir without harming paints, coatings, seals, and hoses.

Anti-Foaming Liquid—Simply add this liquid to your reservoir to reduce foam in your coolants.

	Container Size	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
Reservoir Cleaner	1 gal.	4	2147K1	$37.33	$32.74
Anti-Foaming Liquid	64 oz.	4	2147K3	44.22	38.12

For grease gun nozzles, see page 2183.

Grease Guns

Apply your grease to the precise lubrication point desired with these steel-barreled grease guns. All guns have a 1/8″ NPT female connection for attaching nozzles and a nozzle with coupler for standard grease fittings, unless noted. Fill in one of three ways (unless otherwise stated): insert a cartridge of grease, draw grease from a container using the bottom handle to suction load, or bulk load using a filler pump or by scooping grease into the gun barrel.

Pistol Grip—Designed for one-hand operation, these grease guns allow you to access hard-to-reach areas. Filler nipple (sold separately) is required for bulk loading with a filler pump.

High Pressure Lever Grip—Put yourself in complete control of your grease output. When you're using a thick grease or need to force the grease through clogged fittings, use short, quick strokes. Use longer strokes to dispense larger amounts at lower pressures. Guns include a 1/8″ NPT male filler nipple for bulk loading.

Lever Grip for Grease and Oil—Similar to the grease gun shown above, with the additional ability to dispense both grease and oil. Bulk load only by pouring in oil or scooping in grease.

Dual Output—Switch the latch pin to toggle between low-pressure and high-pressure settings. Use the low-pressure setting to dispense more grease with each stroke. Make use of the high-pressure setting when you're dispensing thicker grease or need to force grease through clogged fittings. Include a 1/8″ NPT male filler nipple for bulk loading.

High Output—Dispense large quantities of grease quickly with little effort. Includes a 1/8″ NPT male filler nipple for bulk loading.

Extreme Pressure—Easily dispense even the thickest grease with the highest-pressure-rated gun we offer. Screw the T-handle into the barrel to prime the gun and produce 20 or more strokes without priming or screwing down the handle again. Has a 1/4″ NPT female connection for attaching nozzles. Includes a coupler for button-head grease fittings, 1/8″ NPT male filler nipple for bulk loading, pressure gauge, relief valve, and carrying strap.

Battery-Powered Grease Guns

Powered by a rechargeable battery, these guns require less work than a manual gun. Plus, with no air hose to tie you down, they offer more freedom than air-powered guns. Hold the trigger for a continuous flow of grease, or deliver 1 oz. of grease per 50 strokes.

Guns have a steel barrel plus a 7/16″ female UNEF connection for attaching nozzles, and a 30″ long flexible nozzle that has both a coupler for standard grease fittings and a steel spring guard to prevent kinking. A rechargeable battery, battery charger, and a carrying case are also included. Fill in one of three ways: insert a cartridge of grease, draw grease from a container using the bottom handle to suction load, or use a filler nipple and filler pump to bulk load. Load capacity is 16 oz.

Standard—Delivers a continuous flow of 2.9 oz. of grease per minute. Maximum pressure is 6,000 psi. Requires a 12-volt NiCad battery (included).

High Output—Delivers a continuous flow of 8.5 oz. of grease per minute. Maximum pressure is 7,500 psi. Requires a 14.4-volt NiCad battery (included).

	Grease Guns		***Repl. Batteries***		***Repl. Battery Chargers***	
Standard	**1524K2**	$215.62	**1524K7**	$86.13	**1524K81**	$49.02
High Output	**1524K3**	266.92	**1524K8**	90.45	**1524K91**	51.47
Replacement 30″ Flexible Nozzle					**1524K82**	32.25

Air-Powered Grease Guns

Use air power to dispense grease without the effort that manual grease guns require. One-hand operation allows you to access hard-to-reach areas. Both guns have a steel barrel and a coupler for standard grease fittings. Fill in one of three ways: insert a cartridge of grease, draw grease from a container using the bottom handle to suction load, or use a filler nipple and filler pump to bulk load.

Single Shot—Deliver a single shot of grease with each pull of the trigger. Gun has a 1/8″ NPT female connection for attaching nozzles, and includes a 6″ angled rigid nozzle, as well as a 12″ flexible nozzle. It requires a 30-150 psi air supply. Air inlet connection is 1/4″ NPT female.

Continuous Flow—As long as the trigger is engaged, grease flows continuously at 10 oz. per minute. Gun has a 7/16″ UNEF female connection for attaching nozzles and includes a 30″ flexible nozzle. It requires a 40-150 psi air supply. Air inlet connection is 1/4″ NPS female.

Single Shot

Continuous Flow

	Strokes per oz.	Max. psi	Load Cap., oz.

Grease Guns & Grease Injector Needles

For information about grease, see page 2170. For grease gun nozzles, see page 2183.

Compact Grease Guns

Designed for one-hand operation, these grease guns allow you to access hard-to-reach areas that larger guns can't. Guns have a steel barrel.

Style A—Includes a 1/8″ NPT female connection for attaching nozzles and a nozzle with coupler for standard grease fittings. Use the included 3-oz. black NLGI No. 1.5 lithium grease cartridge or suction load. *Replacement grease gun cartridges* have a temperature range of 0° to 280° F. Grease is compliant under all state VOC rules in effect on October 1, 2010.

Styles B & C—The palm and finger-grip design of these guns allows for easy operation. Push the plunger with your thumb to dispense grease. Include a 1/8″ NPT female connection for attaching nozzles.

Style B also includes a nozzle with coupler for standard grease fittings. Suction load or bulk load only.

Style C also includes a nozzle with coupler for flush-style fittings. Bulk load only.

Nozzle Type	Strokes per oz.	Max. psi	Load Cap., oz.		
For Standard Grease Fittings					
A ... 6″ Rigid	80	4,500	3	**1060K52**	$15.82

B ... 4″ Rigid	150	3,000	5	**10225K95**	18.51
For Flush-Style Grease Fittings					
C ... 13/16″ Needle	150	3,000	3	**10225K97**	16.35
Replacement 3-oz. Grease Gun Cartridges for Style A					
Black NLGI No. 1.5 Lithium Grease (4/Pkg.)				**1060K31**	$13.05
White NLGI No. 2 Lithium Grease (4/Pkg.)				**1060K63**	13.18

Compact Light Duty Grease Guns

Thread this handy 6″ gun directly onto a tube of multipurpose lithium grease (sold separately), and push the plunger to dispense.

Grease is rated NLGI No. 2 and has a temperature range of –25° to +280° F. Grease is compliant under all state VOC rules in effect on October 1, 2010.

Grease Gun ..... **1348K22** $7.55

8-oz. Tube White Lithium Grease ..... **1348K13** 5.85

Ready-to-Use Grease Guns

Eliminate the time and mess of manual filling. This 6 5/16″ long gun comes loaded with 2 oz. of blue NLGI No. 2 lithium grease. When the gun is empty, simply throw it away. Push-action allows easy one-hand operation. It has a transparent body for a clear view of the grease level and a universal nozzle that fits standard grease fittings. Maximum pressure is 3,700 psi. Grease temperature range is –31° to +302° F. Grease is compliant under all state VOC rules in effect on October 1, 2010.

8648K5 ..... $10.54

Grease Gun Holders

Keep your grease guns close at hand. Holder is steel and mounts to walls, vehicles, and other machinery. The center latch secures any standard 2 1/4″ dia. grease gun. Holder has two 1/4″ dia. mounting holes.

Compatible with the grease guns on page 2181 (except 1059K).

1275K33 ..... $7.73

Pinpoint Grease Injector Needles

Perfect for dispensing precise amounts of grease, these needles lubricate sealed bearings and allow pinpoint penetration of boots and gaskets in hard-to-reach areas.

Snap-In Needles

Snap directly into the coupler of your grease gun for speed and convenience. Made of Type 304 stainless steel.

Needle Style	Ga.	OD	Needle Lg.	O'all Lg.

Thread-On Needles

Choose from straight, 45° angle, and 90° angle needles. Threads are 1/4″-28 female. Needles are made of Type 304 stainless steel; fittings are brass.

Needles with 1/8″ NPT male fitting thread directly into your grease gun barrel.

Needles with 1/8″ NPT female fitting thread into your grease gun nozzle.

Replacement needles have 1/4″-28 female threads.

To Order: Please specify needle size: 17 ga. (0.058″ OD), 18 ga. (0.050″ OD), or 20 ga. (0.035″ OD).

1/4″	**8829T4**	32.87

Grease Gun Filler Pumps

Simplify bulk loading your grease guns. Insert the grease gun's filler nipple into the socket located on top of the unit, then pump the lever handle.

Pump for ***35-lb. containers*** delivers 1 oz. of grease per stroke; pump for ***120-lb. containers*** delivers 2.6 oz. of grease per stroke.

Pumps are steel and include a 1/8″ NPT male steel filler nipple, steel drum cover, and follower plate for pumping extra-thick grease. Pail and drum are not included.

Fits Container	Max. Container Size Dia.	Max. Container Size Ht.		
35 lb. (5 gal.) Container	12″	13 1/4″	1014K21	$78.14
120 lb. (16 gal.) Drum	15″	27″	1008K25	259.14
Repl. Filler Nipple (1/8″ NPT male connection)			1014K31	6.53

Lincoln Grease Gun Filler Nipples

Attach this steel nipple to a manual grease gun so you can load the gun using a Lincoln brand filler pump. Size is 11/32″ Dia. × 3/4″ Lg. Connection is 1/8″ NPT male.

1099K11 ..... $4.89

Grease Fitting Cleaning Tools

Easily open clogged grease fittings. To use, fill the tool with a light oil, place the tool's coupler on the grease fitting, and tap it with a light hammer. This tapping action forces oil through the fitting and quickly removes contamination from its bearings, joints, and other mechanical parts. Tool is steel with a corrosion-resistant coating. Includes a flexible rubber, nylon reinforced extension hose for hard-to-reach fittings. Furnished in a plastic case.

5059K1 ..... $58.98

Rigid Grease Gun Nozzles

One end has a 1/8″ NPT male connection that threads into your grease gun barrel, while the other end has a coupler for standard grease fittings. Use with manual grease guns, unless noted.

(A) Rigid Nozzle with Coupler—Combination nozzle/coupler fits standard grease fittings.

(B) Rigid Nozzle with High-Pressure Coupler—Same as Style A but built for heavy duty use.

(C) Rigid Nozzle with 180° Swivel Coupler—A sliding, spring-loaded sleeve locks coupler in place for straight applications and at any angle up to 90°.

(D) Rigid-to-Flexible Nozzle with Coupler—Slide the sleeve along this nozzle to shift from a rigid to a flexible nozzle. For use with both manual grease guns and air-powered grease guns.

	Lg.	Max. psi

Bare Lubrication Points

Form a positive, leakproof seal between grease guns and compatible grease fittings with these steel couplers. Use with both manual grease guns and air-powered grease systems, unless noted.

360° Swivel Coupler— Built-in swivel and 45° body allow 360° movement. Coupler locks in place at any 45° angle.

Slide-On Coupler— Lubricate your hard-to-reach standard grease fittings from the side with this slide-on coupler.

Coupler for Bare Lubrication Points— Use when your lubrication point doesn't have a grease fitting. Use with manual grease guns only.

2906K7 ..... $132.87

For information about grease, see page 2170.

Grease Lubricators

Efficient and easy to use, these hand-operated lubricators are made of steel. All include a grease pump plunger system, container cover, and delivery hose.

Maximum pressure is 10,000 psi. Use with NLGI Nos. 0-2 grease.

For grease containers, see page 1708.

Styles A and ***B*** have a gun with 6″ rigid nozzle, ⅛″ BSPT female coupler for standard grease fittings, and follower plate. The gun has a switch for moving between low-pressure or high-pressure settings. The low-pressure setting dispenses more grease with each stroke. Make use of the high-pressure setting when you're dispensing thicker grease or need to force grease through clogged fittings.

Style C dispenses over 50% more grease per stroke than the other manual lubricators we offer. It has a ¼″ NPT female coupler for standard grease fittings.

Fits Container	Strokes per oz.	Container Included	Delivery Hose Lg.		
Dual-Output Lubricators					
A 7 lb. (1 gal.)	23 or 63	No	5 ft.	1368K16	$209.06
A 11 lb.	23 or 63	Yes	5 ft.	1368K19	234.48
B 35 lb. (5 gal.)	23 or 63	No	10 ft.	1368K24	328.88
13″ Flexible Nozzle				1368K22	29.38
High-Output Lubricator					
C 35 lb. (5 gal.)	7.5	No	5 ft.	10465K31	423.87

Battery-Powered Grease Lubricator

Attach this lubricator to a battery for go-anywhere convenience. Battery sold separately. Lubricator dispenses 5 oz. of NLGI Nos. 0-2 grease per minute. It has a steel housing and includes a grease pump, cover assembly, delivery hose, universal z-swivel fitting for connecting the delivery hose to your gun, and a gun with coupler for standard grease fittings. Container is not included. For containers, see page 1708.

Optional steel cart holds grease pump and 35-lb. container. It has two pneumatic tires and a plastic box to hold the battery.

Lubricator with Battery and Optional Steel Cart (Container Not Included)

Fits Container	Max. psi	Delivery Hose Lg.		
35 lb. (5 gal.)	5,000	25 ft.	1412K42	$1,350.00
Battery (12 VDC)			71805K82	114.47
Optional Steel Cart			1412K43	427.82

Air-Powered Grease Lubricators

Dispense grease without the effort that manual lubricators require. These air-powered lubricators have a follower plate that moves down the inside of the container as the grease level drops; this compresses the grease and prevents vapor pockets from forming as the grease is dispensed. Lubricators are steel and include a grease pump, cover assembly, delivery hose, and a coupler for standard grease fittings. Air inlet connection is ¼″ NPT female for low- and high-volume lubricators and ¼″ NPTF female for medium-volume lubricators.

Styles D-G also have a universal z-swivel fitting for connecting the delivery hose to your gun, and either a standard gun or a booster gun (see table below). Guns dispense grease at the same pressure as your existing grease system, up to the maximum grease outlet pressure. In addition, booster guns allow you to increase the pressure up to the maximum gun pressure. *Note:* Do not use flexible nozzles with these booster guns. *Styles D* and *F* include a four-caster dolly; *Style G* includes a two-wheel hand truck.

Style H has a ⅜″ NPT male connection and can be used with standard gun 1306K13 on page 2186. Includes a 3-ft. long air inlet hose.

Containers and drums are not included. For containers, see page 1708; for drums, see pages 1712-1713.

For information about pipe size, see pages 2-3. For information about grease, see page 2170.

Guns for Powered Grease Lubricators

Standard Gun *Booster Gun*

Team these guns with any air-powered or electric grease system. All are made of steel; nozzle extensions include a coupler for standard grease fittings.

Standard Guns— Dispense grease at the same pressure as your existing grease system, up to 7,500 psi.

Booster Guns— Increase the pressure of your existing grease system to deliver greater pressure when you need it. *Note:* Do not use flexible extension hoses with these booster guns.

Thread Size	Nozzle Type	Max. psi		
Standard Guns				
1/4″ NPTF Female	6″ Rigid	7,500	1306K11	$115.40
3/8″ NPT Female	6″ Rigid	7,500	1306K13	132.75
Booster Guns				
1/8″ NPT Male	8″ Rigid	10,000	14195K66	181.51
1/8″ NPT Female	6″ Rigid	12,000	14195K25	125.47

No-Kink Grease Hose Swivels

Straight, Male × Female ***90° Angle, Male × Female*** ***Universal, Male × Male***

Make handling your manual or air-powered grease dispensing system easier while preventing damage to hoses. These steel fittings connect the delivery hose to the gun and swivel 360° to keep hoses from twisting.

Thread Size	Max. psi		
Straight			
1/8″ NPT Male × 1/8″ NPT Female	4,500	1092K21	$17.29
1/8″ NPT Male × 1/8″ NPT Male	4,500	1092K19	43.92
1/2″-27 Male × 1/4″ NPT Male	7,500	1092K18	34.02
90° Angle			
1/8″ NPT Male × 1/8″ NPT Female	7,500	1092K27	79.63
1/8″ NPT Male × 1/8″ NPT Male	7,500	1092K16	69.79
1/2″-27 Male × 1/4″ NPT Male	5,000	1092K31	72.17

1/2″ NPT Male × 1/2″ NPT Male	5,000	1092K26	139.56
1/2″-27 Male × 1/4″ NPT Male	7,500	1092K11	71.00

Metering Grease Dispensing Nozzles

Rigid Nozzle

An LCD display allows you to precisely monitor the grease you dispense. These nozzles are great when you need to dispense a specific amount of grease or when you can't see how much grease you're dispensing. Measure batch total in oz. (resettable) and cumulative total in lb. (nonresettable).

Nozzles have a universal z-swivel fitting for connecting the inlet to your grease supply, and a coupler for standard grease fittings. Operate on two AA batteries (included). Inlet connection is 1/4″ NPT female; outlet connection is 1/8″ NPT female.

Nozzle Type	Max. psi		
6″ Rigid	7,250	2446K14	$515.42
12″ Flexible	7,250	2446K22	531.02

Grease Cups

Turn the lid clockwise to force grease down into the bearing. As grease is dispensed, cups compress slightly. Made of steel. Temperature range is 32° to 150° F. Use with NLGI Nos. 1-3 grease.

Cap., oz.	Thread Size, NPT male	Dia.	O'all Ht.		
0.25	1/8″	15/16″	1 5/8″	1112K41	$5.69
0.5	1/4″	1 3/16″	1 7/8″	1112K42	11.44

3.5	1/2″	2 11/16″	2 15/16″	1112K46	22.59

See-Through Automatic Grease Cups

With a transparent polycarbonate dome, these grease cups won't leave you wondering how much grease you have left. Cups come with three interchangeable springs, each with a different wire diameter. To achieve your desired flow rate, choose the most appropriate spring for the thickness of your grease.

Furnished with a 1/4″-28 straight thread grease fitting for refilling. Pipe size is 1/8″ NPT male. Temperature range is –10° to +250° F. Use with NLGI Nos. 0-4 grease.

Polycarbonate Base— An economical choice when there's minimal vibration, shock, or impact.

Aluminum Base— Strong enough to withstand vibration, shock, or impact.

Double-Plated Aluminum Base— Nickel and chrome plated for corrosion resistance.

	1-oz. Capacity					2-oz. Capacity					6-oz. Capacity

Heavy Duty Automatic Grease Cups

Made of steel to perform under rugged conditions. Cups are designed to feed slowly and to work with close- or tight-fitting bearings. They have a metering pin you can adjust to increase or decrease the feed rate. A stem at the top of the cup descends to show when it needs refilling.

Furnished with a 1/4″ NPT grease fitting for refilling, except 1110K22 has a 1/8″ NPT fitting. Temperature range is 32° to 180° F. Use with NLGI Nos. 1-3 grease.

Cap., oz.	Thread Size, NPTF male	Dia.	O'all Ht.		1-2	3-Up
0.5	1/8″	1 1/4″	4 3/16″	1110K22	$59.55	$53.39

8	3/4″	3 1/4″	9 3/4″	1110K25	205.04	184.19

For information about grease, see page 2170.

Ready-to-Use Automatic Grease Cups

Grease Cups

Whether you need a large quantity of grease or just a few drops, these automatic grease cups adapt to your application. They have a 4.25-oz. capacity and dispense a precise amount of grease over a set period of time (1 to 12 months). They're filled with NLGI No. 2 grease, eliminating the time and mess of filling. When the unit is empty, replace with a new one.

To use, screw the grease cup directly into the point of lubrication; no tubing or other connectors are needed. Grease cups are made of transparent polyamide and allow easy viewing of the grease level. Pipe size is 1/4″ BSPT male with a plastic fitting. Units are 2 1/8″ Dia. × 4 5/8″ Ht.

Time-Set Dial

Type of Grease	Type of Thickener	Temperature Range	Grease Color		1-2	3-Up

Adapter

Remote Grease Cup Filler Kit

No more climbing and reaching to fill your remote grease cups. This filler kit delivers grease to cups up to 10 ft. away. Kit includes 10 ft. of 1/4″ dia. nylon tubing, a 1/4″-28 grease fitting and adapter, two 1/8″ NPT male connectors, and a 1/8″ NPT female bulkhead nut and fitting. Temperature range is –10° to +180° F.

Optional adapter has a straight connection that is 1/8″ NPT female × 1/4″-28 male.

		1-5	6-Up
Kit	1395K25	$40.21	$36.25
Optional Adapter	1303K21	$3.45	

Pressure-Relief Vents

When pressure climbs into and beyond the ranges shown in the table, vents open to reduce pressure. They close as pressure drops within and below the pressure-relief range. All are made of steel. 1/8″ PTF vents meet Mil. Spec. 35670.

Pressure-Relief Range, psi	O'all Ht.	Hex Size	Pkg. Qty.		Each: Partial Pkg.	Each: Full Pkg.
1/8″ Pipe Thread Size (PTF)						
1/4 to 1	1/2″	7/16″	10	1093K11	$1.23	$1.05
1 to 5	1/2″	7/16″	10	1093K1	1.29	1.09

45 to 80	1/2″	7/16″	10	1093K63	3.87	3.22

Flow-Stop Grease Fittings

Stop grease flow to prevent over-lubrication and damage to bearing seals. These steel fittings positively shut off within the pressure ranges listed. As the pressure drops below its closing pressure the fitting reopens and grease flow can resume. Fittings have a 60° angle and a 1/8″ PTF male pipe thread.

Shut-Off Pressure, psi	O'all Ht.	Hex Size	Pkg. Qty.		Each: Partial Pkg.	Each: Full Pkg.
5 to 20	1″	5/8″	10	10425K15	$5.71	$5.00
60 to 110	1″	5/8″	10	10425K17	5.51	4.82

Bearing Grease Packers

Efficiently lubricate bearings without the mess of hand packing. These packers force out the old grease and replace it with your new grease. Include a dust cover.

Portable bearing packer is small enough for hand-held operation and strong enough to be used in a vise for more demanding applications. Made of polycarbonate and glass-filled polypropylene. Fill with bulk grease. Use with NLGI No. 2 grease.

Bench-mount bearing packer has a built-in fitting for connecting to your grease gun's coupler. Grease gun must have a 1/8″ NPT female connection. For larger bearing applications, mount directly to your workbench. The base plate is 6 1/2″ dia. and has three 1/4″ dia. mounting holes (mounting hardware not included). Made of steel. Use with NLGI Nos. 0-2 grease.

Portable

Bench Mount

	Bearing Size Range: Min. ID	Bearing Size Range: Max. OD		
Portable	3/4″	3 1/2″	8434K7	$26.88
Bench Mount	3/4″	6″	1074K9	119.45

Continuous Pressure-Relief Vents

Continuously vent excessive pressure from your bearing housings, gear boxes, and reservoirs. Vents are steel and have a 40-micron filter that prevents contamination.

Vents with deflector prevent fluid from splashing out of the vent hole.

Vent

Vent with Deflector

Thread Size, NPT male	Hex Size	Vents: O'all Ht.			Vents w/ Deflector: O'all Ht.

Hydraulic Bleeder System

Perform multiple maintenance tasks without compressed air or electricity. This hand-operated system lets you flush hydraulic fluid using pressure or vacuum; bleed clutches and brakes; bench bleed any master or slave cylinder; and meter and inject liquids. Maximum hydraulic injection pressure is 125 psi. Maximum vacuum is 30″ Hg. Injection stroke is 12.5 ml.

System comes furnished in a plastic case with fittings, adapters, and an instructional DVD. For use with D.O.T. (Department of Transportation) 3, 4, and 5 fluids.

6944A81 ..... $139.44

For information about pipe size, see pages 2-3.

About Grease Fitting Threads

In general, grease fitting threads follow pipe thread conventions and are either tapered or straight.

Tapered Pipe Threads

PTF and NPTF— Also known as Dryseal, these threads are tapered for leakproof installations. Compatible with NPT threads, but some leak-free characteristics are lost.

Metric and British Pipe Threads— Tapered in accordance with DIN standards established by the German Institute for Standardization and adopted by ISO (International Organization for Standardization).

Straight Threads

1/4"-28 Taper— Threads are tapered but they are designed to be installed into a 1/4"-28 straight threaded hole. Also known as SAE-LT threads (Society of Automotive Engineers Lubrication Threads).

UNF and UNEF— Similar to threads on a machine screw or bolt. They require a sealant, such as an O-ring, to minimize leakage.

Grease Fittings

Satisfy most general purpose lubrication requirements. All have a ball check to keep out dirt and other contaminants, unless noted. Max. pressure is 10,000 psi, unless noted. Threads are male, unless noted.

Steel fittings are zinc plated. ***Stainless steel***, ***brass***, and ***Monel*** fittings withstand corrosive conditions. Stainless steel is more corrosion resistant than brass; Monel is the most corrosion resistant.

Metric, BSPT, and ***BSF*** fittings meet DIN 71412 standards.

Self-Threading Leakproof Grease Fittings

Straight

90° Angle

65° Angle

45° Angle

Metric 90° Angle

Metric 45° Angle

Create a leakproof seal in untapped holes with these zinc-plated steel fittings, which form threads as you install them. Use a power or hand wrench to spin in fittings. If spun in, fittings have a maximum pressure of 10,000 psi, unless noted. You can also drive them in, but they aren't pressure rated under this installation method. Connections are male.

Metric 90° angle and 45° angle fittings have a square face; straight fittings have a hex face.

● Max. pressure is 8,000 psi.

Drive-In Grease Fittings

Drive these fittings into an untapped hole to speed production and reduce threading costs. All have a ball check, unless noted. Not rated for pressure.

Inch fittings have a serrated shank that forms a tight seal and prevents leaks, except 1102K82 and K83, which have a plain shank. ***Metric*** fittings have a plain shank.

Tools

For Straight Fittings

Tap these tools once or twice with a hammer to install fittings.

		Each
For Straight Fittings	2318K19	$22.91
For Angle Fittings	2318K29	24.62

For information about pipe size, see pages 2-3. For information about grease fitting threads, see page 2188.

Button-Head Grease Fittings

For a quick, positive grip, choose these rugged button-head fittings.

Inch zinc-plated steel fittings have a plunger-style check valve to allow for greater grease flow than other fittings. ***Inch stainless steel*** fittings have a ball check.

Metric and ***BSPP*** fittings meet DIN 3404 standards.

Flush-Style Grease Fittings

Where protruding fittings won't work, choose these zinc-plated steel flush-style fittings. Maximum pressure is 10,000 psi.

Install *Styles A* and *B* with a slotted screwdriver; *Styles C, D,* and *E* with a hex wrench. Tap in *Style F.*

Metric fittings meet DIN 3405 standards.

Grease Fitting Blocks for Hard-to-Reach Areas

Attach tubing to these blocks for easier lubrication of hard-to-reach and remote machine bearings. One side of each block has 3, 6, or 10 grease fittings, and the opposite side has compression-fitting connections for 1/4" OD tubing (not included). Overall block depth is 3/4". Use with grease up to NLGI No. 2.

Maximum pressure is 10,000 psi for zinc-plated steel blocks; 9,000 psi for stainless steel blocks.

Oilers

Whether you need a steady stream or just a drop of oil, these versatile oilers meet your lubricating needs. Squeeze the lever to dispense oil. Oiler bodies are steel.

Standard—*Super-flexible spouts* are made of wire-reinforced polypropylene and bend to deliver oil in any direction. They have a brass tip and M6 male threads. *Flexible spouts* are steel with a zinc tip and have 1/4″-28 male threads. *Straight-rigid* and *angled-rigid spouts* are steel with an aluminum tip. Threads are 1/4″-28 male.

Easy Fill— A separate filler cap makes refilling these oilers fast, clean, and easy. All spouts are steel and have 13/32″-24 male threads. *Flexible spouts* have a zinc tip. *Straight-rigid* and *angled-rigid spouts* have a brass tip.

Large-Capacity Oilers

Minimize refilling time during big oiling jobs, such as filling large oil cups and reservoirs. Made of steel.

	Cap., oz.	Spout		
Standard	64	6¼″ Angled Rigid	1390K11	$49.71
With Handle	64	6¼″ Angled Rigid	1390K12	67.80

Air-Powered Easy-Lube Oilers

Connect to your shop air supply and pull the trigger to effortlessly deliver oil. Adjust the spout tip to modify the spray volume. A brass knob on the handle adjusts the spray pattern from medium to fine mist.

Made of aluminum with a brass tip. Air inlet connection is 1/4″ NPT female. Operates on 80 to 120 psi.

Cap., oz.	Spout		
32	12″ Straight Rigid	13945K41	$92.11

Economy Oilers

Push the bottom of these simple oilers to dispense oil with ease. Body is steel; spout is zinc-plated steel.

Flexible spout has a zinc tip.

Cap., oz.	Spout		
12	4½″ Straight Rigid	1258K71	$5.91
12	7″ Flexible	1258K72	6.09

Easy-Lube Oilers

6-oz. with Super-Flexible Spout ***6-oz. with Angled-Rigid Spout*** ***16-oz. with Flexible Spout*** ***10-oz. with Angled-Rigid Spout***

Simply squeeze the trigger to operate these oilers. Made of steel.

Standard— Deliver a single drop or solid stream of oil.

Adjustable Spray— Tighten the aluminum tip for a fine mist of oil; loosen it to deliver a solid stream.

Super-flexible spout is made of wire-reinforced polypropylene and bends in any direction. *Angled-rigid spouts* are steel. *Flexible spouts* are zinc-plated steel.

Precision Oilers

Apply lubricant in tight spaces with the push of a button. This all-aluminum oiler has a needle-like spout, convenient pocket clip, and cap. Overall length is 5⅝″.

Cap., oz.	Spout Lg.		
1.5	1½″	9044T7	$10.31

Sheet Stock Oilers

Oilers lubricate both sides of metal sheet stock before stamping or forming to extend die life and ensure high quality. Made of steel.

Oilers for up to 2½″ Wide and 4″ Wide Sheet Stock

Oiler for up to 2½″ Wide Stock

Clip these oilers directly to sheet stock; their two felt pads spread lubricant evenly. Use for sheet stock up to 0.104″ thick as well as wire. Mount either horizontally or vertically.

Oiler for sheet stock up to 2½″ wide has four 0.1″ ID tube connections.

Oiler for sheet stock up to 4″ wide has eight 0.1″ ID tube connections.

Optional reservoir is polyethylene and has eight feed points and eight 6-ft. polyurethane feed tubes with adjustable flow. Capacity is 1 gal.

Max. Sheet Stock Width	Overall Size Lg.	Wd.	Dp.		Each
2½″	5″	¾″	3″	2277K1	$23.33
4″	6½″	¾″	3″	2277K2	26.38
Optional Reservoir				2277K3	116.67

Oilers for up to 8″ Wide Sheet Stock

Two carpet-covered rollers lubricate sheet stock up to ¼″ thick. Top roller is fed by a 32-oz. reservoir with a drip tube; bottom roller picks up lubricant from a pan below.

Oiler with valve has an overflow valve in the bottom pan to prevent excess lubricant from spilling.

Optional stand extends from 24″ to 42″ high.

Replacement rollers handle oils, soluble oils, and low pH (acidic) lubricants. *Optional heavy duty rollers* work well with high pH (alkaline) lubricants. *Optional vinyl rollers* can be used to apply a very thin coating, such as vanishing oil.

Optional wipers control the amount of lubricant on sheet stock.

Overall Size Lg.	Wd.	Ht.	Oiler	Each	Oiler with Valve	Each
10½″	4½″	13¾″	1354K11	$181.59	1354K51	$212.03

Optional Stand	1354K85	Each	$176.91
Replacement Rollers	1354K41	Pair	$33.09
Optional Heavy Duty Rollers	1354K71	Pair	48.36
Optional Vinyl Rollers	1354K81	Pair	66.18
Optional Wipers	1354K31	Pair	21.64

Oil-Dispensing Guns

18 oz.

26 oz.

When you need to use oil to lubricate bearings or fittings, these guns work just like grease guns. They have a steel barrel and lever and include a coupler for standard grease fittings.

Cap., oz.	Strokes per oz.	Max. psi	Nozzle Type		
18	15	5,800	6¾″ Rigid	1879K48	$81.20
26	7	1,800	6⅝″ Rigid	1879K21	164.33
Replacement Coupler				1879K23	6.98

No-Drip Oil-Dispensing Nozzles

Without Meter Angled-Rigid Nozzle

With Meter Flexible Nozzle

A safety lock on the handle prevents spills and accidental dispensing. Use these nozzles with motor oil, gear oil, and transmission fluid. Each has a ½″ NPT female swivel inlet connection that attaches to your bulk oil delivery system. Outlet connection is ¼″ NPT female.

Nozzles with meter have an LCD that registers in pints, quarts, gallons, or liters and totalizes in gallons or liters (up to 999.99). Meter is powered by a 3.6-volt ½ AA lithium battery (included).

Nozzle Type	Without Meter Max. psi			With Meter Max. psi		
11″ Angled Rigid	2,000	2254K21	$102.00	1,000	2254K23	$489.46
14″ Flexible	2,000	2254K22	112.14	1,000	2254K24	487.24

Replacement Nozzle Tip	2254K31	$12.02
Replacement ½ AA Lithium Battery	6951K59	5.19

Oil-Removal Guns

Flexible Steel

Super-Flexible Vinyl

Produce a strong suction to remove old lubricant from gear cases, transmissions, and differentials. You can also use these steel guns for transferring and adding fluid lubricants.

Cap., oz.	Nozzle Type		
12	10″ Flexible Steel	1050K11	$21.22
16	12″ Super-Flexible Vinyl	1061K11	10.25

Oil-Dispensing Pumps

Cover Pump (Container Not Included)

Self-Contained Pump

Dispense lubricants right at your job site with these mobile, easy-to-fill pumps. Pumps are perfect for neat and fast refilling of transmissions, differentials, and gear cases. All components are steel. Pump head and lid are red powder-coated; handle is zinc plated.

Cover pump dispenses oil and clamps directly onto a 5-gal. container (not included). It includes a cover assembly with a 5-ft. rubber delivery hose with a curved nozzle. For grease containers, see pages 1707-1708.

Self-contained pump dispenses grease rated up to NLGI No. 3 and oil. Includes a 3.7-gal. capacity steel container and a 5½-ft. nitrile delivery hose with a curved nozzle. It is 17⅛″ high and has a 7⁵⁄₁₆″ wide base.

Pump Style	Output, oz./stroke	Container		
Cover	2.6	No	1318K16	$63.76
Self Contained	1.0	Yes	1002K11	479.60

Air-Powered Oil-Dispensing Pumps

Drum Not Included

Pneumatic power lets you quickly and conveniently dispense motor oil, gear oil, and transmission fluid from 55-gal. drums (not included). Pump is made of cast aluminum and polyurethane. It includes an air regulator and gauge, 6-ft. long Buna-N rubber air hose with ⅜″ NPT male connection, 6-ft. long nitrile oil hose with ½″ NPT male connection, and a bung adapter with a 2″ NPT male connection for mounting on a drum.

Air inlet: ⅜″ NPT female. Air inlet pressure: 40-180 psi. Air volume @ 100 psi: 8.5 scfm. Oil outlet: ½″ NPT female. Maximum oil pressure: 540 psi. Flow rate: 2 gpm.

For drums, see pages 1712-1713.

Fits Container		
55-gal. Drum	2332K5	$952.36

Lubrication Manifolds

4 Feeds

Simultaneously deliver equal lubrication to multiple points. Connect the included tubing to the lubrication points for access to remote and hard-to-reach areas. Manifolds work with grease rated up to NLGI No. 2 and oil.

Inlet and outlet feeds are ⅛″ NPT female. Tube fittings are ¼″ and made of brass. Manifolds are corrosion-resistant die cast aluminum alloy. Furnished with 6 ft. of nylon tubing and steel tube clamps with self-tapping mounting screws.

No. of Feeds	Overall Size Ht.	Wd.	Dp.	Max. psi

About Oil-Hole Covers and Oil Cups

Oil-hole covers and oil cups are convenient and dependable ways to apply oil to parts in hard-to-reach areas. Install them on machinery, motors, bearings, blocks, and all kinds of moving parts. They have a self-closing hinged cover (unless noted) that keeps contaminants out of your oil and equipment. ***Oil-hole covers*** do not hold oil. Any oil poured in the cover passes into the part to be lubricated. ***Oil cups*** have a reservoir that holds oil. Oil that is poured in the cup is held in the reservoir and passes through gradually. For this reason, we list a capacity for all of our oil cups. The advantage of oil cups is that they decrease the frequency of manual lubrication.

Choose from drive-in and threaded styles. ***Drive-in*** covers have plain walls and are designed to be lightly tapped into a hole. ***Threaded*** covers and cups provide a more secure fit. There are several different thread types: NPT is National Pipe Taper; UNF is Unified National Fine; and UNEF is Unified National Extra Fine.

Installation clearance is a measurement that represents the overall diameter of the path of a cover or cup as you rotate it into place on your machinery.

Straight (Top View) *Elbow (Front View)*

Oil-Hole Covers

Drive-In

Threaded

Made of zinc-plated steel, unless noted. Connections are male.
Drive-in covers have a tapered shank that controls insertion depth.

●Nickel-plated steel. ■Nickel-plated brass.

Easy-Fill Oil-Hole Covers

Drive-In

Threaded

Fill your equipment with oil without lifting a hinged cover. These low-profile covers have a self-closing ball valve. When you're ready to fill, the pressure of your oil container easily depresses the ball.

Drive-in covers are zinc-plated steel. ***Threaded*** cover is zinc-plated brass. Connection is male.

Elbow-Style Oil-Hole Covers

Drive-In

Threaded

Choose elbow-style covers for side-mounted applications and for lubricating equipment where you don't have enough vertical clearance for straight covers. All covers are die cast zinc.

Threaded covers have male connections.

Oil Cups

Straight

Straight Wick-Feed

Elbow

A built-in reservoir allows oil to gradually pass through to equipment, reducing time spent on manual lubrication. Cups are zinc-plated steel and have NPT male connections.

Straight wick-feed oil cups protect bearings from dust and foreign matter. The wick extends through the threaded connection of the cup and keeps the bearing moist, even after the oil cup is drained.

Elbow style is for side-mounted applications and where vertical space is limited.

About Oil Reservoirs

Oil reservoirs serve as a central dispenser for lubrication systems.

Adjustable-Flow Oil Reservoirs— Adjust the oil flow from a drop to a steady stream. Some of these oil reservoirs have special features such as multiple outlets, brushes for chain lubrication, and a solenoid to start oil flow when equipment starts running and to stop oil flow when equipment stops.

Constant-Level Oil Reservoirs— Used primarily on equipment that requires a constant supply or bath of oil.

Outlet Connections— Many of our reservoirs and sight-flow needle valves have outlets with NPTF or PTF pipe threads (also known as Dryseal). Connections prevent leaks and ensure pressure-tight joints without a lubricant or sealer. They connect to NPT threads but may lose some of their leakproof qualities.

Oil Reservoirs

Reservoirs have aluminum top and bottom plates around a clear plastic bowl and a self-closing fill cap. When using these reservoirs in flow-regulating applications, they require a sight-flow needle valve (sold separately on page 2198). Maximum temperature is 140° F.

Pressure-Equalizing Oil Reservoirs

A venting tube equalizes pressure between the reservoir and bearing so you can lubricate non-vented, closed, and sealed bearing housings while keeping out contaminants. A ball check valve below the sight chamber prevents sudden back pressure from affecting flow. Turn on and off using the toggle switch on top of the unit.

Reservoirs have aluminum top and bottom plates around a clear acrylic bowl and include a fill cap. When using them in flow-regulating applications, they require a sight-flow needle valve (sold separately on page 2198). Maximum temperature is 160° F.

High-Temperature Oil Reservoirs

Made of polycarbonate, these reservoirs withstand temperatures up to 225° F. They include a self-closing fill cap. When used in flow-regulating applications, they require a sight-flow needle valve (sold separately on page 2198).

Reservoirs ***with filter*** have an aluminum filter with Type 304 stainless steel wire cloth. Filter is 100 mesh (100 openings per linear inch of mesh) and removable. For information about mesh openings and particle filtration, see page 390.

High-Temperature Large-Capacity Oil Reservoirs

5-Gallon Capacity

A high maximum temperature of 250° F combined with large capacity makes these reservoirs suitable for circulating oil systems and hydraulic power units.

Reservoirs are heavy duty steel. They have a 40-micron filter built into their removable fill/breather cap and include a liquid-level gauge. When using them in flow-regulating applications, they require a sight-flow needle valve (sold separately on page 2198). Outlet is 1/2" NPT female. Mounting fasteners not included.

1- and ***2-gallon reservoirs*** have four 11/32" dia. mounting holes. ***5-*** and ***10-gallon reservoirs*** contain a baffle that prevents surging or sloshing of return fluid. They have four 17/32" dia. mounting holes.

Adjustable-Flow Oil Reservoirs

The precision needle valve on top of these reservoirs allows you to adjust the flow rate using the attached toggle switch. Reservoirs have aluminum top and bottom plates around either a clear plastic or glass bowl and include a vented fill cap. A sight glass allows you to view the flow. Maximum temperature is 160° F for the plastic bowl and 250° F for the glass bowl.

Direct Mount— Thread directly into bearing housings, pumps, and other machinery.

Remote Mount— Connect a pipe or tube fitting to reach remote or isolated equipment. Furnished with a nut and washer for mounting.

For information about oil reservoirs and threaded connections, see page 2195.

Electric Adjustable-Flow Oil Reservoirs

A solenoid valve is closed unless energized (normally closed) and dispenses lubricant only while equipment is running so there's no need to manually control flow. The sight-flow needle valve controls flow rate. Reservoirs have aluminum top and bottom plates around a clear plastic bowl, and a vented cap. Valve has a 1/4″ OD tube outlet. Mounting threads are 5/8″-18 UNF male. Maximum temperature is 160° F.

120 VAC reservoirs draw 0.1 amps.

24 VDC reservoirs draw 0.4 amps.

Add-On Multiple-Outlet Adjustable-Flow Oil Reservoirs

Additional Valve

Customize these reservoirs to the number of outlets you need. Each includes two adjustable sight-flow needle valves to control flow rate, and will accommodate up to 22 additional valves (sold separately). Sight-flow valves interlock and seal with one another to form a multiple-outlet lubrication system. Reservoirs include a fill cap, vented sight, and clear plastic bowl. Turn flow on and off with the manual toggle switch at the bottom of the reservoir. Each valve has a 1/4″ OD tube outlet. Mounting threads are 5/8″-18 UNF male. Maximum temperature is 225° F.

Multiple-Outlet Adjustable-Flow Oil Reservoirs

Manual Toggle Switch with 2 Outlets

Electric with 4 Outlets

Serve multiple lubrication points from a single location with these reservoirs. They have aluminum top and bottom plates around a clear plastic bowl, a vented fill cap, and an adjustable sight-flow needle valve to control flow rate. Needle valve has a 1/4″ OD tube outlet. Mounting threads are 5/8″-18 UNF male. Maximum temperature is 140° F.

Manual Toggle Switch— Turn on and off with the switch on top of the reservoir. **To Order:** Please specify number of outlets. **Also Available:** Reservoirs with up to 30 outlets. Please ask for 1067K999 and specify number of outlets and capacity.

Electric— A solenoid valve is closed unless energized (normally closed) and dispenses lubricant only while equipment is running so there's no need to manually control flow. **To Order:** Please specify number of outlets and 120 VAC or 24 VDC (except 1065K5 with three outlets, which is AC only). 120 VAC reservoirs draw 0.1 amps; 24 VDC reservoirs draw 0.4 amps. **Also Available:** Reservoirs with up to 30 outlets and other voltages. Please ask for 1065K999 and specify number of outlets, capacity, and voltage.

Even-Coat Adjustable-Flow Oil Reservoirs

Manual Toggle Switch

Electric

The flat nylon brush attached to these reservoirs ensures even oil application. Reservoirs have aluminum top and bottom plates around a clear plastic bowl, and a vented fill cap. Brush is 1 1/2″ wide with 1 5/32″ long bristles. Mounting threads are 5/8″-18 UNF male, unless noted. Max. temperature is 140° F.

Manual Toggle Switch— Turn on and off with the switch on top of the reservoir. A sight glass allows you to view the flow.

Electric— Flow is controlled by a solenoid valve that is closed unless energized (normally closed), eliminating the need to manually control flow. Flow rate is adjusted with a sight-flow needle valve. 120 VAC draws 0.1 amps; 24 VDC draws 0.4 amps.

Constant-Level Oil Reservoirs

Vented System With Optional Wire Guard

Closed System

When oil falls below the set level, these reservoirs replenish the supply for proper lubrication. Great for use in a pump bearing housing, gearbox, and other oil sump applications. Body is die cast zinc. Connections are 1/4″ NPT female. Max. temperature is 250° F for the glass bowl and 165° F for the clear plastic bowl.

Vented-system reservoirs have multiple air vents for pressure balancing. ***Closed-system*** reservoirs don't require venting, reducing exposure to contaminants.

For information about oil reservoirs and threaded connections, see page 2195.

Air-Powered Oil Reservoirs

Quickly and conveniently apply oil without the work that manual pumps require. These air-powered reservoirs dispense lubricant through a spray valve (sold separately). Air pressurizes the lubricant and atomizes the spray.

Reservoirs have dual regulators that control the pressure of the lubricant and the atomized spray. They have a clear acrylic bowl with aluminum top and bottom plates, and include a 40-micron filter to prevent valve blockage. Air inlet and outlets are 1/4″-18 NPTF female. Outlet is 1/8″-27 NPTF female. Maximum inlet air pressure is 125 psi, and maximum regulated air and fluid pressure is 30 psi. Maximum temperature is 140° F. Tubing and tube fittings are not included.

Reservoirs

Spray Valve	12745K71	$85.22	12745K72	$85.22

Lubrication and Coating Brushes

In addition to lubricants, these brushes can also apply paint, sealers, and coatings. They include a feed tube that extends into the 1″ long bristles. Maximum temperature is 400° F for brushes with horsehair bristles and 250° F for brushes with nylon bristles. Brushes have a 1/8″-27 NPS female connection.

Standard—Brush coats wide surfaces uniformly.

Precision—Tube extends farther into the brush for a more controlled, precise application.

Rotating Lubrication Brushes

Without Valve

With Valve

As chain or equipment moves, these brushes rotate to lubricate and clean at the same speed.

Brushes have a steel bracket with a 5/16″ dia. hole for mounting (brushes with valve include mounting fasteners). Oil flows to the brush via a 1/4″ OD tube inlet connection. Maximum temperature is 250° F for nylon brushes and 400° F for Type 304 stainless steel brushes.

Without Valve—Inlet connection is on top.

With Valve—Fine tune flow. Valve is brass with a 5/16″-18 UNC male mounting stud and a side inlet connection.

Replacement brush inserts come in packs of 2.

Lubrication Brushes

In addition to lubricating chain, use these brushes to lubricate gears and conveyors. Brushes with Type 304 stainless steel bristles provide excellent cleaning capability in harsh environments and longer life.

(A) Standard Brushes—Bristles are 1 5/16″ long. Housing is zinc. Maximum temperature is 160° F.

(B) Brushes with No-Drip Pad—A neoprene cover over a 5/8″ long felt pad provides even lubrication coverage without dripping. Housing is zinc. Maximum temperature is 200° F.

(C) Brushes with Internal Reservoir—An internal reservoir directs lubricant flow to the interior of the brush for even distribution. Bristles are 1 1/4″ long. Housing is zinc. Maximum temperature is 160° F.

(D&E) Brushes for Remote Installation—Designed for applications where flow can't be adjusted at the point of lubrication. To adjust flow, use with an adjustable oil reservoir or with a sight-flow needle valve. Brushes have 1/2″-20 UNF male mounting threads (unless noted) and 1 1/8″ long bristles. Housing is aluminum. Maximum temperature is 250° F. *Replacement brush inserts* are a strip of bristles that fit in your existing brush housing.

(F-H) Brushes with Sight-Flow Valve—Turn the valve wheel to adjust flow. Choose straight for chains and equipment travelling horizontally and 45° angle for chains and equipment travelling vertically. Brushes have 1/2″-20 UNF male mounting threads (unless noted) and 1 1/8″ long bristles. Housing and valves are aluminum. Maximum temperature is 250° F. *Replacement brush inserts* are a strip of bristles that fit in your existing brush housing.

■ Two required.

Sight-Flow Needle Valves

Install these gravity-flow valves inline so you can check and adjust flow rate. A glass window allows you to view the flow. Maximum pressure is 125 psi.

One- and ***two-inlet*** valves have a knurled knob that enables smooth, accurate flow adjustment. Temperature range is –30° to +250° F. *Straight* valves are brass. *90° angle* valves are aluminum.

Three-inlet valves have a T-handle that adjusts flow rate. Temperature range is –15° to +225° F. Made of gold-anodized aluminum.

Electric Sight-Flow Needle Valves

A built-in solenoid in these brass valves is closed unless energized (normally closed), so it dispenses lubricant only while equipment is running. A knurled knob allows you to adjust the flow rate.

Valves are designed for use with oil reservoirs. They operate on 120 VAC; motor draws 0.1 amps. Temperature range is –30° to +250° F. Not rated for pressure.

Inlet, female	Outlet, male	O'all Ht.

Sight-Flow Needle-Valve Manifolds

4 Valves

There's no need for each machine to have an individual oil reservoir. Just attach these valves to your reservoir and lubricate multiple sites from a single location. Each valve has an adjustable flow and can be removed for cleaning without disturbing the rest of the system.

Valves are made of aluminum. Inlet is 1/4″ NPTF female. Outlet is 1/4″ OD tube. Mounting threads are 5/8″-18 male. Temperature range is –30° to +250° F.

For Vented Oil Reservoirs— Not rated for pressure.

For Closed Systems— Maximum pressure is 125 psi.

Precision Lubrication Systems

2 Pump Electric

4 Pump Air Powered

Ready to install, these complete systems have an adjustable flow rate for precise lubrication. They're for use with oil and include a pump, timer, and a reservoir with plastic bowl between top and bottom plates.

Components are mounted on a 10 3/4″ Ht. × 10 7/8″ Wd. galvanized steel panel that has four 3/16″ dia. holes with standoffs and four 1/4″ × 3/8″ slots for mounting (fasteners not included). If your application requires additional protection for this panel, you can mount it in a NEMA enclosure (not included; see pages 843-852). All systems require a 120 VAC power supply and have screw terminals for electrical connections. Lubrication outlet is 1/8″ NPT female. Systems draw 0.06 amps.

Electric systems cycle from 1 to 1,440 times per day. Pump output is adjustable from 0 to 0.005 oz. per cycle. Set pump flow rate using a spanner wrench. Temperature range is –15° to +120° F.

Air-powered systems have a solenoid valve and 1/8″ barbed tube fittings for 1/4″ OD air inlet tube. Required air pressure is 40 to 120 psi. Systems cycle from 1 to 72,000 times per day. Pump output is adjustable from 0 to 0.007 oz. per cycle. Set pump flow rate using a screwdriver. Temperature range is –15° to +180° F.

No. of Pumps	Cap., oz.	Max. psi

Air-Powered Modular Lubrication Pumps

Two Pumps with Spray Nozzle

Add-On Pump with Spray Nozzle

Modular design allows you to easily add pumps as your lubrication requirements change. Each pump has an adjustable flow from 0 to 0.007 oz. per cycle. Set the flow rate using a screwdriver. *Note:* For proper operation, pumps require a three-way solenoid valve (sold separately on page 473). The solenoid can be controlled by a timer or PLC (programmable logic controller). Pumps are made of aluminum and have brass fittings. Pump size is 4″ Ht. × 1 1/8″ Dp. Required air pressure is 40 to 120 psi. Maximum outlet pressure is 1,080 psi. Lubrication inlet, air inlet, and lubrication outlet are 1/8″ NPT female. Each pump has 9/32″ dia. mounting holes (fasteners not included). Temperature range is –15° to +180° F. Pumps ***with spray nozzle*** provide a broader dispensing pattern. Nozzle flexes and stays in position. It's made of zinc-plated steel and includes an 8″ long copper hose.

Oil/grease pumps are for use with oil and grease up to NLGI No. 2.

Grease pumps are for use with grease up to NLGI No. 2. Pumps have a 1.5-oz. capacity reservoir with a clear plastic bowl between aluminum top and bottom plates. Reservoir is 4″ high.

Central Lubrication Pumps

Dispense a fixed amount of lubricant with these pumps, which deliver 0.27 oz. of lubricant to single or multiple lubrication points. Reservoir is aluminum and includes a plastic liquid-level gauge. Outlet is 5/16″-24 female. Temperature range is 32° to 120° F. Use with oil. To control flow to each lubrication point, use a metering valve (sold separately on this page).

Vertical pump dispenses lubricant when you pull the handle. Reservoir requires 56 pulls to empty. Pump has four 15/64″ dia. mounting holes (fasteners not included).

Horizontal pumps dispense lubricant when you release the handle. Reservoir requires 69 handle releases to empty. Pumps have three 15/64″ dia. mounting holes (fasteners not included). Pumps come with a handle on the left or right side.

Vertical

Horizontal with Left Side Handle

Handle Position	Cap., oz.	Max. psi	Size Ht.	Size Wd.	Size Dp.

Right Side	19	50	4 31/32″	3 5/32″	9 1/4″	2287K9	233.96

Metering Valves for Central Lubrication Pumps

For precise distribution of lubricant to all of your lubrication points, choose these metering valves. Valves are 1″ long with a 7/16″ hex size and are made of brass. Temperature range is 32° to 120° F.

Each flow rate listed allows about twice the flow of the next smaller size. For example, 0 has twice the flow rate of 00. In addition, the amount of lubricant that's delivered to each point depends on the total number of lubrication points and the flow rate of the metering valves used. **To Order:** Please specify flow rate.

Inlet, male	Outlet, male	Available flow rates	Max. psi		
5/16″-24	5/16″-24	00, 0, 1, 2, 3, 4, 5	200	2293K11	$11.64
5/16″-24	1/8″ NPT	00, 0, 1, 2, 3, 4, 5	200	2293K12	11.64
1/8″ NPT	1/8″ NPT	00, 0, 1, 2, 3, 4, 5	200	2293K13	11.64

Electric Central Lubrication Pumps

Automatically dispense a variable amount of lubricant at a specified time with these pumps. They have transparent plastic reservoirs and a low-level switch that triggers an audible alarm. The switch also can be wired to additional alarms. Pumps operate on 110 VAC and have screw terminals for wiring. Outlet is 5/16″-24 female. Motor draws 0.03 amps. Temperature range is 32° to 120° F. Pumps have two 15/64″ dia. mounting holes (fasteners not included). Use with oil. To control flow to each lubrication point, use a metering valve (sold separately on this page).

Fixed interval pump dispenses lubricant at set increments of time. You can adjust the amount that's dispensed each interval from 0.1 to 0.2 oz. per cycle.

To Order: Please specify one of the following dispensing intervals: 3, 5, 10, 15, 30, or 60 minutes.

Variable interval pump lets you digitally control the time period over which the amount of lubricant is dispensed (adjusts from 1-180 seconds) and the interval time between cycles (adjusts from 3-999 minutes). Maximum dispensing rate is 0.11 oz. per second.

Fixed

Variable

Stay-Put Flexible Metal Coolant Hose

Made of high-tensile-strength spring steel, these rugged hoses bend easily to any position and stay there. Hoses have a brass NPT male fitting on one end and a standard nozzle on the other. Connection, hose ID, and nozzle ID are the same size, except the 3/8″ NPT hose which has a 5/16″ nozzle ID. Not rated for pressure or temperature.

Corrosion-Resistant Stay-Put Flexible PVC Coolant Hose

Bend, twist, and set these hoses to stay where you want. Made of one-piece flexible black PVC with a zinc-plated steel rod along the inside wall for rigidity, they're impervious to sulfur-based cutting oils. Hoses come with a brass NPT male fitting on one end and a Type 304 stainless steel nozzle on the other. Maximum pressure is 55 psi. Maximum operating temperature is 180° F.

Coolant Hose

For coolants, see page 2178.

About Any-Which-Way Coolant Hose

Assemble and disassemble Any-Which-Way coolant hose by snapping components together or pulling them apart. This can be done by hand, but ***assembly pliers*** and ***separation tools*** (sold separately) make the task easier.

Note: To ensure compatibility, select the hose and component color that matches your current system.

Loc-Line Any-Which-Way Coolant Hose

Custom build your own system to deliver coolant, cutting oils, water, and air in almost any direction. Once in position, hose stays put—there's no spring back or wandering caused by vibration. Made of acetal. Maximum operating temperature is 170° F.

(1) Hose assemblies have a hose, connectors, and round nozzles.

(16) Circular nozzle assemblies surround your cutting tool with 15 nozzles that can be precisely aimed to remove chips and debris.

(26) Motion-reducing extensions not only reduce motion at higher pressures, but also reduce sagging in longer lines.

(27) Bracket-mount manifolds have one inlet, four outlets, and two 1/4″ dia. mounting holes (fasteners included). Expand with ***(20) tee inline connectors*** (sold separately).

(28) Magnetic-base manifold has one inlet, four outlets, and a 25-lb. holding force. It also has 1/4″ NPT female connections and comes with three 1/4″ plugs and one 3/8″ barbed connector. Expand with ***(19) wye inline connectors*** (sold separately).

(29) Assembly pliers make it easier to connect your Any-Which-Way coolant hose to the components.

1/4″ ID (0.64″ OD)—Max. pressure is 30 psi. Max. flow rate is 250 gph.

Cold-Air Coolant Guns

Replace messy mist systems and eliminate the need to clean coolant off your parts. Cold-air guns convert your filtered shop air into a stream of cold air using a vortex tube. Guns have no moving parts and need no electricity to provide a continuous cold air supply. All have a magnetic base. Guns require 80 to 100 psi air pressure and use 15 scfm @ 100 psi.

Standard guns produce air 50° F below the shop air you're using. Vortex tube is stainless steel with an aluminum housing. Any-Which-Way flexible acetal hose, cone nozzle, flat fan nozzle, and filter separator are included. Air inlet connection is 1/4″ NPT male.

With the *dual-hose model*, you will get an additional cone nozzle and flat fan nozzle.

Adjustable guns produce air as cold as 100° F below the shop air you're using. Adjust cooling temperature using the knob on the back of the unit. Vortex tube and housing are aluminum. Any-Which-Way flexible acetal hose, cone nozzle, and 5-micron auto-drain filter are included. Air inlet connection is 1/4″ NPT female.

With the *dual-hose model*, you will get an additional cone nozzle.

	Gun Size Dia.	Lg.	Hose Lg.		
Standard					
Single Hose	1 1/2″	10″	11″	1382K12	$292.14
Dual Hose	1 1/2″	10″	11″	1382K22	306.22
Adjustable					
Single Hose	1 3/4″	10 5/8″	8 1/2″	11215K42	383.16
Dual Hose	1 3/4″	10 5/8″	9″	11215K52	393.68

For coolants, see page 2178. For information about Any-Which-Way coolant hose, see page 2200.

Snap-Loc Any-Which-Way Coolant Hose

Custom build your own system to deliver coolant, cutting oils, water, and air in almost any direction. Once in position, hose stays put—there's no spring back or wandering caused by vibration. Made of acetal, unless otherwise indicated or noted. Maximum operating temperature is 200° F.

(1) Hose assemblies have a hose, connectors, and round nozzles.

(12) Magnetic-base manifold has one inlet, one outlet, and a 38-lb. holding force. It also has ¼″ NPT female connections. Expand with ***(10) wye inline connectors*** (sold separately).

(13) Bracket-mount manifold has ports for two ½″ NPT male and three ⅜″ NPT male connectors. Bracket is zinc-plated steel and has four ¼″ mounting holes (fasteners included).

(14) Assembly pliers make it easier to connect your Any-Which-Way coolant hose to the components.

(15) Separation tool makes it easier to disconnect the components from your Any-Which-Way coolant hose.

¼″ ID (0.63″ OD)—Max. pressure is 39 psi. Max. flow rate is 240 gph. Components indicated with a ▲ are made of polypropylene.

For coolants, see page 2178. For information about Any-Which-Way coolant hose, see page 2200.

Loc-Line Acid-Resistant Any-Which-Way Coolant Hose

Alcohols, aromatic solvents, gasoline, grease, hydrocarbons, oil, salt solutions, and acids are no problem for this polyester hose. Custom build your own system to deliver coolant, cutting oils, water, and air in almost any direction. Once in position, hose stays put—there's no spring back or wandering caused by vibration. Maximum operating temperature is 180° F.

(1) Hose assemblies have a hose, connectors, and round nozzles.

(12) Assembly pliers make it easier to connect your Any-Which-Way coolant hose to the components.

¼″ ID (0.64″ OD)—Max. pressure is 30 psi. Max. flow rate is 250 gph.

Mist Coolant Dispensers and Dust Removers

You get two air-powered tools in one—a mist coolant dispenser to dissipate heat from short and intermittent machine cycles, plus a dust and shavings remover. Press the lever to stop the coolant flow and start a high-velocity stream of air. Designed for use with oil- and water-based coolants, dispensers include a 6-ft. long siphon line, a flexible plastic coolant hose with medium-spray aluminum nozzle, and a magnetic mounting base. Coolant reservoirs are not included. Air inlet is ¼″ NPT female. Pressure range is 12 to 100 psi.

Dispenser with 12″ Hose Assembly	**1333K11**	$126.42
Dispenser with 20″ Hose Assembly	**1333K12**	133.96
Replacement 12″ Hose Assembly	**1333K24**	29.73
Replacement 20″ Hose Assembly	**1333K26**	33.79
Replacement Medium-Spray Aluminum Nozzle	**1333K43**	44.85
Optional Fine-Spray Aluminum Nozzle	**1333K41**	44.88
Optional Coarse-Spray Aluminum Nozzle	**1333K45**	44.88

Reservoir Fluid Extractors

To make it easy to empty reservoirs and tanks, pair your compressed air with the powerful venturi vacuum of this extractor. It's made of durable, chemical-resistant polyethylene to handle a variety of coolants, gear oil, engine oil, and brake fluids. Extractor has an automatic shut-off to prevent overfilling, a separate air shut-off valve, and a quick-drain pour spout.

Furnished with 0.23″ OD × 5-ft. long, 0.26″ OD × 5-ft. long, and 0.41″ OD × 5-ft. long tubing with tubing adapters. You'll also get a brake/clutch bleeding kit to vacuum bleed hydraulic braking systems. Reservoir capacity is 2.3 gallons. Overall size is 25½″ Ht. × 13″ Wd. × 9½″ Dp. Air inlet is ¼″ NPT female. Pressure range is 60 to 120 psi. Maximum operating temperature is 175° F.

3391T1 ..... $149.22

For coolants, see page 2178.

Adjustable Coolant Nozzles

Position these nozzles in a variety of ways for flexibility as your coolant-placement needs change.

Ball Socket Connection

Designed to fit into the sockets found on CNC (computer numerical control) machines.

Nozzles with Bendable Extension Tube— Made of brass, these nozzles have a 6″ long copper extension tube that can be cut to any length and bent in any direction. Temperature range is –40° to +300° F. Maximum pressure is 500 psi.

Extended Nozzles— Body is plastic; ball is stainless steel. Temperature range is –40° to +160° F. Maximum pressure is 150 psi.

Adapters— Install these plastic adapters in an open socket in your machine. They allow you to use Loc-Line coolant hose or threaded coolant nozzles with your machine. Temperature range is –40° to +160° F. Maximum pressure is 150 psi.

Air-Powered Mist Coolant Dispensers

Shown with Optional Magnetic Nozzle Holder

When you need to cool short or intermittent machine cycles efficiently, use a mist of coolant. Coolant reservoirs are not included.

(A&B) For Water-Based Coolants— *Style A* includes a 4-ft. long siphon line and 2-ft. long plastic coolant hose with 4″ long brass nozzle. Air inlet is 1/8″ NPT female. Mount dispenser to your equipment by using the two 3/32″ dia. mounting holes (fasteners not included) or by using the *optional magnetic nozzle holder* (sold separately).

Style B has a 7-ft. long siphon line and magnetic base for easy mounting. Nozzle is 7″ long flexible plastic and stays in place once positioned. Air inlet is 1/8″ NPT female.

(C) For Water- and Oil-Based Coolants— Separate air and liquid controls plus a built-in regulator allow more accurate mixtures. Dispenser has a 10-ft. long siphon line and magnetic base for easy mounting. Nozzle is 13″ long flexible plastic and stays in place once positioned. Air inlet is 1/4″ NPT male quick-disconnect.

For Coolant Type	Nozzle Style	Required Air Pressure		
A Water Based	45°	30 to 120 psi	1186K17	$64.65
B Water Based	Any-Which-Way	50 to 100 psi	1046K18	82.48
C Water Based and Oil Based	Any-Which-Way	10 to 50 psi	10445K34	154.35

Optional 4-ft. Hose Assembly for Style A			1186K54	36.30

For coolants, see page 2178.

Air-Powered Mist Coolant Dispensers with Reservoir

Disperse heat from short machine cycles and avoid waste with a mist of coolant. These dispensers include hose, nozzles, and adjustable air and coolant controls.

(A) Plastic Reservoir— Use with water-based coolants. These dispensers have a 5-ft. long brass coolant hose with 6″ long straight brass nozzle, unless noted. Inlet is 1/4″ NPT female. Required air pressure is 50 to 100 psi. All include a mounting bracket with two 5/16″ dia. mounting holes (fasteners not included).

1-qt. reservoirs have a sight gauge. *1-gal. reservoirs* have a liquid level gauge.

Also Available: Repl. parts. Please ask for 1324K83 and specify parts needed.

(B&C) Steel Reservoir— Use with water- and oil-based coolants. These dispensers have a 4-ft. long plastic coolant hose encased in a stainless steel braid. Inlet is 1/8″ NPT female. Required air pressure is 30 to 125 psi. All include a mounting bracket with two 3/16″ dia. mounting holes (fasteners not included).

Style B reservoirs have a 12″ long Any-Which-Way flexible plastic nozzle with 3″ long stainless steel tip. *Style C reservoirs* have a low-coolant indicator, a 3″ long stainless steel straight nozzle and a magnetic nozzle base.

Also Available: Repl. parts. Please ask for 1199K92 and specify parts needed.

(D) Stainless Steel Reservoir— Use with water-based coolants. These dispensers have a 4-ft. long plastic coolant hose with 6″ long, 45° brass nozzle (unless noted) and a magnetic nozzle base. Inlet is 1/8″ NPT female. Required air pressure is 30 to 120 psi.

Install the *optional on/off air switch* in your air-supply line to save energy and reduce waste.

Also Available: Repl. parts. Please ask for 1131K93 and specify parts needed.

Precision-Control Air-Powered Droplet Coolant Dispenser with Reservoir

Deliver a small, controlled amount of coolant, reducing disposal costs while improving the finish of your work. Use with synthetic and vegetable-based coolants (each sold separately).

Dispenser comes with two 6-ft. plastic delivery hoses and two 18″ long, Any-Which-Way flexible plastic nozzles, each with a brass tip and magnetic base. Reservoir is plastic and has a capacity of 16 oz. Easy-to-set knobs give you precise control of both the air flow and the number of droplets per minute (2 to 16) for each coolant hose.

Dispenser measures 7 1/16″ Ht. × 10 1/16″ Wd. × 7 1/16″ Dp.; operates on 120 VAC, 60 Hz (0.06 amp draw); and has a 6-ft. power cord with three-prong plug. Mount using the two 11/32″ dia. holes (fasteners not included) or the *optional magnetic mounting kit*, which is the choice if you will be moving the unit from one machine to another. Inlet is 1/4″ NPT female. Required air pressure is 60 to 125 psi.

Dispenser	**10835K23**	$816.73

Synthetic Coolant (1-gal. Container)	**10305K16**	101.72
Vegetable Coolant (1-gal. Container)	**10305K26**	104.21

Flooding Coolant Pumps with Reservoir

When longer machine cycles create more heat than a mist can handle, provide a continuous stream of coolant to disperse heat and extend tool life. The reservoir includes a chip collector and baffle (unless noted) to keep fluid clean. All pumps are powered by a 115 VAC, 60 Hz, single-phase motor.

(E) For Low- to Medium-Viscosity Liquids— *1-gallon pump* has 6 ft. of plastic tubing, an adjustable 6″ plastic nozzle, and a 4-ft. power cord with three-prong plug.

5-gallon pumps have 6 ft. of plastic tubing, a flexible 12″ plastic nozzle, a brass control valve, and a 6-ft. power cord with three-prong plug.

10-gallon pump has 4 ft. of rubber tubing, a flexible 12″ plastic nozzle, a brass control valve, and a 6-ft. power cord with three-prong plug.

(F) For High-Viscosity Liquids— Pumps have 4 ft. of rubber tubing, a flexible 15″ steel nozzle, a brass control valve, and an 8-ft. power cord with three-prong plug. They also have a 3/8″ NPT female outlet.

About Knobs

Threaded Stud

Threaded

Threaded Through Hole

Through Hole with Threaded Insert

Unthreaded

Unthreaded Through Hole

Solid Hub

Knobs provide excellent gripping action for positioning, tightening, and holding fixtures, equipment, and machinery. Because knobs require no tools for adjusting, they're a good alternative to fasteners.

Knobs with Threaded Stud— Ready to install. See pages 2206-2210.

Knobs with Threaded or Unthreaded Hole— Mount to your rod, shaft, or fastener. See pages 2211-2219.

Knobs with Solid Hub— Ready for you to machine to your own specifications. See page 2220.

For information about knobs, see page 2206.

Plastic Threaded Ball Knobs

Phenolic

Polypropylene

Phenolic is shiny, scratch resistant, and very hard. Temperature range is –30° to +400° F, unless noted.

Polypropylene has greater impact resistance than phenolic, plus a textured finish for a better grip. *Black* knobs have a temperature range of –15° to +225° F. *Red* knobs have a temperature range of –15° to +125° F.

Adjustable-Torque Threaded Knobs

Set torque with a hex key to prevent overtightening that can damage sensitive equipment. Once the torque limit is reached, the knob head disengages and turns freely. Knobs are steel with a black-oxide finish. Use a 3/32″ hex key (sold separately).

Size	Thread Dp.	(A)	(B)	(C)	(D)	Torque Range		Each 1-4	Each 5-Up
5/16″-18	1/2″	1 3/16″	3/4″	5/8″	9/16″	3 to 6 in.-lbs.	6463K211	$22.36	$20.33

Knobs ***with set screw*** allow you to tighten them to a shaft. Set screw size is 1/4″-20.

(Style 7) Fast Lock— The angled through hole lets you quickly slide the knob along a threaded shaft. To engage threads, straighten knob and tighten. *Note:* Not recommended for use where vibration is a concern.

Pry-to-Tighten Knobs

When hand-tightening isn't possible, insert a metal bar between the pins of these knobs for the leverage you need. Turn the bar (sold separately on page 3671) to tighten. Knobs are made of zinc-plated ductile iron.

■ No metal insert. Threads are molded into phenolic.

♦ Prices are 10% lower when you buy in quantities of 10 or more.

Indicating Knobs

Be sure of your settings with these knobs. They're made of scratch-resistant black phenolic and have an unthreaded hole. Temperature range is –30° to +400° F. *Styles 1, 2, 3, 5, 11,* and *15* have a silver-colored cap.

Knobs ***for round shafts*** have a set screw for tightening.
Knobs ***for D-shaped shafts*** have a spring except for 6094K33 and 6094K96, which have a set screw for tightening.

Comfort-Grip Indicating Knobs

The black thermoplastic elastomer shell on these knobs is soft to the touch and improves grip. They have a polypropylene core, an unthreaded hole, and a set screw for tightening onto the shaft. All except Style 20 have a gray position indicator. Temperature range is –60° to +210° F.

	Fits Shaft Dia.	(A)	(D)	Hole Dp.	Set Screw Size		Each ♦
20	1/4"	5/8"	9/16"	1/2"	4-40	**60955K61**	$2.52

Turn-Counting Knobs

Simple to set and reset, these dial knobs have easy-to-read scales for monitoring the number of shaft turns. Use the included 4-40 set screw and hex key to tighten to the shaft. Flip the locking switch to prevent slipping and ensure long-term precision. Knobs are black.

Choose a knob with a maximum knob turn value that is equal to or greater than the number of turns required.

Styles 25&26 have two scales and a temperature range of 35° to 400° F. *Style 25* is plastic. *Style 26* is aluminum. ***Styles 27&28*** have one scale and are made of plastic. Temperature range is –22° to +185° F. *Style 28* has a 1 3/4" Ht. × 1" Wd. aluminum housing.

For installation instructions, go to mcmaster.com and search for 3148KAC.

Lever Handles

Handles ***with fixed ball knob*** are an ideal replacement for gear levers. Knob is black phenolic with a temperature range of −70° to +200° F. Shaft is black-oxide steel.

Handles ***with revolving ball knob*** provide a friction-free grip—perfect for hand wheels and cranks. Knob is black phenolic with a temperature range of −4° to +300° F. Shaft is zinc-plated steel.

Quick-Positioning Cam Handles

For fast installation without ratcheting, simply clamp down on these handles. All have a threaded stud with a screwdriver slot at the top for fine-tune adjustment when clamping space is limited.

Aluminum handles have a black powder-coated finish.

Contemporary Style Adjustable Handles with Threaded Hole

Lift the handle to disengage and rotate freely for adjustment; release to engage gear teeth and tighten. These handles are ideal for confined work areas as well as applications requiring quick setups and frequent adjustments. **To Order:** Please specify color: black or orange.

Die cast zinc handles have a powder-coated finish.

Choose-a-Color Adjustable Handles

With Threaded Stud

With Threaded Hole

Lift the handle to disengage and rotate freely for adjustment; release to engage gear teeth and tighten. These handles are ideal for confined work areas as well as applications requiring quick setups and frequent adjustments. All handles are nylon and have a temperature range of –40° to +200° F.

To Order: Please specify color: blue, green, red, or yellow.

Milling Machine Handles

Unlike ordinary feed handles, these heavy duty handles engage and disengage with a simple flick of the wrist. Also known as quill-feed handles, they speed operations—especially when drilling deep holes. Install using the included 5/16″-18 set screw.

All are 9 1/4″ long with a 1″ dia. unthreaded hole. Shaft is black-oxide steel and has a black phenolic knob with a maximum temperature of 384° F.

For Bridgeport Series 1 and 2 Mills ..... 2839A71 .. $47.50
For Lagun Mills ..... 2839A72 .. 47.50

Safety Adjustable Handles

With Threaded Stud

With Threaded Hole

The gear teeth on these handles engage only after pushing down on the handle. To move handle along the stud, just push down and turn. Once you release the handle, it will spin freely if accidentally bumped. Handles are black nylon and have a temperature range of –50° to +200° F.

Comfort-Grip Adjustable Handles

With Threaded Stud

With Threaded Hole

The soft thermoplastic elastomer surface improves grip. Lift the handle to disengage and rotate freely for adjustment; release to engage gear teeth and tighten. These handles are ideal for confined work areas as well as applications requiring quick setups and frequent adjustments. All have a polypropylene core and temp. range of –60° to +210° F. Color is black.

Low-Profile Steel Adjustable Handles with Phenolic Ball Knob

Straight Handle with Threaded Stud

Angled Handle with Threaded Insert

Low-profile design makes these handles ideal for tight spaces. To operate, lift the handle to disengage from internal gear teeth, rotate to desired position, and release the handle to engage gear teeth.

Handles are steel with a black-oxide finish. Ball knob is made of black phenolic and has a temperature range of –22° to +230° F.

Glass-Filled Nylon Adjustable Crank Handles

Made of glass-filled nylon for impact resistance, these crank handles also feature adjustability. To operate, lift the handle to disengage from internal gear teeth, rotate to desired position, and release handle to engage gear teeth. All have a threaded hole. Handles are black and have a temperature range of 14° to 248° F.

Steel Ratchet Crank Handles

Combination ratchet arm and revolving crank handles make machinery adjustment faster, easier, and safer. Reversing control allows you to quickly reverse cranking direction. Ratchet arm is steel with a black powder-coated finish. The revolving handle is black phenolic and has a maximum temperature of 300° F.

About Hand Wheels

Use hand wheels to manually adjust valves, presses, and a variety of machine components. To rotate the wheel, simply grasp the wheel rim or the handle and turn.

Spoked hand wheels allow a better grip on the rim. ***Solid*** hand wheels are safer, lacking openings that can catch your hands.

Dished (also known as offset) hand wheels keep your hands away from machinery. ***Straight*** hand wheels are better for tight spaces.

Some hand wheels include ***handles***. Choose from *stationary handles*, *revolving handles* for reduced friction, and *fold-away revolving handles*, which reduce friction and allow you to safely store the handle out of the way.

Spoked Plastic Dished Hand Wheels

Two Spoke with Unthreaded Hole and Revolving Handle

Three Spoke with Unthreaded Through Hole and Revolving Handle

These hand wheels are made of corrosion-resistant plastic with steel hubs. Color is black.

Two Spoke— Hand wheels are thermoplastic. Temperature range is 32° to 195° F.

Three Spoke— Hand wheels are nylon. Temperature range is –50° to +250° F.

For information about hand wheels, see page 2230.

Spoked Aluminum Hand Wheels

Made of lightweight, corrosion-resistant aluminum, these hand wheels have an unthreaded through hole.

Two Spoke— These dished hand wheels have a black powder-coated finish that prevents oxidation and won't leave residue on your hands. *Revolving handles* are black phenolic with a temperature range of –4° to +212° F.

Three Spoke— The outer rim is machine-polished to a smooth, high-gloss finish. Hand wheels ***with set screw and keyway*** allow easy installation onto a shaft. *Stationary handles* are polished steel. *Revolving handles* are polished aluminum.

Spoked Cast Iron Hand Wheels

Dished Unfinished Three Spoke without Handle

Straight Polished Three Spoke with Handle

These hand wheels are made of rugged, durable cast iron.

Unfinished— Hubs are solid.

Polished— Hubs have an unthreaded through hole. Handles are polished steel.

Dial-Indicating Aluminum Hand Wheels

Spoked

Solid

An easy-to-read dial in the center of the dished wheel gives you accurate settings for precision applications. The dials have an impact-resistant acrylic face and two pointers. The small pointer is geared so that 12 turns of the hand wheel equal one rotation of the pointer, while the large pointer is geared so that one turn of the hand wheel equals one rotation of the pointer. Pointers rotate clockwise.

Hand wheels have a black powder-coated finish. All have an unthreaded through hole with a ¼″-20 set screw and operate on horizontal shafts at angles up to 45°.

For information about hand wheels, see page 2230.

Solid Polished Aluminum Hand Wheels

Lightweight and economical, these aluminum hand wheels have a polished rim and an unthreaded through hole. Hand wheels ***with set screw and keyway*** allow easy installation onto a shaft.

Stationary handles are polished steel; *revolving handles* are polished aluminum.

Metric Safety Clutch Aluminum Dished Hand Wheels

Increase operator safety while performing applications with high shaft speeds. A clutch in the hand wheel lets the shaft rotate while keeping the wheel stationary. Wheel is manually adjustable by pulling on it; just release to return it to its stationary position. A fitting in the hand wheel hub lubricates the unthreaded through hole with keyway. Hand wheel is solid aluminum with a polished rim. Clutch is steel.

Leak-Detecting Pipe Flange Covers

With pH Patch

See Through

The wrap-around design of these chemical-resistant covers contains acid and caustic pipe leaks, protecting personnel and equipment. All are UV resistant, can be used indoors and out, and are made for 150 psi pipe flanges.

Covers with pH patch have a pH detecting patch that's orange when neutral. When a tiny amount of liquid makes contact with the patch, it changes color to indicate a leak. *Red, white,* and *brown* covers are plastic and have a maximum temperature of 140° F. *Chemical-resistant tan* covers are PTFE-coated fiberglass that's highly resistant to acids, alkalies, and most chemicals except hydrofluoric acid. Maximum temperature is 450° F.

See-through covers have a clear plastic center. Maximum temperature is 300° F.

Replacement pH Patches (Pkg. of 10) 9169K77 $7.50

Quick-Spot Leak Detectors

Squeeze Bottle

Bubbling action at the source of leaks provides a quick and reliable leak detection method, saving time and energy costs. These noncorrosive, nonflammable detectors find leaks in pipes, tubes, fittings, tanks, and cylinders. They wash off with water.

These products are compliant under all state VOC rules in effect on September 1, 2011.

Foam detector bubbles over pressure leaks and forms a crater over vacuum leaks.

Compressed gas (oxygen-compatible) detectors meet MIL-PRF-25567E and nuclear industry and ASTM standards for halogen and chloride content.

High-visibility detectors are fluorescent green and adhere to vertical surfaces. Use the *optional UV leak detection flashlight* for enhanced viewing.

Viscosity Testers

Also known as Zahn cups, these testers determine the viscosity of liquids with just a quick dip. They also have a thermometer to simultaneously measure temperatures from 0° to 220° F. Testing cups are made of stainless steel. Overall size is 14.4″ Lg.×1.8″ Wd.×1.4″ Dp. Conform to ASTM D4212.

Choose from testers for: ***(1)*** solvents and very thin oils; ***(2)*** thin oils, mixed paints, and lacquers; ***(3)*** medium oils and mixed paints; ***(4)*** heavy liquids; and ***(5)*** very heavy liquids and mixtures.

Type	Viscosity	Range, centistokes		
1	Very Thin	20-115	8547T21	$130.70
2	Thin	45-305	8547T22	130.70
3	Medium	200-875	8547T23	130.70
4	Heavy	365-1,180	8547T24	130.70
5	Very Heavy	500-1,850	8547T25	130.70

Leak-Detecting Dyes

Easy-to-see colors enable you to visually inspect for leaks without ultraviolet light. For enhanced viewing, you can use the *optional UV leak detection flashlight*.

These products are compliant under all state VOC rules in effect on September 1, 2011.

For Water Systems

Tablets are clean and easy to use.

Liquid is a good choice for larger volumes of water. One gallon of water occupies 0.1337 cubic ft. Calculate the number of gallons a tank holds by dividing the tank volume by 0.1337. Certified to ANSI/NSF standard 60.

Size	Color	Max. Water Treated, gal.		
200 Tablets	Red	12,000	1400T43	$47.40
200 Tablets	Yellow/Green	12,000	1400T12	39.08
1-pt. Liquid	Red	3,125	1400T44	19.40
1-pt. Liquid	Yellow/Green	12,500	1400T45	19.40
1-gal. Liquid	Red	25,000	1400T46	91.73
1-gal. Liquid	Yellow/Green	100,000	1400T49	91.73

Optional UV Leak Detection Flashlight 65195T25 41.67

For Hydraulic Systems

Use 1 oz. of dye for every 5 gallons of oil, solvent, wax, or other industrial fluid you're inspecting.

Size	Color		
4-oz. Liquid	Red	1400T23	$20.30
4-oz. Liquid	Fluorescent Red	1400T22	58.38
4-oz. Liquid	Blue	1400T21	31.15

Optional UV Leak Detection Flashlight 65195T25 41.67

Stethoscopes

1024T41 *1024T28* *1024T32*

Single-Ear Telescoping with Sensor Probe ..... 1024T41 .. $26.19
Two-Ear with Sensor Probe and Extension ..... 1024T28 .. 13.84
Two-Ear with Disc Probe and Sensor Probe ..... 1024T32 .. 46.15

Noise-Filtering Stethoscopes

Reduce background noise so you can isolate individual sounds to detect mechanical problems and leaks. Stethoscope has a 9″ flexible probe, a 5″ sensor probe extension, and headphones that shut out surrounding noise. Operates on one 9-volt battery (included) and comes with a plastic carrying case.

Stethoscope ..... 85465T53 .. $146.32
Replacement 9-Volt Battery (Pkg. of 1) ..... 71455K56 .. 2.75

Early Warning Ultrasonic Leak Detectors

Sensing inaudible sound waves, this detector converts ultrasonic waves to an audible sound so you can find leaks. An LED display indicates when a leak is identified. Unlike typical leak detectors, this unit doesn't rely only on the presence of a gas to work, making it suitable for a wider range of applications. In addition to gas leaks, it identifies ultrasonic leaks caused by failing solenoids, valves, and bearings. Detector includes a 10″ tube extension, 3½″ dia. reflector dish for sound amplification, and plastic carrying case.

For low-pressure systems, use the *ultrasonic sound generator for systems under 10 psi*.

Detector and ultrasonic sound generator each operate on one 9-volt battery (included).

Detector	**8402T55**	$307.44
Optional Ultrasonic Sound Generator for Systems Under 10 psi	**8402T57**	133.52
Replacement 9-volt Battery (Pkg. of 1)	**71455K56**	2.75

Combustible Gas Leak Detectors

Identify gas leaks economically with this compact leak detector. Detects leaks in pipes, valves, storage tanks, and other gas system components. Detector signals with both a red light and a continuous beeping sound. Operates on two AA batteries (sold separately).

Gases Detected	Min. ppm
Methane (natural gas)	5,000
Hydrogen	3,000
Butane	2,400
Propane	2,000

Detector	**1076T8**	$38.29
AA Batteries (Pkg. of 4)	**71455K53**	2.94

Combustion Efficiency Meters

Measure boiler and furnace combustion efficiency with this hand-held meter, which works with most fossil fuels including natural gas, oil, propane, and kerosene. Accuracy is ±0.3% of oxygen content. Meter automatically calibrates to normal atmospheric oxygen and has an LCD, 5½-ft. hose, and 11″ long probe. Operates on four AA batteries (included) and comes with a storage bag.

Measurement Ranges	
Combustion Efficiency of System	0.1 to 99.9%
Carbon Dioxide Content of Heated Air	0 to 15%
Excess Air Produced by System	0 to 400%
Flue Gas Oxygen Content	0 to 20.9%
Flue Gas Temperature	0 to 999° F

Meter	**3937K21**	$543.92
Replacement Oxygen Sensor	**3937K29**	164.06
Replacement AA Batteries (Pkg. of 4)	**71455K53**	2.94

Speed-Monitoring Switches

Set switch to a specified speed to detect unwanted machinery slowdown that can cause damage and downtime. The activation point is adjustable between 5 and 100 rpm. Applications include drive trains, power-driven components, and conveyors. Switch has an SPDT relay contact rated 5 amps @ 115 volts AC. Input voltage is 115 AC, 60 Hz. Conduit connection is 1″ NPT female.

Switch has an aluminum housing and mounting plate with two 0.32″ dia. slots. Rated NEMA 7 (Class I, Group D) and NEMA 9 (Class II, Groups E, F, and G) for indoor hazardous locations, and NEMA 4X for washdown and corrosion protection. UL and C-UL listed.

6177K11 ..... $403.64

Refrigerant Leak Detectors

An LED display and audible signal alert you to leaks as small as 0.1 oz. per year in air conditioning and refrigeration systems. The audible signal also increases in intensity as you approach the leak. Unit detects halogenated refrigerants such as hydrofluorocarbons (HFCs), chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs), R-22 (freon), R-134a, and 410A. Meet SAE J1627. Detector includes a 14″ flexible sensor probe for hard-to-reach areas and a plastic carrying case. Operates on two C batteries (included). UL classified. CE approved.

Detector	**1130T61**	$193.82
Replacement Tips (Pkg. of 3)	**1130T62**	36.80
Replacement C Batteries (Pkg. of 6)	**71455K54**	6.49

High-Sensitivity Combustible Gas Leak Detectors

Identify a variety of small leaks quickly and access hard-to-reach areas with the 15″ flexible probe. Detector has an LED indicator and an audible signal that increases in intensity the closer you get to the leak. It includes two rechargeable NiCad batteries, a battery charger, and plastic carrying case. UL listed Class 1, Groups A, B, C, and D for hazardous locations and MSHA (Mine Safety and Health Administration) approved.

Gases Detected	Min. ppm	Gases Detected	Min. ppm
Methane (natural gas)	500	Acetone	50
Hydrogen	500	Methanol	50
Butane	500	Ammonia	20
Propane	500	Gasoline	1
		Chlorine	1

Detector	**1140T12**	$199.31
Replacement Tip	**1140T21**	29.60
Replacement NiCad Battery	**1140T22**	7.00

Speed Guns

Point and shoot for instant speed readings in mph. Measuring range is 6 to 110 mph for small objects such as a baseball and 6 to 200 mph for large objects such as a car. Maximum measuring distance is 1,300 ft. Accuracy is ±1 mph. Gun has a three-digit LCD and a plastic housing. Operates on two C batteries (sold separately) and comes with a storage bag.

Speed Gun	**7790T5**	$122.64
C Batteries (Pkg. of 6)	**71455K54**	6.49

Surface Contact Tachometers

- Range: 1,000 to 4,000 rpm
- Accuracy Range: ±0.5% of reading

Also known as a reed tachometer, this unit is compact for portability. Place it against enclosures of rotating equipment to measure speed. The reeds are precision calibrated and arranged in two easy-to-read rows. Tachometer is 3″ Ht. × 2″ Wd. × 2½″ Dp. and has an aluminum case. It operates mechanically, so batteries aren't required.

1419T3 ..... $355.38

Dial Contact Tachometers

- Range: 0 to 4,000 rpm
- Accuracy: ±5% of reading

Housed in steel for durability, this tachometer can measure both clockwise and counterclockwise rotation. It includes a tip for measuring shafts with a center hole and a tip for measuring flat end surfaces.

Optional 12″ extension shaft accesses hard-to-reach areas.

			Each
Tachometer	**1416T1**		$124.88
Optional 12″ Extension Shaft	**1416T2**		20.15
Replacement Tips (One for Shafts with Center Hole, One for Flat End Surfaces)	**1416T3**	**Set**	$4.96

About Tachometers

Tachometers measure the speed of rotating parts on machines such as shafts, gears, and belts.

Contact tachometers come in direct contact with an object and are an excellent choice for dirty and dusty environments.

Noncontact tachometers have a beam of light or laser that reflects off a piece of reflective tape attached to the rotating point.

Contact Tachometers

- Range: 0.5 to 19,999 rpm
- Accuracy: ±0.05% of reading

Units of Measure
Revolutions/min.
Feet/min.
Meters/min.

Measure speed in three different units with one tachometer. These units include a tip for measuring shafts with a center hole, tip for measuring flat end surfaces, 4″ circumference speed wheel, and a case. They have an LCD and plastic housing. Operate on four AA batteries (included). Choose with or without a certificate of calibration traceable to NIST.

Tachometer	8714T11	$196.41
Tachometer with NIST Certificate	8714T22	296.86
Tip for Shafts with Center Hole	8714T41	12.92
Tip for Flat End Surfaces	8714T45	12.25
4″ Circumference Speed Wheel	8714T46	12.92
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

High-Accuracy Contact Tachometers

- Range: 0.1 to 25,000 rpm
- Accuracy: ±0.006% of reading

Units of Measure	
Revolutions/min., hr.	Yards/min., hr.
Inches/min.	Meters/min., hr.
Feet/min., hr	Miles/hr.
Total Revolutions	Length—m, cm, in., ft., yd.

The most accurate tachometers we offer. Units include two tips for measuring shafts with a center hole, one tip for measuring flat end surfaces, speed wheel, 3½″ extension shaft, and a case. They have an aluminum housing and come with a certificate of calibration traceable to NIST. Operate on two AA batteries (included).

Choose an ***LCD display*** for use in bright light or ***LED display*** for dimly lit areas.

Note: Units are calibrated to work with either a 6″ or 12″ circumference speed wheel but not both.

Display	Speed Wheel		
LCD	6″ Circumference	11995T71	$292.50
LED	6″ Circumference	11995T72	292.50
LED	12″ Circumference	11995T73	335.83
3½″ Extension Shaft		11995T56	14.00
Tip for Shafts with Center Hole		11995T53	8.27
Tip for Flat End Surfaces		11995T54	8.27
6″ Circumference Speed Wheel		11995T55	34.36
12″ Circumference Speed Wheel		11995T75	57.27
Replacement AA Batteries (Pkg. of 4)		71455K53	2.94

High-Accuracy Noncontact Tachometers

- Range: 5 to 99,999 rpm
- Measuring Distance: Up to 3 ft.
- Accuracy: ±0.01% of reading
- Unit of Measure: Revolutions/Minute

Take precise measurements from a distance. This tachometer has an LCD and plastic housing. It includes 12″ of reflective tape and a ¼″-20 female threaded bushing for tripod mounting. Operates on two AA batteries (included).

Tachometer	11765T58	$162.96
Plastic Carrying Case	11765T61	27.78
Reflective Tape Roll (5 ft. Lg. × ½″ Wd.)	7178A12	10.59
Reflective ½″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

Noncontact Tachometers

- Range: 2 to 99,999 rpm
- Measuring Distance: Up to 20″
- Accuracy: ±0.05% of reading
- Unit of Measure: Revolutions/Minute

Get an accurate measurement while keeping clear of moving equipment. Tachometers have an LCD and plastic housing. They include 2 ft. of reflective tape and operate on one 9-volt battery (included). Choose with or without certificate of calibration traceable to NIST.

Tachometer	1905T22	$147.52
Tachometer with NIST Certificate	1905T42	239.74
Reflective Tape Roll (5 ft. Lg. × ½″ Wd.)	7178A12	10.59
Reflective ½″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25
Replacement 9-Volt Battery (Pkg. of 1)	71455K56	2.75

Contact/Noncontact Tachometers

- Range: Contact: 0.5 to 20,000 rpm; Noncontact: 5 to 200,000 rpm
- Measuring Distance: Up to 25 ft.
- Accuracy: Contact: ±0.05% of reading; Noncontact: ±0.01% of reading

Units of Measure	
Revs./sec., min., hr.	Yards/sec., min., hr.
Inches/sec., min., hr.	Centimeters/sec., min., hr.
Feet/sec., min., hr.	Meters/sec., min., hr.

Capture high speed readings from a distance in noncontact mode, or use the included 4″ speed wheel to switch to contact mode. It includes one tip for measuring shafts with a center hole, one tip for measuring flat end surfaces, 5 ft. of reflective tape, ¼″-20 female threaded bushing for tripod mounting, and a case. Unit has an LCD and plastic housing and comes with a certificate of calibration traceable to NIST. Operates on two AA batteries (included).

BNC cable sends signals from the tachometer to a vibration data collector.

Tachometer with NIST Certificate	11765T75	$304.54
BNC Cable	11765T91	52.50
Reflective Tape Roll (5 ft. Lg. × ½″ Wd.)	7178A12	10.59
Reflective ½″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

High-Accuracy Contact/Noncontact Tachometers

- Range: 6 to 99,999 rpm
- Measuring Distance: Up to 20 ft.
- Accuracy: ±0.006% of reading

Units of Measure	
Revolutions/min.	Inches/min.
Feet/min.	Yards/min.
Meters/min.	Length—m, in., ft., yd.

Switching from contact to noncontact mode is as easy as attaching the included adapter. Tachometers include one tip for measuring shafts with a center hole, one tip for measuring flat end surfaces, speed wheel, 7″ of reflective tape, ¼″-20 female threaded bushing for tripod mounting, and a case. They have an aluminum housing and come with a certificate of calibration traceable to NIST. Operate on two AA batteries (included). Choose an ***LCD display*** for use in bright light or ***LED display*** for dimly lit areas.

Display	Speed Wheel

For information about tachometers, see page 2236.

Panel-Mount Tachometers

Tachometer

Proximity Sensor

Photoelectric Sensor

- Range: 5 to 99,990 rpm
- Accuracy: ±0.05% of reading

Install this tachometer and measure rpm remotely using a proximity or photoelectric sensor (sold separately). Unit has an LED display housed in a 1/8 DIN enclosure with cutout size of 1.8″ Ht.×3.6″ Wd.×3.5″ Dp. Mounting hardware included. Operates on 115/230 volts AC, 50/60 Hz and has screw terminal connections.

Sensors have a 6-ft. cable and two mounting holes. Temperature range is 0° to 130° F.

Proximity sensor magnetically detects moving metal objects, such as gear teeth and fan blades. Range is up to 36,000 rpm. Maximum measuring distance is 0.1″. Size is 1.4″ Ht.×0.71″ Wd.×0.71″ Dp.

Photoelectric sensor generates light beams across a 0.8″ wide gap. When a rotating object enters this gap, the beam is broken. Range is up to 6,000 rpm. Maximum measuring distance is 0.4″. Size is 2.5″ Ht.×2″ Wd.×0.8″ Dp.

Tachometer	14215T11	$199.98
Proximity Sensor	14215T22	56.23
Photoelectric Sensor	14215T33	149.98
Reflective Tape Roll (5 ft. Lg.×1/2″ Wd.)	7178A12	10.59
Reflective 1/2″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25

High-Accuracy Panel-Mount Tachometers

- Range: Standard: 5 to 99,999 rpm; Programmable and Deluxe Programmable: 5 to 999,990 rpm
- Accuracy: Standard: ±0.005% of reading; Programmable and Deluxe Programmable: ±0.001% of reading

Combine any of these tachometers and sensors to create the most accurate tachometer system we offer. Install a tachometer in a convenient location and measure speed remotely using a sensor. Mounting hardware included.

Tachometers

They have an LED display housed in a plastic 1/8 DIN enclosure with cutout size of 1.8″ Ht.×3.6″ Wd.×4.5″ Dp. Operate on 115 volts AC, 50/60 Hz and have screw terminal connections.

Standard— Display reads down to one unit. It updates twice per second when the reading exceeds 120 rpm.

Programmable— Has minimum and maximum reading recall and totalizes from 1 to 99,999. It comes with a certificate of calibration traceable to NIST.

Deluxe Programmable— Have the same features as the programmable plus two internal alarms and a USB output. Tachometer *with current output* has a range of 4 to 20 mA. Tachometer *with voltage output* has a range of 0 to 5 volts DC.

Standard	8518T61	$244.55
Programmable	8518T62	293.66
Deluxe Programmable with Current Output	8518T632	471.16
Deluxe Programmable with Voltage Output	8518T631	471.16
Reflective Tape Roll (5 ft. Lg.×1/2″ Wd.)	7178A12	10.59
Reflective 1/2″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25

Sensors

Proximity Sensor

Magnetic Sensor

Optical Sensor

Proximity sensor can be used in dirty and wet environments. Maximum measuring distance is 0.2″ from a 1/2″ minimum size metal target. Size is 0.43″ Dia.×1.3″ Lg.

Magnetic sensor has a maximum measuring distance of 0.005″ from a 0.1″ minimum size ferrous metal target. Size is 0.63″ Dia.×2″ Lg.

Optical sensor performs best in clean environments and works at up to a 45° angle from reflective tape. Maximum measuring distance is 36″. Size is 0.63″ Dia.×2.9″ Lg.

	rpm Range	Operating Temp. Range, °F	Cable Lg., ft.		
Proximity	1-60,000	−4° to +140°	6	8518T92	$112.50
Magnetic	1-99,999	−100° to +225°	8	8518T91	123.21
Optical	1-250,000	−14° to +158°	8	8518T96	150.00

Contact/Noncontact Tachometers/ Thermometers

- Accuracy: ±0.05% of reading
- Measuring Distance: Up to 6 1/2 ft.
- Range: Contact: 0.5 to 20,000 rpm; Noncontact: 10 to 99,999 rpm

Units of Measure
Revolutions/min.
Feet/min.
Meters/min.

Easily switch modes—these tachometers have a contact tip on one end and a noncontact sensor on the other. They also measure temperatures from −4° to +600° F. Units include one tip for measuring shafts with a center hole, one tip for flat end surfaces, 4″ circumference speed wheel, 24″ of reflective tape, and a case. They have an LCD and plastic housing. Operate on four AA batteries (included). Choose with or without a certificate of calibration traceable to NIST.

Tachometer	8430T22	$324.57
Tachometer with NIST Certificate	8430T77	545.89
Tip for Shafts with Center Hole	8714T41	12.92
Tip for Flat End Surfaces	8714T45	12.25
4″ Circumference Speed Wheel	8714T46	12.92
Reflective Tape Roll (5 ft. Lg.×1/2″ Wd.)	7178A12	10.59
Reflective 1/2″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

Stroboscopes

- rpm and Flashes per Minute: Stroboscope: 30 to 10,000; Stroboscope with NIST Certificate: 30 to 20,000
- Accuracy: ±0.002% of reading

Inspect rotating equipment and measure rpm. Stroboscopes have a flash duration of 20 to 50 microseconds and a flash power of 13 watts. Display is a backlit LCD. Units have a plastic housing and 1/4″-20 female threaded bushing for tripod mounting.

AC-powered stroboscopes run on 115 volts AC, 50-400 Hz. They have a 5-ft. cord with three-prong plug.

Battery-powered stroboscopes have an internal battery and include a 115/230-volt AC charger.

	Stroboscopes		Stroboscopes w/ NIST Certificate	
AC Powered	1177T52	$293.66	1177T71	$466.52
Battery Powered	1177T53	407.59	1177T92	520.54
Optional Plastic Carrying Case			1177T73	$93.60
Replacement Flash Bulb			1177T74	67.50
Replacement Battery Charger			1177T95	45.00

Heavy Duty Stroboscopes

- rpm and Flashes per Minute: 40 to 35,000
- Accuracy: ±0.01% of reading

AC Powered

Battery Powered

An aluminum housing makes these our strongest, most durable stroboscopes. Used to inspect rotating equipment and measure rpm, units have an automatic brightness control, LED display, and a 1/4″-20 female threaded bushing for tripod mounting. Flash duration is 10 to 40 microseconds and flash power is 10 watts. Choose with or without a certificate of calibration traceable to NIST.

AC-powered stroboscopes run on 115 volts AC, 50/60 Hz. They have an 8-ft. cord with three-prong plug.

Battery-powered stroboscopes have an internal battery and include a 100/240-volt AC charger.

	Stroboscopes		Stroboscopes w/ NIST Certificate	
AC Powered	15015T1	$622.92	15015T5	$685.55
Battery Powered	15015T2	749.60	15015T6	827.73
Optional Plastic Carrying Case			15015T21	$82.73
Replacement Flash Bulb			15015T23	59.82
Replacement Battery Charger			15015T88	137.88

Noncontact Tachometers/Stroboscopes

- Range: Tachometer: 5 to 99,999 rpm; Stroboscope: 100 to 99,999 rpm and flashes per min.
- Measuring Distance: Up to 12″
- Accuracy: ±0.1% of reading

Measure rpm and inspect moving equipment with one compact instrument. Tachometers/stroboscopes have an LCD that shows 0.1 to 1 rpm/flashes per minute and a plastic housing. Flash duration is 60 to 1,000 microseconds. Units include 2 ft. of reflective tape and a case. Operate on four AA batteries (included).

Tachometer/Stroboscope	1412T1	$357.88
Tachometer/Stroboscope with NIST Certificate	1412T2	476.65
Reflective Tape Roll (5 ft. Lg. × 1/2″ Wd.)	7178A12	10.59
Reflective 1/2″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

Combination Vibration Meters/ Stethoscopes

- Acceleration Range: 0.01 to 19.99 g
- Frequency Range: 10 to 10,000 Hz
- Velocity Range: 0.01 to 19.99 in./sec.
- Accuracy: ±2% of reading

Listen to and record machine performance. In addition to vibration, this meter measures acceleration and velocity.

Meter has an LCD, padded headphones, and a 4 1/2″ long sensor probe for locating problem areas. Housing is plastic. The magnetic base allows you to mount the probe on a machine for constant readings. Enter recorded data into the monitoring software (included) and you can predict when machine maintenance is required. Operating temperature range is –14° to +122° F. Operates on two AA batteries (included) and comes with a case.

Meter	8738T1	$1,230.36
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

Tamper and Vibration Detection Paint

Apply directly to equipment for easy and economical detection. When paint dries it becomes brittle and cracks from any movement caused by tampering or vibration. It's noncorrosive and adheres to most surfaces, including all types of metals. Temperature range is 20° to 450° F.

General-purpose paint is excellent for use on small parts.

To Order: Please specify color.

Aircraft industry paint resists aircraft hydraulic fluid.

Fast-drying paint is for large jobs such as machinery bolts.

Color		
General Purpose— *1/2 oz.*		
Black, Blue, Brown, Gray, Purple, White, Yellow	1476T31	$3.04
Fluorescent General Purpose — *1/2 oz.*		
Green, Orange, Pink, Red, Yellow, Yellow/Orange	1476T31	3.04
Aircraft Industry— *1/2 oz.*		
Pink	1476T122	4.38
Yellow	1476T12	4.38
Fast Drying— *1 oz.*		
Blue	1476T21	6.30

Hazardous-Location Vibration-Monitoring Switches

Get NEMA 4 and IP66 protection from dirt and water. Switch is rated for hazardous locations for Class I, Groups C and D, Div. 1; Class II, Groups E, F, and G, Div. 1. If vibration or shock exceeds a set point, the contacts actuate to either shut down your machine or activate an alarm. Reset switch with the push of a button. The activation point is adjustable between 0 to 5 gravity units (g's) at 0 to 60 Hz. Switch is SPDT and rated 15 amps @ 125 or 480 volts AC. Conduit connection is 3/4″ NPT female. Housing is cast aluminum with 3/8″ mounting slots (fasteners not included). UL and C-UL listed. CE approved.

1188T31 ..... $641.67

Vibration Meters

- Acceleration Range: 0.02 to 199.9 g
- Frequency Range: 3 to 1,000 Hz
- Velocity Range: 0.02 to 199.9 in./sec.
- Displacement Range: 0.2 to 199.9 mils
- Accuracy Range: ±5% of measuring range

In addition to vibration, this meter measures acceleration, velocity, and displacement. Use to monitor the performance of rotating machines such as fans and pumps. Meter has an LCD that holds the reading for one minute and a plastic housing. It comes with a 1 1/2″ long probe, case, and certificate of calibration traceable to NIST. Operating temperature range is 32° to 122° F. Operates on one 9-volt battery (included).

Meter	8721T1	$744.89
Replacement 9-Volt Battery (Pkg. of 1)	71455K56	2.75

Pocket-Size Vibration Meters

Quickly detect and measure machine vibration with these pen-size tools. A flexible steel wire reed detects vibration while the scale on the side of the meter indicates the machine vibration in cycles per minute (cpm). A simple calculation determines motor speed in rpm for engines with multiple cycles. Meters have an aluminum housing and come with a case.

Combination set contains one of each meter and a case.

Vibration Range	Accuracy		
200-2,000 cpm	±15% of Reading	1353T15	$64.33
2,000-21,000 cpm	±10% of Reading	1353T11	47.53
Combination Set		1353T13	$107.73

Vibration-Monitoring Switches

Two easy-to-set dials allow you to adjust set points for vibration and time delay and detect vibration when it first occurs. A 4 to 20 milliamp output signals an alarm if the set point is exceeded. Set a time delay for after normal speed has been reached to avoid false triggering from start-up vibration. Switches don't require a separate power source—plug the included 16-ft. cable with four-wire M12 connector into your data collector or PLC (programmable logic controller). They're normally closed and have a supply voltage of 18 to 32 DC. Housing is 2.9″ high, stainless steel, and rated IP67 for protection from dust and water. Switches have an M8 threaded mounting stud and include a plastic cover. Temperature range is –13° to +176° F.

For temporary mounting, use a ***magnetic base***.

Activation Point		
0-1″	1161T11	$270.91
0-2″	1161T12	270.91
Optional Magnetic Base for Flat Surfaces	1161T22	66.67
Optional Magnetic Base for Curved Surfaces	1161T23	126.67
Optional Glue-On Base	1161T21	22.67
Adhesive for Glue-On Base	7560A54	33.73

Corrosion-Resistant Washdown Vibration Monitors

Continuously monitor vibration in harsh environments. Constructed entirely of stainless steel, this monitor meets IP69K standards for high-pressure washdown service. Plug the included 16-ft. cable with two-wire M12 connector into your data collector or PLC (programmable logic controller) to monitor vibration from 0-1 in./sec. Output is 4 to 20 mA. Supply voltage is 9.6 to 32 DC.

Housing is 2 1/2″ high. Monitor mounts to equipment with an M8 thread and includes a 1/4″-28 adapter. Temperature range is –20° to +220° F.

Use a ***magnetic base*** for temporary mounting.

Monitor	3738T1	$280.00
Optional Magnetic Base for Flat Surfaces	1161T22	66.67
Optional Magnetic Base for Curved Surfaces	1161T23	126.67
Optional Glue-On Base	1161T21	22.67
Adhesive for Glue-On Base	7560A54	33.73

Borescopes

Also known as fiberscopes, these instruments let you clearly view spaces that would otherwise be inaccessible. Look through the scope to see what is at the other end of the flexible plastic-covered cable. Borescopes have a high resolution lens and a light with a 2.5-volt halogen bulb. They provide a 40° field of view. Maximum viewing distance from end of cable is 0.8″. Cable and lens are water resistant. Housing is plastic. Operate on two AA batteries (sold separately) and come with a case.

0.23″ dia. cable accesses extremely small openings.

0.4″ dia. cable stays where you position it.

Use the *optional camera mount* to connect a digital or video camera to your scope.

	0.23″ Dia. Cable		0.4″ Dia. Cable	
Borescope w/ 18″ Cable	6589T3	$166.02	6589T1	$166.02

AA Batteries (Pkg. of 4)			71455K53	2.94

Video Display Borescopes

Borescope with LCD

Borescope

View hard-to-reach areas on a color LCD or PC monitor up to 32 ft. away. Borescopes have a 39″ long cable and provide a 60° field of view. Maximum viewing distance from end of cable is 12″. Cable includes three attachments: a magnetic tool for picking up small metal objects, a hook tool for grabbing, and a mirror for viewing at a 90° angle. Housing is plastic. All include a case. *Optional cables* allow access to smaller openings.

Borescopes with LCD— Scopes with *0.47″ dia. cable* have a live display and operate on one 9-volt battery (included). Scope with *0.36″ dia. cable* has a detachable display for wireless use and USB and video connections and cables for transferring images to a PC or TV monitor. Operates on a rechargeable lithium ion battery (charger included).

The *optional wireless receiver* allows you to display images and video from the borescope with 0.36″ dia. cable on your PC. It has a USB connection.

Borescope— Includes a wireless receiver with USB connection for viewing images and video on a PC. Operates on a rechargeable lithium ion battery (charger included).

Inspection Mirrors

Position these mirrors to your exact requirements—they're 360° adjustable and have a telescoping handle (except 6″ long handles) with plastic grip. Round 7/8″ and 1 1/4″ dia. mirrors have a pocket clip.

Glass mirrors provide a clearer reflection; ***plastic*** mirrors are break resistant.

Magnetic light attachment has two high-intensity LEDs. Attach to any inspection mirror for convenient illumination. Operates on two lithium batteries (included).

Illuminated Inspection Mirrors

Incandescent

LED

Inspect dim or dark areas with these illuminated mirrors. They have a glass mirror and operate on included batteries.

Incandescent mirrors have a thumb wheel on the handle to adjust the mirror angle up to 90°. Shaft is rubber-coated brass.

LED mirrors have a stainless steel handle with rubber grip.

Optional 4″×4″ direct reflection mirror snaps onto incandescent mirrors for a wider field of view.

Nonconductive Inspection Mirrors

Reduce the risk of shock when inspecting electrical equipment. This plastic mirror has a black plastic-covered stainless steel backing and handle. It swivels 180°.

Size Lg.	Size Wd.	Handle Lg.		
2½″	¾″	6″	6591T2	$7.23

Nonreversed Image Inspection Mirrors

Unlike other inspection mirrors, this adjustable mirror reflects a nonreversed image. It allows you to read hard-to-reach labels, part numbers, and serial numbers. Mirror is glass and 360° adjustable. It has a shock-resistant plastic housing and chrome-plated steel telescoping handle with pocket clip.

Size Lg.	Size Wd.	Handle Lg.		
1⅛″	1¼″	6″-16″	1059T12	$23.33

Long-Reach Inspection Mirrors

With Light

Get a clear, wide-angle view of remote areas without using a ladder. Mirrors have an aluminum handle that telescopes from approximately 4 ft. to 12 ft. Mirror is 8″×8″ glass.

Mirror with light operates on four AA batteries (included).

Stainless Steel Inspection Mirrors

A

B

C

Stainless steel mirror and handle resist corrosion.

Compact mirrors are round and access tight spaces such as circuit boards. *Style B* can be autoclaved for sterile applications.

High-temperature mirrors let you inspect pilot lights and other areas up to 900° F. They have a telescoping handle and 360° adjustable mirror with cover.

Air Pressure Gauges

A-D ***Pencil Style—*** Have nickel-plated brass bodies and chucks with nylon indicator bar. *Styles A* and *B* have a pocket clip.

E-H ***Analog Dial-Gauge Style—*** *Style E* have a nickel-plated brass chuck, a 2″ dia. dial housed in black plastic, and a stop hand that holds and shows reading until valve is depressed. *Style F* has an 11½″ nylon braided hose and 2⅛″ dia. red-painted steel dial. A stop hand holds and displays reading and a push-button bleeder valve releases excess air. *Style G* has a 5½″ chrome-plated brass extension and chuck, 8″ flexible nitrile rubber hose with vinyl hand grip, and 2″ dia. chrome-plated steel dial. *Style H* has a chrome-plated brass chuck, an 8″ flexible rubber hose, and 2½″ dia. black-painted steel dial. Meets MIL-DTL-8348J Class B Size 1. Comes with a yellow-painted steel carrying case.

J&K ***Digital LCD Style—*** Each has a battery that lasts approximately five years and an on/off button. *Style J* has a chrome-plated brass chuck, 5¼″ nylon braided hose, and an air bleed valve. *Style K* holds display for 13 seconds so you have enough time to view it when readings are taken in low light or a confined space. Body and chuck are black ABS plastic.

Air Chucks

Made of brass with a die cast zinc head, these chucks have a maximum pressure of 150 psi.

Style P have a gripping mechanism that holds the valve stem, enabling hands-free airflow and reducing the chance of blow-off.

For air hose, see pages 240-246. For barbed fittings, see pages 286-290.

Tire-Valve Repair Tools

Repair Tool— In addition to rethreading the inside and outside of valve stems and inserts, this zinc-plated steel tool tightens and removes valve cores.

Repair Tool

6115A11 ..... $2.37

Stem Tool— Made with flexible steel cable, this tool aligns and seals valve stems through the rim hole. Includes tube deflator and core remover.

Stem Tool

6115A12 ..... $4.62

Patch Kit— Includes six 1″×1″ peel-and-stick patches, sandpaper, and a plastic carrying case.

4991T93 ..... $3.43

Tire Inflator/Sealant

Inflate tires and temporarily seal most punctures in an instant. Inflator/sealant has a 7″ long applicator hose with threaded valve stem fitting. Net wt. is 16 oz.

7345A29 ..... $10.12

Tire Inflator Gauges

Nylon Bar, Angled, Single-Head Chuck

Magnifying Lens Angled, Dual-Head Chuck

Straight and Angled, Dual Head

With a die cast aluminum body and a rubber hose, these lever-action gauges are strong enough to stand up to constant use. Gauges have a ¼″ NPT female air inlet connection.

The ***straight and angled, dual-head chuck with extra-long hose*** places you 15 ft. out of harms way, allowing you to inflate your truck tires remotely. It also has a deflator button to easily relieve excess pressure.

★ Meets OSHA regulation No. 1910.177 for sidewall truck tires.

Air Pumps

For emergency tire inflation and other applications, these portable air sources travel with you. All fit both Presta and Schrader valves.

A Pump is manual and lightweight.

B Suitable for high-pressure applications, this manual pump has a 2″ dia. dial gauge and 3-ft. long rubber hose.

C This pump fits most 12-volt lighter outlets and has an 11-ft., 12-volt power cord and 27″ long rubber air hose with black nylon cover. Pump also includes a locking tire-valve connector, three inflation fittings, a built-in light, and pressure gauge. Size is 9⅝″ Lg.×4″ Wd.

	Capacity	Construction	O'all Ht.

Oil- and Grease-Seal Puller

With a different size hook on each side of the double-hook end, this pry bar can remove most oil and grease seals. Overall length is 12½″.

6887A11 ..... $11.91

Piston Ring Compressors

Compress piston rings to easily install them into cylinders.

Single-Band Style—Has a flared end to keep band from following piston into cylinder. *Take-apart spring-clutch style* has a quick-release that makes it easy to remove.

Spring-Clutch Style—Assures proper fit and positive locking action.

Wrinkle-Band Style—This low-friction tool is cam operated—set the adjustment screw once to install a set of pistons.

Pro-value rules offer an economical alternative to the Starrett rules above. Also known as machinists' rules, these precision rules are made in the U.S.A. of hardened and tempered steel for stability and durability; a nonglare satin chrome finish provides rust and wear resistance. They have easy-to-read black etched graduations and meet Fed. Spec. GGG-R-791H for accuracy.

Quick-reading rules have numbered subdivisions for easy measuring.

Stainless Steel Rules

Built to last, these stainless steel rules are corrosion-resistant and semi-flexible. All have black etched graduations and a ¼″ dia. hang-up hole.

Certified rules include a serial number and a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

Certified Rule

Stainless Steel Center-Finding Rules

Inch—12″ Length

Forget the math—locating exact centers is easy with one of these Type 301 stainless steel rules. Simply position rule so the same reading is shown on the right and left edge of the object you are measuring. The center will be located at 0. All rules are semiflexible with black etched graduations and a 1/4″ dia. hang-up hole.

Length	Width	Thick.		Each
Inch: *Inches to 16ths zero-centered top; 32nds zero-centered bottom.*				
12″	1 1/4″	1/32″	2346A23	$6.63
18″	1 1/4″	1/32″	2346A28	8.70
24″	1 1/4″	1/32″	2346A25	8.98
36″	1 1/4″	1/32″	2346A26	25.50
48″	1 1/4″	1/32″	2346A27	34.02
Inch/Metric: *Inches to 16ths zero-centered top and 16ths bottom on front; cm to mm zero-centered top and cm to mm bottom on back.*

Easy-to-Read Rules

See your measurements at a glance. Rules are black with engraved, high-contrast silver graduations for legibility.

Stainless steel rules provide more corrosion resistance and are quick-reading with numbered subdivisions for even easier measuring.

Steel Circumference Rules

Also known as tinners' rules. On the front, these semiflexible steel rules have a full-inch diameter scale on top and corresponding circumference scale on bottom. The back has tables for laying out measures and formulas for calculating circumference, diameter, and area. Rules have deeply etched black graduations and a 1/4″ dia. hang-up hole. Diameter graduations in inches to 16ths on the top; circumference in inches to 8ths on the bottom. Rules are 1 1/4″ Wd. × 0.063″ Thick.

36″ Dia./113″ Circumference	2132A1	Each	$63.42
48″ Dia./150″ Circumference	2132A2	Each	$80.75

Aluminum Tenth-Reading Rules

Aluminum construction means rules are lightweight and rust-resistant. They're rigid with black printed graduations. All have quick-reading numbered subdivisions on the bottom for easy measuring.

Folding Rules

Outside Reading with Extension

Inside Reading

Bend the rules . . . or rather fold them. Rules fold up for convenient storage and transport. All are 5/8″ wide with brass-plated joints (unless noted) and black and red printed graduations (unless noted).

Outside-reading rules have graduations that start on the top slat.

Inside-reading rules have graduations that start on the bottom slat.

Extensions (where available) are 6″ long and make it easier to measure closed-in areas between doors, windows, etc. Wood rule has a brass extension; fiberglass rule has a black plastic extension.

Electronic Map and Plan Measurer

Quickly and easily read distances on maps, plans, and blueprints—simply use the measurer's wheel to trace lines on plans and then get measurements in 111 different scales. Measures in miles, yards, feet, inches, kilometers, meters, and centimeters. Measurer has two user-defined scales, a 7-digit display, and an automatic shut-off. It calculates areas and volumes and can be used as a counter. Operates on two AAA batteries (included).

Optional computer interface kit allows data transmission to a PC. ***Optional carrying case*** is hard plastic.

		Each
Measurer	19895A75	$79.15
Optional Computer Interface Kit	19895A22	63.69
Optional Carrying Case	19895A23	9.92
Replacement AAA Battery	65605T71	.79

Mitutoyo Electronic Scales

Get quick, easy, and precise measurements. Simply mount these scales to almost any surface and slide the encoder/display unit to take measurements; LCD displays to 0.0005″ (0.01 mm). Accuracy is 0.001″/0.03 mm (unless noted). All have a stainless steel blade; zero-set button; ABS (absolute) position, which retains the measuring position even when turned off; an SPC data output port; and a low battery warning. Include one 1.5-volt silver oxide battery and two mounting brackets with 17/64″ dia. holes. ***SPC cable*** transfers data output to SPC processors (SPC processors not included; see 1825A on page 2270).

Replacement 1.5-volt Silver Oxide Battery				21105A201	2.34

♦ Has a sealed IP66-rated housing. Accuracy is ±0.01″/0.25 mm.
♣ Accuracy is 0.002″/0.04 mm.

Electronic Scales with Digital Display

Taking quick and accurate measurements couldn't be easier. Simply attach the scale and encoder to almost any surface, and then position the display control panel up to 10 ft. away. Slide the encoder along the scale to take measurements. Accuracy is ±0.008″/0.20 mm (unless noted).

All scales have a push-button control that allows you to measure fractions (16ths, 32nds, and 64ths), decimal inches (0.0001″), and millimeters (0.01 mm). They include an aluminum blade; an easy-to-read LCD; a 10 ft. long remote cable for the display panel; a zero-set button (set the zero-point at any position); ABS (absolute) positioning, which retains the measuring position even when turned off; and a low-battery indicator. 8971A71 and *A72* mount with a #10 screw; 8971A73, *A74, and A75* with #8 screws. Operate on two AA batteries (not included) or 24 VDC power.

Range	Scale Lg.	Scale Wd.	No. of Mtg. Holes		Each

★ Accuracy is ±0.002″/0.04 mm. ♥ Accuracy is ±0.003″/0.08 mm.

Adhesive-Backed Half-Measure Scales

Rules have graduations that are half the distance of what is shown; thus, a 1″ graduation is actually only ½″, a 2″ graduation is actually only 1″, and so on. Great for finding diameters and centering applications. Permanently mount scales for hands-free use—just peel off the backing and stick them in place. Rules are silver polyester and 1″ Wd.×0.004″ Thick. with black screen-printed graduations.

To Order: For vertical rules, please specify top to bottom or bottom to top.

Actual Lg. (Grads.)	Left to Right	Each	Right to Left	Each	Vertical	Each
Inch: *Half-measure inches to 8ths top and bottom.*

Vertical Rules

Inch/ Metric

Tired of reading sideways when measuring heights and depths? Rules read vertically from top to bottom. All are aluminum with black screen-printed graduations and a ¼″ dia. hang-up hole.

Length	Width	Thick.		Each
Inch: *Inches to 8ths left side; 16ths right side.*				
36″	1″	1/16″	1932A65	$11.83
Inch/Metric: *Inches to 16ths left side; cm to mm right side.*				
40″/1,000 mm	1 1/16″	1/16″	1932A66	15.44

Continuous Vertical Scales

Bottom to Top

Flush ends allow you to form a continuous scale. Plus, they read vertically so they're great for measuring heights and tank levels. Scales are Type 301 stainless steel and 1⅛″ Wd.×1/32″ Thick. with black etched graduations.

Range, Inches/cm	Bottom to Top	Each	Top to Bottom	Each
Inch/Metric: *Inches to 32nds right side; cm to mm left side.*				
0- 48/ 0-120	89665A73	$42.29	89665A77	$42.29
48- 96/120-240	89665A74	42.29	89665A78	42.29

144-192/360-480	89665A76	42.29		

Adhesive-Backed Extra-Thick Vertical Floor Scales

Measuring materials on your floor is no longer a problem—simply adhere these scales to your floor and roll out your material. Scales are extra thick for durability and have a polycarbonate coating for abrasion and chemical resistance. They read vertically, have screen-printed black one-inch graduations on a yellow background, and are 0.012″ thick.

Length	2″ Wide Scales	Each	4″ Wide Scales	Each
12½ ft.	2403A31	$15.00	2403A11	$30.00
25 ft.	2403A33	30.25	2403A13	60.00
50 ft.	2403A34	60.00	2403A14	120.00
75 ft.	2403A35	90.00	2403A15	180.00
100 ft.	2403A36	120.00	2403A16	240.00

Adhesive-Backed Horizontal Scales

Scales permanently mount to any clean, smooth surface—simply peel off the backing and stick them in place. All have black screen-printed graduations that show continuous inches and/or mm, unless stated otherwise. They can be cut to size with scissors or a utility knife. ***Polyester*** scales are water resistant and 0.004″ thick. Scales longer than 1½ ft. come in 3-ft. long segments. ***Vinyl*** scales are water resistant, 0.006″ thick, and come in 7½-ft. long segments. ***Steel*** scales are durable, 0.0075″ thick (unless noted), and come in one full-length segment. ***Paper*** scales are paper stock that you can write on. Scales are 0.007″ thick. The *inch scales* have inches that are continuous from 1″ to 36″ and then repeat every three feet. The *metric scale* has continuous mm that repeat every meter.

★ Black painted graduations.

Stainless Steel Tape Rules

All internal parts, including the blade, are made from corrosion-resistant 300 and 400 series stainless steels. Rules can be washed without harm and resist rust regardless of the environment.

Blade has black graduations on both sides and two end hooks—one facing down and one up. Blade is silver with a nonglare nylon coating that resists abrasion and wear. Case is gray ABS plastic with a blue rubber edge for a sure grip and impact resistance.

Blade Length	Blade Width		Each
Inch: *Inches to 16ths top and bottom on both sides of the blade.*			
16 ft.	1″	6366A34	$16.61
25 ft.	1″	6366A36	19.94
30 ft.	1″	6366A38	22.17

Quick-Read Tape Rules

Never calculate a fraction of an inch again. Unlike other tape rules, quick-read rules include the fraction and decimal (unless noted) on every ⅛″ graduation. Plus, their large vertical numbers (unless noted) make them easy to read at any angle. Blade is yellow with black painted graduations. Rules have locking steel blades, an automatic return with a shock-absorbing stop, and a durable ABS plastic case with a removable belt clip.

Blade Length	Blade Width	Case Color		Each

Stanley Tape Rules

PowerLock

PowerLock w/Blade Armor

Max

FatMax

LeverLock

Rules all have locking blades for easier measuring and a yellow, polyester-coated steel blade with black and red painted graduations (unless noted). All except *LeverLock* rules have an automatic return.

PowerLock— Have a chrome-finish ABS plastic case (unless noted) with belt clip. *Model* 6802A63 has an attached key ring.

PowerLock with Blade Armor— A thermoplastic coating on the first 3″ provides longer blade life and prevents breaking. Blade is designed to remain rigid up to 8 ft. Case is ABS plastic with a chrome finish.

Heavy Duty— Have a chrome-finish cast metal case for added durability.

Stanley— Has a yellow ABS plastic case for high visibility and ridges for a nonslip grip. Blade is plastic-coated steel. Case has a belt clip.

Max— Have fast recoil and a rubber slide lock for increased hook life. Case is yellow ABS plastic with a nonslip rubber grip and belt clip.

Max with Blade Armor— Similar to Max rules, but they also have a thermoplastic coating on the first 3″ that provides longer blade life and prevents breaking. Blade remains rigid up to 8 ft.

FatMax— Have a durable extra-wide blade that remains rigid up to 11 ft. and a hook designed to grab from the top, side, and bottom. They also have fast recoil and an extra-large bumper for increased hook life. Case is yellow ABS plastic with a nonslip rubber grip and belt clip.

FatMax Extreme— Have a durable extra-wide blade that remains rigid up to 13 ft. Plus, a thermoplastic coating (blade armor) on the first 6″ provides extra durability. They also have fast recoil and an extra-large bumper for increased hook life. Case is yellow ABS plastic with a nonslip rubber grip and belt clip.

LeverLock— Have a plastic-coated steel blade that automatically locks when extended and stays locked until you squeeze the bottom release lever. All rules have a yellow ABS plastic case with a belt clip.

▲ Blade is lacquer-coated steel with black painted graduations. ● Case is zinc-plated steel. ♥ Blade has a magnetic tip.

Center-Finding Tape Rules

Quickly find the exact center of your work. Measure the total distance with the upper scale; then find the same number on the bottom scale—that's your center point. Tape rules have a yellow ABS plastic case with a rubber grip and a belt clip; a locking, lacquer-coated steel blade; and automatic return. Blade is yellow with black printed graduations.

Blade Length	Blade Width		Each
Inch: *Inches to 16ths top; half-measure scale on bottom.*			
16 ft.	3/4″	6807A16	$12.59
25 ft.	1″	6807A18	13.89

Special-Purpose Tape Rules

Multifeature

Multifeature— Need to do more than measure? Rule has a top window that allows you to read inside measurements and also includes a compass and level. Plus, it has a folding center point that allows you to turn the rule on the point creating arcs and circles. Case is black ABS plastic. Blade is yellow steel with black and red graduations. It locks and has automatic return.

ADA Code— For convenience, 88 of the most common ADA (Americans with Disabilities Act) specifications are printed on the blade. So at the 6″ graduation, you'll see the specification "6″ max ramp rise w/o handrails" and at the 4-ft. mark you'll see "48″ max (H) of accessible door hardware." Case is yellow plastic with a belt clip. Blade is yellow steel with black and red graduations. It locks and has automatic return.

	Blade Length	Blade Width		Each
Inch/Metric: *Inches to 16ths top; cm to mm bottom.*				
Multifeature	10 ft./3 m	1/2″	2184A12	$22.40

ADA Code	25 ft.	1″	23655A1	20.64

Narrow-Grip Tape Rules

A narrow shape and molded rubber grip give you a comfortable and secure hold when measuring. Rules have a locking steel blade with automatic return and a yellow ABS plastic case. Blade is yellow with red and black printed graduations.

Blade Length	Blade Width		Each
Inch: *Inches to 16ths top; inches to 32nds bottom.*			
25 ft.	1″	6887T11	$18.17
Inch/Metric: *Inches to 16ths top; cm to mm bottom.*			
25 ft.	1″	6887T12	18.17

Magnetic Holder for Tape Rules

No more fumbling as you try to clip your tape rule to your belt. Simply attach the metal adapter to your tape rule and then clip the magnetic holder to your belt. Tape rule "clicks" onto the magnet then snaps off when you need it. Fits most standard tape rules.

19685A2 ..... Each $14.22

Leather Tape-Rule Holder

Protect your tape rule. This leather holder has a rivet-reinforced pocket with safety strap that snaps in place to securely hold rule. It also has belt loops to fit belts up to 3″ wide.

For Tape Rules		Each
20 to 30 ft. Long	6774A15	$6.04

Magnetic Tip for Tape Rules

Don't wait for help—easily measure long distances by yourself with a magnetic tip that snaps onto the end of most 3/4″ and 1″ wide tape rules. Also provides up to 4 lbs. of magnetic pull for picking up metal objects. Color is yellow.

6887T31 ..... Each $2.31

Certified Precision Diameter Tapes

Get precise and accurate diameter measurements easily. Tapes are accurate to ±0.001″ and ±0.03 mm and include a certificate of accuracy traceable to NIST (National Institute of Standards and Technology). They're flexible metal with engraved and acid-etched black graduations that convert circumference distance into diameters. Tapes have a silver finish and include an aluminum canister. To use, simply wrap a tape around your object and match the graduations on the vernier scale and the gauge member to get the diameter value. ***Type 716 stainless steel*** tapes are for corrosive environments.

Also Available: Blue tape with white graduations and white tape with black graduations. For blue tape, please ask for 1982A61 and specify tape diameter range. For white tape, please ask for 1982A81 and specify tape diameter range. Prices for both tapes are approximately 50% higher than the Type 1095 spring steel tapes.

120″	5/8″	0.020″	_____ ____	3519A32 3.50

Diameter Tape Rules

Easily find diameter and linear circumference. ***Pocket size*** measure up to 23″ in diameter and have a yellow steel blade with black painted graduations, automatic return, and a 1 3/4″ Dia. × 3/8″ Thick. chrome-plated steel case. Inch blades are 6 ft. Lg. × 1/4″ Wd.; metric are 2 m Lg. × 1/4″ Wd.

Hook/claw end and ***loop end*** rules, also known as tree tapes, measure up to 6′4″ in diameter and have a 20 ft. Lg. × 3/8″ Wd. steel blade, a manual-wind return, and a 3 3/8″ Dia. × 1 1/8″ Thick. vinyl-covered steel case. *Hook/claw end* rule has a chrome-plated blade with black painted graduations and a pointed end to grab the edge of objects or drive into wood. *Loop end* rule has a black blade with white graduations and a loop on the end. On the circumference side of the rule are diameter inches—each graduation equals 3.14″.

Graduations: Diameter (Front)	Circumference (Back)		Each
Pocket Size			
Inches to 64ths	Inches to 32nds (first foot) and 16ths (thereafter)	6822A17	$17.00
Inches to 100ths	Inches to 32nds (first foot) and 16ths (thereafter)	6822A12	17.00
cm to mm	cm to mm	6822A13	17.00
Hook/Claw End			
Inches to 10ths	Tenths and 100ths of a foot	6832A62	84.98
Loop End			
Inches to 16ths	3.14″ graduations	6832A64	95.35

Pocket Diameter Gauge

Measure the outside diameter of small round- and hex-shaped objects such as rods, drill bits, bolts, and tubing. Measures diameters from 3/32″ to 1 1/8″ and can be clipped to your pocket. To use, slide the thumb rest until the strap tightens on the item, then read the measurement at the thumb rest position. It has laser-etched graduations in inches and millimeters, an aluminum body, and a carbon fiber strap. Overall length is 5 1/2″.

6821A1 ..... Each $14.29

High-Visibility Long Measuring Tapes

You can't miss these tapes—they have a bright yellow or neon orange case. They also have yellow steel blades with black and red painted graduations, easy-wind manual return, and an end hook ring that neatly stores in the contoured mouth of the case. Case is plastic with a belt clip (unless noted).

Blade Lg.	Blade Wd.	Case Color		Each
Inch: *Inches to 8ths.*				
50 ft.	3/8″	Neon Orange	6839A48	$13.80
50 ft.	3/8″	Yellow	6839A68♣	12.09
100 ft.	3/8″	Neon Orange	6839A49	20.34
100 ft.	3/8″	Yellow	6839A69♣	18.59
Inch/Metric: *Inches to 8ths front; cm to mm back.*				
50 ft./15 m	3/8″	Neon Orange	6839A75	14.41
100 ft./30 m	3/8″	Neon Orange	6839A76	21.22

♣ Case is ABS plastic and does not have a belt clip.

Starrett Certified Long Measuring Tapes

Accurately measure long lengths with tapes that include a certificate of calibration traceable to NIST (National Institute of Standards and Technology). Tapes have an extra-long, yellow enamel-coated steel blade with black and red painted graduations and smooth manual rewind. Include a steel case with red vinyl covering.

Graduations	Blade Length	Blade Width		Each
Inches to 8ths	100 ft.	3/8″	1936A3	$56.80
cm to mm	30 m	3/8″	1936A4	67.26

Long Measuring Tapes

Tapes have a manual rewind. ***Fast-winding*** tapes rewind in less time with a specially designed take-up reel and have a center-cutout hand hold.

Fiberglass Blade— Nonconductive, so they're perfect for work near electricity. They have an end hook and a black PVC-coated steel case. Blade is corrosion resistant, washable, and white with black and red graduations.

Yellow and ***Chrome-Plated Steel Blades—*** All of these tapes have a folding hook ring and vinyl-covered steel case (unless noted). *Yellow steel blades* have black and red graduations (unless noted); *chrome-plated steel blades* have black graduations.

Open-Reel Long Measuring Tapes

An open-reel design allows dirt, sand, and other debris to fall away from the case and blade, so tapes are perfect for outdoor measuring jobs. Plus, they have a manual, 3-to-1 rewind for fast take up (unless noted).

The blade is corrosion resistant, washable, and white on the front and yellow on the back with black and red graduations (unless noted) and it has an end hook.

Fiberglass Blade— Nonconductive, so they're great for work near electricity. Case is orange plastic.

Nylon-Coated Steel Blade— Need a more durable tape? A wear-resistant, nonglare, permanently bonded nylon coating makes these flexible steel blades break resistant and they won't stretch or shrink. Case is black plastic (unless noted).

Distance Measuring Wheels

Take one of these wheels for a spin to quickly and easily record distance measurements. Use them on any flat surface both indoors and out. All have rotary counters with a zero reset.

A&B Use for vertical, overhead, curve, and contour measuring. All have a telescoping aluminum handle, plastic wheels, and counters that add as well as subtract.

Style B has dual wheels for increased traction and stability.

C&D Have a steel wheel with a rubber tire, which makes them good for fast, long-run measuring jobs. They also have a folding aluminum handle and kickstand.

Style C have counters that add as well as subtract. *Style D* can handle longer runs and has heavier duty construction.

E&F Designed for extra-long distance measuring over most terrain. They have a steel wheel with rubber tread, a folding aluminum handle, a built-in stand, and an automatic brake that prevents accidental backtracking.

Style F boasts a solid steel hub for easy maneuvering through brush and undergrowth.

G Has a counter on the handle for easy reading and a PVC wheel with chemical- and acid-resistant rubber tread. It also includes a pistol-grip handle, a hold button to stop the counter, a telescoping aluminum handle, a counter reset button, and a kickstand. The counter adds as well as subtracts. Packaged in an impact-resistant black plastic carrying case.

Carrying cases (sold separately below) are made of machine-washable and tear-resistant fabric. Color is black.

Digital Distance Measuring Wheels

Standard

Wheels have a large backlit digital LCD for easier readings. They also have a kick-stand.

Standard— Displays feet, yards, and meters up to 9,999.99. Has a plastic wheel with a rubber tire (39⅜″ circumference). Also has an aluminum handle with a plastic grip. Unit is 26″ long; 41″ when handle is fully extended. Operates on a nonreplaceable battery with a minimum 5 year life.

Deluxe— Displays feet-inches, decimal feet, and meters up to 99,999.9. It also offers a calculation function for area and has permanent memory. Has a steel wheel with a rubber tire (48″ circumference) and a steel handle with a rubber grip. Unit is 42″ long and folds to 21″ for storage. Operates on two AA batteries (not included).

			Each
Standard	2253A37		$68.89
Deluxe	2253A41		196.53
AA Batteries for Deluxe Wheel (4/Pkg)	71455K53	Per Pkg.	2.94

Ultrasonic Distance Finders

Standard

Use sound waves bouncing off solid objects to quickly and easily measure distances in inches, feet, meters, and centimeters. These tools add measurements, plus they compute areas and volumes. Operate on 9-volt batteries (not included). Include an automatic shutoff and a low-battery warning.

Standard tool also measures in decimal feet and yards. Includes an electronic target with LED and a protective pouch. Tool also subtracts measurements and stores up to seven measurements in memory. Accuracy is ±15″ at 250 ft. Use indoors and out. ***Tool with laser targeting*** has a high-visibility laser to indicate where you are aiming. It stores two measurements to add together, or three measurements for computing area and volume. Accuracy is ±½″ at 50 ft. Use indoors.

	Max. Dist.	Batteries Req'd.		Each
Standard	250 ft.	2	68105A15	$114.49
W/Laser Targeting	50 ft.	1	68105A16	47.79
9-Volt Battery			71455K56	2.75

Digital Pedometer

Record distances from 0.01 to 1,000 miles while you walk or run. This pedometer has a 1- to 6-ft. stride adjustment and belt clip. 1.5-volt battery included.

Pedometer	8458T9	Each	$13.50
Repl. 1.5-Volt Battery	7604K3	Each	1.90

Laser Distance Finders

1

2&3

4&5

Stay where you are and let a laser do the work. These distance finders send a pulse of laser light at an object and then digitally display distance.

(1) Laser Distance Finder— Look through the viewfinder and press the power button—the distance to the viewed object will appear in your view. Includes a carrying case.

(2-5) Multi-Function Laser Distance Finders— Include a holster, wrist strap, batteries, and a manual. All styles have addition and subtraction keys, square and cubic feet calculations, and an illuminated display. They perform single distance measuring as well as indirect measuring, which is useful when the distance to be measured is difficult or dangerous to access. *Style 2* has a continuous measurement function and can store up to 10 values. *Style 3* has an inclination sensor that measures tilts between ±45°. Can display horizontal distance and has a room corner angle function. Finder can store up to 20 values. *Style 4* has a color TV screen with crosshairs that make it easy to view outdoors when the laser is difficult to see. Also takes horizontal measurements. Stores up to 20 values. *Style 5* has a digital color viewfinder with up to 4X magnification for aiming at distance targets. It can store up to 30 values. Also includes bluetooth data transfer to transmit measured values to a pocket PC or laptop without wires; software included. *Note:* For targets over 150-200 ft. or irregular, transparent, and mirrored surfaces, a target plate (sold separately, unless noted) is needed for Styles 2, 3, 4, and 5.

	Maximum Distance	Unit of Measure	Accuracy	Battery Size	Battery Included	Finders	Each	Batteries	Each

★ Target plate is included.

Material Length Counters

Single Wheel

Double Wheel

Arrow indicates direction material travels.

Accurately measure cloth and paper as well as other sheet, roll, and strip materials. All counters add as well as subtract and have a zero reset. They also have an 18″ long support arm, and a mounting bracket with two ⅜″ mounting holes (fasteners not included). Maximum rpm is 3,000.

Solid aluminum wheels are for coarse and high-temperature materials. Surface is knurled for good contact. *12″ circumference wheels* have a ⅝″ wide tread. *18″ circumference wheels* have a ¾″ wide tread.

Plastic wheels with rubber tread are for paper, cloth, and other smooth materials. Wheels have a ¾″ wide tread.

Plastic wheels with polyurethane tread are for textured, coarse, and abrasive materials. They're also good for jobs with pressure rollers. Wheels have a ⅝″ wide tread.

Remote-Reading Length Measurer

Measurer with Electromechanical Counter

Accurately and easily take length measurements on paper and printing machinery, conveyors, and more. Measurer includes a rotary contactor, a wheel, and a mounting bracket; connects to a remote counter (sold separately). When the wheel makes one complete revolution over the material you're measuring, the rotary contactor sends a signal to the counter to add one. Size is 8 9/32″ Lg. × 7 9/32″ Wd. × 3 13/16″ Ht.

The contactor has a 5/16″ dia. shaft and two 12″ wire leads for connecting to your counter. It's 3 3/16″ Lg. × 2″ Wd. × 2″ Ht. and operates up to 2,400 rpm (or 2,400 feet/minute). The wheel is 12″ in circumference and moves 12″ per revolution. It's aluminum with a 1/2″ wide rubber tread and a 5/16″ dia. center hole. The mounting bracket is cast iron and has four 0.221″ dia. mounting holes (fasteners not included). Holes are 1 1/2″ center-to-center. Bracket is 7″ Lg. × 7 9/32″ Wd. × 3 1/2″ Ht.

Electromechanical counters include a reset button, display six digits, and make 600 counts/minute. Size is 1.14″ Ht. × 3.1″ Wd. × 2.3″ Dp.

Digital counter includes a reset button, displays six digits, and can make 2,400 counts/minute. Size is 1.75″ Ht. × 3.81″ Wd. × 2.97″ Dp.

		Each
Length Measurer	8690T23	$406.68

Replacement Rotary Contactor	8690T16	237.87
Replacement Wheel	8690T17	73.17
Replacement Mounting Bracket	8690T15	120.95

Liquid-Level Scales

Built to take environmental abuse, these scales are iron with a white porcelain-enamel finish for rust resistance. Scales are 2 1/2″ Wd. × 0.075″ Thick. and have holes (use No. 8 round head screws; not included) for mounting to walls, piers, and other wood structures. They have black painted graduations that read vertically bottom to top.

Range		Each	Range		Each

6.66-10 ft.	1975A16	45.77			

Tank-Level Scales

Always know the level of your tank—just stick a tank-level measuring scale directly to the outside of your tank. They're bright-yellow, weather-resistant vinyl with black screen-printed graduations in inches with numerals at every 5″ interval. They have an acrylic adhesive back for adhering to most surfaces. Use scissors or a utility knife to cut to the size needed.

Wire, Cable, and Cord Length Measuring Units

Quickly and accurately measure lengths of wire, cable, cord, rope, hose, tubing, and similar materials. To make handling your material even easier, add a feeder or coiler reel (sold separately) to one of the length measuring units. Or get a complete measuring kit, which includes everything you'll need.

Length Measuring Units

Feed material through the two pressure wheels inside the length measuring units and a 6-digit counter records length up to 10,000 ft. (unless noted). Units add and subtract. Meet National Bureau of Standards specifications. ***Units with urethane-coated wheel*** are for PTFE-coated wire and fiber-optic cable.

	Material OD Range	With Steel Wheel	Each	With Urethane-Coated Wheel	Each
For Wire	1/64″-1/2″	1686T15	$321.79	1686T77	$487.22
For Wire	1/64″-1/2″	1686T31 ♦	398.78	1686T78 ♦	564.50
For Cord and Rope	1/4″-3/4″	1686T22	252.97	—	—
For Wire, Cable, and Hose	1/2″-2″	1686T37 ■	1,124.85	1686T79 ■	1,449.52

Optional 14″ High Bench-Mount Pedestal	1686T17 ●	41.63
Optional 22 1/2″ High Floor Stand (Use with Pedestals)	1686T96	394.68
Optional 36″-43″ High Adjustable Floor Stand for 1686T37 and 1686T79 Only	1686T32	267.02

♦ Unit includes a cutter; cutter not for steel wire or armored cable.
■ Counter records lengths up to 100,000 ft. ● Not for use with 1686T37 and 1686T79.

Length Measuring Unit (1686T15)

Length Measuring Unit (1686T31)

Length Measuring Unit (1686T22)

Length Measuring Unit (1686T37)

Bench-Mount Feeder Reels

Smoothly feed your materials into the length measuring units (sold separately above) with a feeder reel. They have a friction disc to prevent free spinning; remove disc for free rotation. Reels also have a 1/2″ dia. post for material on a spool and four adjustable pins for materials not on a spool. Pins adjust for inside coil diameters. Include a bench-mount pedestal.

Max. Coil OD	Coil ID Range	Coil Weight Capacity		Each
15″	6 1/2″-10 1/2″	75 lbs.	1686T5	$177.51
24″	6 1/2″-18 1/2″	150 lbs.	1686T65	221.27

Bench-Mount Collapsible Coiler Reels

Use a coiler reel to pull your material out of the measuring units (sold separately above) and bundle it into coils. Reels have a hand crank and collapse for storage. Include a bench-mount pedestal.

Coil ID	Coil Weight Capacity	Maximum Reel Capacity		Each
8″	50 lbs.	150 ft. of 3/8″ Dia. Materials and Up to 10″ Wide Spools with 1/2″ Dia. Hole	1686T4	$333.57
8″	50 lbs.	125 ft. of 1/2″ Dia. Materials; 550 ft. of 1/4″ Dia. Materials	1686T12	298.74

12″	125 lbs.	250 ft. of 3/4″ Dia. Materials; 500 ft. of 1/2″ Dia. Materials	1686T66	356.51
15″	125 lbs.	300 ft. of 1″ Dia. Materials; 550 ft. of 3/4″ Dia. Materials	1686T25	442.93

Optional 22 1/2″ High Floor Stand

Optional Adjustable Floor Stand

Complete Length Measuring Kits

Everything you'll need to create a complete length measuring system. Each kit contains a length measuring unit for wire (1/64″-1/2″ OD), a feeder reel, and a coiler reel with 12″ maximum coil ID (500 ft. capacity of 1/2″ dia. materials). *Bench-mount kits* include two 14″ high bench-mount pedestals (one for each reel) for bench-top mounting. *Floor-mount kits* include the two pedestals and a 22 1/2″ high floor stand.

Units with urethane-coated wheel are for use with PTFE-coated wire and fiber-optic cable.

	Feeder Reel Dia.	With Steel Wheel	Each	With Urethane-Coated Wheel	Each
Bench-Mount Kit	15″	1686T71	$856.68	1686T76	$989.63
Bench-Mount Kit	24″	1686T41	883.57	1686T92	1,026.90
Floor-Mount Kit	24″	1686T11	1,238.21	1686T94	1,362.58

Length Measuring Unit with Bench-Mount Pedestal

Liquid-Level Tapes

Tape Rule with Inage Plumb Bob

Also known as oil-gauging tapes, these tapes check the level of heavy or light oil and other fluids in deep, large containers such as tanks and vats. All tapes have a zinc-plated steel reel with double rollers, a safety-yellow plastic handle with grounding wire, and a 1/2″ wide blade that locks in place when you flip the handle. Include a brass plumb bob with etched inch graduations. *Note:* For metric measurements, you need to order a metric brass plumb bob sold separately below.

Inage tapes determine depth of liquid inside a tank. They do not require you to know the height of your tank. All inage tapes have a cylindrical plumb bob, which is attached to the end of the tape and is used to find the bottom of the tank. The tape then measures the height of the liquid from the bottom of the tank to the liquid surface.

Outage tapes determine how much liquid has been removed from a tank. They require you to know the height of your tank. All outage tapes have a rectangular plumb bob, which must be in contact with the liquid surface. Add the number from the tape reading to the number from the bob reading to determine how far the liquid surface is located from the top of the tank. Then subtract this number from the overall tank height to determine the liquid level.

Chrome-Plated Steel Tapes— The choice for measuring dark oils and fluids.

Combination Chrome-Plated and Black-Finish Steel Tapes— Excellent for light as well as dark oils and fluids.

Etched Black-Finish Steel Tapes— Great for measuring clear oils and fluids.

Etched Stainless Steel Tapes— Rustproof and noncorrosive, they're good for clear and dark oils and fluids.

Note: A stainless steel inage plumb bob is sold separately.

Replacement Blades— Do not include plumb bobs.

Tape Wiper Attachments

Fiber Pad Wiper Rubber Roller Wiper

Wiper attachments strip excess oil off tape as it is reeled in. Fit all gauging tapes.

Fiber Pad Wiper	20655A21	Each	$13.76
Repl. Fiber Pads	20655A22	Per Pair	$4.50
Rubber Roller Wiper	20655A11	Each	$17.55
Repl. Rubber Rollers	20655A12	Per Pair	$5.81

Water and Gasoline Finder Paste

Quickly and easily determine water or gasoline levels in your tanks. Apply a thin layer of finder paste to a gauging tape or stick (not included) and insert the tape or stick into your tank for 30 seconds. Remove the tape or stick—the paste changes color to indicate fluid level.

Water Finder Paste (3-oz. Jar)	89775A15	Each	$3.05
Gasoline Finder Paste (3-oz. Jar)	89775A17	Each	$3.90

Fiberglass Depth-Measuring Ropes

Measuring depths doesn't get easier—simply attach a plumb bob or weight (not included) to the rope's end-hook snap ring and you're ready. Ropes are lightweight fiberglass with a nonglare, textured vinyl coating for abrasion resistance. They have black and red printed graduations.

Depth Gauges

Standard with Rule Starrett

Gauges take precise depth measurements in small holes and slots and measure 30°, 45°, and 60° angles with a protractor. All have black etched graduations in 32nds and 64ths. *Rods* measure the depth of recesses where blades won't fit.

Standard Gauge with Rule— Has a 6″ Lg. × 1/4″ Wd. stainless steel rule with a 2 1/2″ wide steel base.

Standard Gauge with Rule and Rod— Has a 6″ Lg. × 7/32″ Wd. steel rule, a 2 1/2″ Wd. base, and a 6″ Lg. × 3/32″ Wd. steel rod.

Starrett No. 236HB Gauge with Hook Rule and Rod— Includes a 6″ Lg. × 3/16″ Wd. tempered steel hook rule, a 2 5/8″ wide base, and a 6″ Lg. × 5/64″ Dia. rod.

		Each
Standard Gauge with Rule	20445A41	$18.12
Standard Gauge with Rule and Rod	20445A46	17.90
Starrett No. 236HB Gauge with Hook Rule and Rod	2090A2	76.00

Drum- and Tank-Level Measuring Sticks

Sticks fold up for storing and are made of wood with a clear varnish coating that's resistant to gasoline, diesel fuel, and oil. They are 7/8″ Wd. × 5/8″ Thick. (1 1/4″ thick at folding joint) and have black painted graduations that read vertically bottom to top.

Measuring Length	Overall Length	Folded Length		Each
Gallon: *Gallons front and back.*

15 ft.	16.5 ft.	4.7 ft.	1923A57	22.20

♣ Full length; stick does not fold.

Starrett Precision Combination Squares

Replace your try square, miter square, depth gauge, height gauge, center-point finder, and level with just one tool.

Heads have a reversible lockbolt. *Forged steel heads* are hardened and last much longer than cast iron heads, especially in abrasive applications. *Square heads* also include a level vial and steel scriber (except heads for 4″ long blades). ***Blades*** are steel with a nonglare finish (unless noted). They have black etched graduations and meet Fed. Spec. GGG-R-791G for accuracy.

Quick-reading rules have numbered subdivisions.

Two-Piece Sets— Square head and steel blade.

Three-Piece Sets— Square head, center head, and steel blade.

Four-Piece Sets— Square head, center head, steel blade, and protractor head with a direct-reading double 180° scale and a level vial.

Titanium-Coated Combination Squares

Thanks to a protective titanium nitride coating you won't have to worry about scratches or corrosion on the blade.

Two-Piece Set— Includes a cast iron square head with a level vial and a stainless steel scriber. It also has a 12″ long steel blade with white etched graduations in inches to 8ths and 16ths on front; quick-reading inches to 32nds and 64ths on back. Includes a plastic case.

Four-Piece Set— Includes everything in the two-piece set plus a cast iron center head and a cast iron reversible protractor head. The protractor head is graduated from 0°–180° in both directions.

Two-Piece Set	21155A34	Each	$99.74
Four-Piece Set	21155A36	Each	$175.41

Carpenters' Combination Squares

Why settle for just a square when you can get a try square, a miter square, a depth gauge, a marking gauge, a 90° level, a rule, and a scriber all in one tool?

Two-Piece Sets— Include a cast-zinc square head (unless noted) with level vial, steel scriber, and reversible lockbolt. Also have a stainless steel blade (unless noted) with black etched graduations. Head is black.

Four-Piece Set— Includes an aluminum square head with level vial, steel scriber, and reversible lockbolt; a reversible cast-iron protractor head with double 180° scale, level vial, and reversible lockbolt; an aluminum center head with reversible lockbolt; and a steel blade with black etched graduations. Heads are black.

● Steel blade. ■ Square head is aluminum.

Magnetic Combination Squares

Three 20-lb. magnets per head hold this square on any ferrous metals. Squares have one or two (see below) die cast aluminum square heads with reversible lockbolts. Heads move in and out to butt up to your workpiece. Blades are heat and splatter resistant, won't warp or pit, and have black silk-screened graduations.

Carpenters' and Rafter Squares

Also known as framing squares, these have one leg that's ½″ wider than the other. The wider leg is 1½″ wide for 8″×12″ squares; 2″ wide for 16″×24″ squares; the wider leg is also the longer leg.

Carpenters' squares have a silver finish with stamped graduations on the front (unless noted). 2364A48 is extra thick to resist bending and twisting. ***Rafter squares*** include rafter framing tables. *Models* 2006A14 and 2006A15 also have a 100ths scale as well as a brace measure table. Graduations are only on the front. 2006A14 has a silver finish with black etched graduations; 2006A15 has a blue finish with gray etched graduations; 2006A67 has a silver finish with black stamped graduations; 2006A21 has a blue finish with white graduations.

Combination Square with Angle Finder

Need a try square *and* an angle finder? With four 0° to 90° quadrants, this try square can find any angle between 0° to 360°. It has a cast iron head with built-in clear plastic angle finder, a reversing lockbolt, and a steel scriber. On the back of the angle finder is a chart converting angle to pitch. Tool also has a 12″ long steel blade with etched black graduations on the front in inches to 16ths and quick-reading 32nds, plus mm.

2004A11 ..... **Each** $18.67

Pipefitters' Square

Square with Holder

The name might say "pipefitters" but boilermakers and welders also find this versatile square useful. Square is Type 314 stainless steel with black etched graduations that show pipe fitting sizes, pipe cuts, inches, and mm. It also has 22 printed charts including weld tee, 45° weld ell, 150-lb. and 300-lb. weld neck flanges, OD of 150-lb. and 300-lb. flanges, diameter of 150-lb. and 300-lb. slip blinds, and bolt charts. Size is 15½″×24″.

Optional magnetic holder keeps square in place with two 25-lb. magnets. Use on 1″ dia. or larger ferrous pipe. Holder is aluminum and 7″ Lg.×½″ Wd.×10″ Ht.

Square ..... **1946A25** **Each** $120.00
Optional Magnetic Holder ..... **8990A61** **Each** $117.73

Sliding T-Bevel

T-bevel slides to adjust to any angle; then it locks in place to duplicate or transfer the angle. It has a 5½″ long wood handle with an inlaid brass tip and an 8″ long stainless steel blade with a corrosion-resistant finish.

2020A2 ..... **Each** $13.24

Square Holding Clamps

Get uniform results in repetitive layout work. Attach clamps to any carpenters' or rafter square to fix a position for repeat marking. Clamps are solid brass.

8985A51 ..... **Per Pair** $4.19

Folding Layout Squares

Unfold and lock in place to use, and then fold into the profile of a rule for easy storage. Squares are aircraft-quality aluminum.

Standard square is 2″ Wd.×⅛″ Thick. and measures 90° angles. Unfolded size is 3 ft.×4 ft.×5 ft.

2200A1 ..... **Each** $62.61

Mini square is 1½″ Wd.×3/16″ Thick. and measures 45° and 90° angles. It has etched graduations in inches to 32nds. Unfolded size is 16″×16″×22⅝″.

2200A2 ..... **Each** $42.23

Precision Bevel Protractors

Take precise angle measurements of machines, molds, jigs, and more. Protractors have a dial with 360° graduations (in 0° to 90° sectors) and a vernier scale for readings to 5 minutes. The dial also rotates in a full circle and slides up and down the full length of the blade, locking in place with a knurled thumb lock. Blade is beveled at 45° on one side and 60° on the other. Both protractors are stainless steel with a satin chrome finish on the dial and vernier scale for easy reading. Include a protractor head with magnifier in a case.

Pro-value protractor kit includes 6″ and 12″ long blades, plus an acute-angle attachment. ***Mitutoyo protractor*** includes a 6″ long blade.

Adhesive-Backed Protractor Dials

360° Counter-clockwise

Stop hunting for your protractor dial. With an adhesive back, these dials permanently mount to any clean, smooth surface and measure angles in 1° increments. All are white vinyl with black screen-printed graduations and have a polyester coating for abrasion and chemical resistance.

Dia.	Center Hole Dia.	Thick.	360° Clockwise	360° Counter-clockwise	180° Dual Direction	Each
3″	¼″	0.014″	**20045A31**	**20045A41**	**20045A51**	$10.17

6″	¼″	0.014″	**20045A34**	**20045A44**	**20045A54**	12.68
8″	¼″	0.014″	**20045A35**	**20045A45**	**20045A55**	13.93

Try Squares

Mark angles, test angle accuracy, and check work being planed square. Squares are stainless steel with stamped graduations (unless noted). Blades are square both inside and out. ***Squares with polystyrene handle*** include an acrylic vial for level, plumb, and 45° work.

Blade Lg. (A)	Handle Lg. (B)	Handle Material		Each
Inch: *Inches to 8ths and 16ths on both sides.*				
8″	5″	Wood	**8994A64**♣	$15.51
Inch: *Inches to 8ths on both sides.*				
8″	5¼″	Polystyrene	**8994A82**	7.71
Metric: *mm on both sides.*				
200 mm	133.4 mm	Polystyrene	**8994A85**	7.71

♣ Etched black graduations.

Protractors

Easily set bevels and transfer angles. Protractors have black etched graduations from 0° to 180° in both directions and a 6″ long adjustable blade; knurled locking nut adjusts blade. Head is 3⅜″ Wd.×2″ Ht. Protractors with gauges have black etched graduations in inches to 32nds and 64ths for use as a depth gauge. ***Starrett*** are steel with a satin-chrome finish. ***Stainless steel*** are Type 410 stainless steel with a plain finish (unless noted).

Head Style	Starrett No.	Starrett	Each	Stainless Steel	Each
Half Round	C19	**2197A12**	$69.01	**8517A59**	$13.91
Rectangular	C183	**2197A11**	72.00	**8517A58**	12.94
Rectangular w/Gauge	C493B	**19265A21**	72.00	**8516A51**♦	17.82

♦ Type 301 stainless steel.

Extra-Large Protractors

Are regular-sized protractors just not measuring up? Get an extra-large protractor to handle jobs such as sheet metal fabricating and pipe bending with accuracy. They have an adjustable pointer to zero the tool and aluminum arms that lock into position. Markings are black.

One-arm protractor projects 0° to 90° angles within ¼°. The head is 9″ square with graduations in inches to 16ths and in centimeters on the edges for linear measuring. ***Two-arm protractors*** rotate 270° in ½° increments to measure and create inside and outside angles.

No. of Arms	Arm Length		Each
One	37½″	**8518A2**	$104.95
Two	18″	**8518A5**	97.50
Two	36″	**8518A3**	157.95

Six-Way Gauge and Rule

Made of Type 301 stainless steel, this pocket-sized tool is 5¾″ long and does the work of the following tools:

Bevel Protractor—For measuring and laying out angles.
Circle Divider—Divides circles in up to nine equal parts.
Center Finder—Locates centers on shafts and circles.
59° Point Gauge—For checking drill point angles.
Square—Position arm at 90° to check right angles.
4¾″ Rule—Graduated in quick-reading inches to 64ths and mm.

2106A11 ..... **Each** $10.93

Adjustable Angle Indicators/Rules

Like a portable drafting table, indicators/rules define, measure, and make any angle in seconds with ±0.005° accuracy or 1/16″ per length of tool. Simply rotate the blades to the desired angle, tighten the screw, and then read the dial. Blades rotate 360° in either direction. Tools are plastic with a locking brass screw head.

Closed Size, Lg.×Wd.×Thick.		Each
7″ ×1⅞″ ×0.030″	**20055A11**	$8.33
12″ ×1⅞″ ×0.040″	**20055A12**	13.55
18″ ×2″ ×0.080″	**20055A13**	17.66
23⅝″ ×2″ ×0.080″	**20055A14**	22.89

Layout and Staining Fluids

Layout Fluids— Fast-drying, see-through fluids have a deep, uniform color. Use them to scribe sharp, precise lines on dies, templates, tools, and machine parts.

Staining Fluids— Get instant visual identification by staining bearings, springs, nuts, and other components. Fluids repel oil, adhere without flaking and scaling, and won't interfere with part performance. *Opaque* fluids conceal the color of the part. *Transparent* fluids allow the color of the part to show through and are slightly thinner and faster drying than opaque.

To Order: Please specify color.

Size	Available Colors		Each
Layout Fluids			
2-oz. Fluid with Felt Tip Applicator	Blue, Red	2131A74	$5.65
4-oz. Fluid with Brush in Cap	Blue, Red	2131A61	6.80
8-oz. Fluid with Brush in Cap	Blue, Red	2131A62	9.45

1-gal. Fluid	Black, Dark Blue, Green, Purple, Red, Yellow	2131A2	75.13

High Spot Blue Marking Paste

Also known as Prussian blue, this paste marks high surfaces and interference spots on precision fittings such as bearings, gears, and valves. Coat the parts and assemble them into working position. Any improper fit will show up as a blue streak.

Paste won't dry up and works even after extended periods of time. Remove paste with soap and water or with the 19215A series cleaners on this page. Comes in a 0.75-oz. tube.

6165K11 ..... **Each** $5.45

Layout and Staining Fluid Remover and Cleaner

Removes and thins the layout and staining fluids sold on this page. Aerosol spray also cleans surfaces in preparation for fluid application.

Size		Each
16-oz. Aerosol Spray (Net 12 oz.)	19215A21	$10.75
1-qt. (930 ml) Can	19215A79	10.92
1-gal. Bottle	19215A18	30.23
Optional Empty 5-oz. Bottle with Applicator Brush	19215A251	13.43

Scribers

Steel Tipped Scribers— For marking steel and plastics; also good as a general purpose pick for cleaning and probing.
Carbide Tipped Scribers— For marking hardened steel, stainless steel, and ceramics. Outlasts steel in similar applications.
Diamond Tipped Scribers— For marking virtually any surface, even glass and the hardest tool steels. Outlasts carbide.

Steel Tipped

90° Hook and Straight Point Steel Tipped Scriber— Has a 90° hook point on one end, a straight point on the other end, and a knurled aluminum body. Length is 8″.

6808A12 ..... **Each** $3.53

90° Hook and Straight Point Steel Tipped Scriber with Adjustable Handle— Same as 6808A12, except handle has a knurled sleeve that can be positioned anywhere between the two ends. Length is 8¼″.

Scriber ..... 6808A11 **Each** $5.53
Repl. Steel Point ..... 6808A31 **Each** $3.51

Combination Scriber and Scraper— Has a needle-sharp hardened steel scriber on one end and an angled chisel scraper on the other. The body is knurled steel. Length is 6½″.

19375A11 ..... **Each** $4.12

Curved Hook and Straight Point Steel Tipped Scriber— With a hook on one end and a steel-point scriber on the other, this tool is particularly good for oil seal removal and spring adjustments. Has a knurled aluminum body. Length is 8″.

6808A13 ..... **Each** $3.65

Compact Steel Tipped Scriber— Has a solid-locking, chuck-style knurled aluminum handle. Point reverses for storage. Head is hex shaped to prevent rolling. Length is 3¾″.

Scriber ..... 6808A14 **Each** $3.86
Repl. Steel Point ..... 6808A32 **Each** $0.63

Carbide Tipped

Carbide Tipped Scribers— Have a knurled aluminum body, a chuck-style nose that holds the point, and a pocket clip. Available with or without a magnet at one end for retrieving ferrous particles from hard-to-reach places. Length is 5½″.

		Each
Scriber	2157A11	$5.79
Scriber with Magnet	2157A12	7.45
Repl. Carbide Point	2157A14	3.52

Retractable Point Carbide Tipped Scriber— Point retracts just like a ball-point pen to protect it when not in use. Scriber has an aluminum body, a knurled grip, and a pocket clip. Length is 6½″.

Scriber ..... 1981A51 **Each** $23.36
Repl. Carbide Point ..... 1981A81 **Each** $10.70

90° Hook and Straight Point Carbide Tipped Scriber— Has a 90° hook point on one end, a straight point on the other end, and a smooth hexagonal aluminum grip. Length is 6″.

68085A65 ..... **Each** $15.61

Compact Carbide Tipped Scriber— Has a solid-locking, chuck-style knurled aluminum handle. Point reverses for storage. Head is hex shaped to prevent rolling. Length is 3¾″.

Scriber ..... 6808A15 **Each** $7.22
Repl. Carbide Point ..... 2157A14 **Each** $3.52

Diamond Tipped

Retractable Point Diamond Tipped Scriber— The point retracts into the black-coated brass body to protect it when not in use. Includes a pocket clip. Length is 5¼″.

		Each
Scriber	1984A16	$20.10
Repl. Diamond Point	1984A17	9.04

Fixed-Point Diamond-Tipped Scriber— Has a plastic body with a cap to protect the point when not in use. Point is not replaceable. Length is 5⅜″.

2018A51 ..... **Each** $9.39

Combination Tipped

Combination Diamond and Carbide Tipped Scriber— Twist the scriber once for a polished, cone-point diamond; twist again to retract diamond point and get a carbide point. Body is plastic with a rubber comfort grip. Includes a pocket clip. Length is 4½″.

		Each
Scriber	2344A11	$22.04
Repl. Diamond Point	2344A42	8.89
Repl. Carbide Point	2344A52	9.67

Interchangeable 5-Piece Scriber Sets

Why settle for one scriber when you can get four? These versatile sets include a knurled aluminum hexagon handle with four interchangeable steel points: straight, 90°, hook, and double angle. Come in a vinyl pouch.

Magnetic set has a magnetic tip on the handle to retrieve ferrous particles.

	Longest Assembled Length		Each
Standard	7½″	68095A69	$6.89
Magnetic	7⅝″	68095A68	8.09

Scriber, Punch, Magnet, and Rule Set

Get four popular tools in a vinyl pocket case for go-anywhere convenience. Each tool has a pocket clip.

Set includes:

Scriber— 5 5/16″ long scriber with a carbide point that reverses for storage and a knurled aluminum handle.

Punch— 5¾″ long adjustable-force center punch with a steel point and an aluminum handle.

Magnet— Magnetic-tipped retriever that extends from 5½″ to 23½″ and has a nickel-plated steel handle.

Rule— 6″ long flexible stainless steel rule that's graduated in inches to 32nds and 64ths.

3458A11 ..... **Each** $31.18

Scribing Gauge

Also known as a marking gauge, this gauge easily draws precise straight lines. Simply lock the sliding head in position at the length desired on the 5/16″ Dia.×6¼″ Lg. bar; then drag the gauge along the edge of your surface to scribe a straight line. Includes a needle point that scribes on wood, metal, and plastic. Bar is made of nickel-plated steel and is graduated in inches to 16ths up to 5″.

		Each
Scribing Gauge	2011A1	$16.37
Replacement Needle Point	2011A22	.86

Awls

Scribe lines in metal and wood and punch soft materials.

Wood-Handle Awl— Handle is contoured for a comfortable grip. Blade is alloy steel; it runs through the handle and is attached to a steel ferrule and cap.

Plastic-Handle Awl— Has a chrome-plated alloy steel blade that's anchored in a tough, screwdriver-style handle.

All-Steel Awl— Constructed from one piece of carbon steel, this rugged awl has a flat head that withstands hammer blows.

	Blade Lg.	O'all Lg.		Each
Wood Handle	3¾″	6½″	19195A21	$6.29
Plastic Handle	4″	7 13/16″	19195A22	7.15
All Steel	3¼″	7″	19195A23	7.13

Marking Compasses

Compass and Scriber— Has a full-length, hardened steel scribing pin and a wing nut for tension adjustment. Made of brass-plated steel. Pencil not included.

Standard Compass— Attach the included pencil and you're ready to draw. It has spring-tension adjustment and a scribe guide for edge marking. Made of die cast, rust-resistant zinc.

Precision Compass— Has a knurled center wheel for micro-setting. Made of nickel-plated brass. Includes three leads for scribing and two needle points.

	Max. Circle Dia.		Each
Compass and Scriber	8″	19755A43	$3.33
Standard Compass	9″	89675A65	5.58
Precision Compass	10⅜″	1210T4	18.10

Precision Straightedges

Straightedges make scribing straight lines, making straight cuts, and checking surfaces for straightness a snap. All include a hang-up hole, except the tool steel edges.

Beveled Edge— Allows clearance for marking.

▲ Tolerance of straightness (+/–) over entire length of straightedge.

Beam Compass

Draw up to 48″ dia. circles with this rigid, lightweight compass. Create even larger circles by connecting additional extension beams (sold separately); one beam coupling is required for each additional extension beam. Compass includes two 13″ long beams, one beam coupling, a set of trammels with needle points, a ruling pen, lead tips, and a protective plastic case. All beams are made of extruded aluminum.

			Each
Beam Compass	89645A65		$33.08
13″ Extension Beam	89645A67		9.96
26″ Extension Beam	89645A68		21.00
Beam Coupling	89645A66		6.50
Replacement Lead (4/Pkg.)	1210T82	**Per Pkg.**	$2.27

Tape Rule Marking Compass

Drawing large circles couldn't be easier—simply pull tape out to desired distance; a lock holds the tape in position. Includes a steel pin for securing the compass and a 2 mm lead point for marking. Compass has a 3½″ to 72″ radius range and 144″ maximum circle diameter. Graduated in inches to 32nds top and mm bottom. Size is 4½″ Lg.×2″ Wd.

2127A12 ..... **Each** $32.78

Extra Large Marking Compasses

Spring tension joints allow compasses to stay rigid for accurate circles, and then fold for easy storage. Holder accepts the included soapstone crayon as well as any round or flat soapstone or pencil. Made of lightweight, rustproof aluminum.

Max. Circle Dia.		Each
22″	8989A69	$23.80
50″	8989A71	41.57
100″	8989A73	66.81

Trammels

When you need to accurately transfer measurements, scribe arcs, and lay out circles that are too large for ordinary compasses and dividers, these trammels get the job done.

***A** Trammels with 6″ Points*—Clamp these adjustable trammels onto any 5/8″ to 1 1/2″ thick beam (beam is not included). Set includes two 6″ long steel points that are off-center to allow fine adjustments. The points may be replaced with a pencil, pen, or soapstone. Trammels are zinc.

2023A24 ..... **Per Set** $35.63

***B** Trammels for Machinists' Rule*—Attach to your graduated rule for precision measurements. Trammels fit on any rule from 1/2″ to 1 1/8″ wide (rule is not included). Set includes two steel scribe points and two lead points; the points reverse into the body for storage. Trammels are aluminum.

19355A52 ..... **Per Set** $16.62

***C** Starrett Steel Beam Trammels*—Include a beam that has a flattened top; when clamped on the beam, trammels won't turn from pressure on points. Points are adjustable and may be replaced with the included caliper legs. Trammels are steel with a knurled swivel grip; one per set has a screw for fine adjustment of the point.

Beam Lg.	Max. Circle Dia.	Starrett No.		Per Set
10 1/2″	18″	C251A	**2124A11**	$149.01
14 1/2″	26″	C251B	**2124A12**	169.01
20″	36″	C251C	**2124A13**	172.00

***D** Pipe Bar Trammels*—Clamp trammels onto 6″ or longer 1/2″ pipe size (0.84″ OD) to mark circles 1 1/2″ dia. and larger. Set includes two aluminum heads; one head is stationary with a hardened-steel center point and the other is movable and holds a marking tool. A steel scribe, a soapstone, and an Allen wrench are included.

1920A42 ..... **Per Set** $47.54

Wing Joint Dividers

Transfer and scribe perfect circles and arcs for your layouts. Made from forged and polished steel, dividers have hardened points plus a knurled nut and tempered spring for fine adjustments.

Leg Lg.	Max. Circle Dia.		Each
6″	15 7/8″	**2022A1**	$41.25
8″	22 1/2″	**2022A3**	42.44
10″	24″	**2022A4**	45.35
12″	29 5/8″	**2022A5**	45.50

Pipe Flange Aligner Pins

Position your pipe flange perfectly—vertically and horizontally. Each of these nut-and-bolt pins consist of two steel halves that connect in the center. Just insert a pair of pins into adjacent flange holes and tighten; one pin in each pair has a bubble level for vertical alignment.

Pins—Use with your level to align flange horizontally.

Pins with Horizontal Level—Include a pair of pins and a steel rod with a built-in level for fast horizontal alignment.

For Flange Hole Dia.	Pin Connection	*Pins*	Per Pair	*Pins with Horizontal Level*	Each
1/2″ to 1 7/16″	Press-Fit	**2298A13**	$82.75	**2745A24**	$102.10

Pipe Flange Aligner with Protractor

Use as a level—or attach the included conical nut-and-bolt pins for two-hole flange alignment.

Aligner is made of aluminum and has an adjustable-dial protractor with a bubble level that reads to 90° in 2 1/2° increments. Nut and bolt pins fit any pipe-flange holes spaced from 2″ to 5 1/2″ apart.

2342A11 ..... **Each** $107.46

Centering Heads

Find centerlines, lay out keyways, and establish angles and marks for butt connections. Heads are aluminum with a steel centering rod. They also have an adjustable-dial protractor with a bubble level that reads to 90° in 2½° increments.

Manual Punch—To mark a spot, gently strike the centering rod with a hammer.

Spring-Loaded Punch—No need for a hammer. Just press the trigger to release the spring-loaded centering rod.

Manual

	For Pipe OD		Each
Manual Punch	½″-Up	2195A1	$76.47
Spring-Loaded Punch	1″-Up	2195A2	119.14
Replacement Dial/Level Assembly		2195A11	31.43

Pipe Contour Layout Markers

Lay out pipe and structural steel joints with ease. Markers handle any type or size of joint—elbows, tees, and laterals at all angles. They have a lightweight anodized-aluminum frame with a magnetic base, calibrated protractor dials, a triple-jointed marking arm, a holder for the included soapstone crayon, and a built-in bubble level in the base.

Also include a structural adapter that simplifies layout of I-beams, angles, and channels. Protractor reads to 90° in 2½° increments. Hold markers by hand or use any type of elastic cord or strap on nonmagnetic surfaces.

For Pipe OD		Each
1½″ to 18″	7981A1	$159.92
8″ to 48″	7981A3	325.32

Pipe Measuring Tape

Take the guesswork out of sizing pipe. Just wrap this fiberglass tape rule around pipes and fittings to find the size. It measures PVC, galvanized, and iron pipe sizes ⅛″ to 12″, as well as CPVC and copper pipe sizes ¼″ to 12″. Tape locks in place; push button to retract.

2219A21 ..... **Each** $10.91

Pipe-Sizing Tools with Ruler

Measure ⅛″ to 16″ pipe size (1/16″ to 16″ pipe OD) with these pocket-size tools that also unfold into a 14″ ruler. Plus, they have a pipe size/pipe OD conversion chart and a fractional/decimal conversion chart. Size is 7⅝″ Lg.×3½″ Wd. (when folded).

Styrene—A good economical choice; it's white with black markings.

Polycarbonate (Lexan)—Provides high impact resistance and is clear with black markings.

Aluminum—Tool is strong, durable, and glare resistant. It has a black anodized finish with white markings.

Styrene

	Thickness		Each
Styrene	0.04″	1902A8	$8.15
Polycarbonate (Lexan)	0.06″	1902A1	18.10
Aluminum	0.06″	1902A4	34.92

Pipe Wrap Layout Rules

Measure pipe OD and mark straight lines around pipe. Rules are graduated in inches to 16ths and in centimeters. They have a conversion chart with pipe OD and ¼-, ½-, and ¾-circumference measurements. Made of a nitrile-bound material with reinforcing fibers, rules withstand heat up to 360°F and resist grease, oil, gasoline, and salt water. They're gray with white markings.

For Pipe OD	Rule Lg.	O'all Size, Lg.×Wd.×Thick.		Each
1″ to 6″	28″	30″×2⅝″×0.031″	8991A71	$11.50
2″ to 16″	36″	60″×3⅞″×0.031″	8991A73	17.23
6″ to 30″	36″	120″×5¼″×0.031″	8991A75	34.19

Pipe Contour Gauges

Push Down

Slide Up and Mark

Transferring the exact outline of a pipe joint couldn't be easier. Simply slide the gauge over the pipe to be cut, hold pipe in joint position, and push the gauge probes down until they take the shape of the pipe joint. Slide the gauge up and you're ready to mark the pipe. Probes are stainless steel, the inner band is aluminum, and the outer band is yellow ABS plastic.

For Pipe Size	For Pipe OD		Each
1″	1 5/16″	7317A71	$46.31
1¼″	1⅝″	7317A72	52.77
1½″	1⅞″	7317A73	60.31
2″	2⅜″	7317A74	61.38
2½″	2⅞″	7317A75	118.46

Contour Gauges

A series of narrow probes slide within these gauges to duplicate any shape. Excellent for pattern and mold making, imaging parts, and transferring prototype contours. Gauges are also great for fitting floor tiles, linoleum, and carpet against door casings and pipe.

Stainless Steel

Probe Material	O'all Lg.	For Duplicating Contours		Each
Stainless Steel	6″	5¼″ Wd. ×2″ Ht.	2181A12	$7.92
Orange Plastic	11⅛″	10″ Wd. ×1¼″ Ht.	19065A32	19.79

Precision Radius Gauge Sets

Holder with Gauge

Find precise convex and concave radii of tools, patterns, and dies. Each gauge is marked with radius and has five different gauging surfaces for checking all types of radii. Include a vinyl case.

Mitutoyo are Type 304 stainless steel.
Starrett are Type 430 stainless steel.
Pro-Value 2204A41 is Type 301 stainless steel and 2204A55 is Type 304 stainless steel.

No. of Gauges	Radii		Each
Mitutoyo Precision Gauge Sets			
8	9/16″ to 1″ (1/16″ increments)	2204A36	$362.39
26	0.010″ to 0.030″ (0.005″ increments); 0.04″ to 0.10″ (0.01″ increments); 0.12″ to 0.30″ (0.02″ increments); 0.35″ to 0.50″ (0.05″ increments)	2204A65	143.99
Starrett Precision Gauge Sets			
8	9/32″ to ½″ (1/32″ increments)	2204A2	66.00

Optional 4″ Lg. Steel Gauge Holder		2204A6	20.00

♦ Comes with a gauge holder.

Fold-Out Radius Gauge Sets

Sets have male and female steel gauges that fold into a compact case for go-anywhere convenience. Each blade is marked with radius and locks into position with a thumbscrew. Gauges check both convex and concave radii of tools, patterns, and dies. Folded size of 8625A58 is 2¾″ Lg.×½″ Wd.; 8625A68 is 3½″ Lg.×¾″ Wd.; 8625A78 is 2¾″ Lg.×⅝″ Wd.

No. of Gauges	Radii		Each
30	1/32″ to 1/4″ (1/64″ increments)	8625A58	$13.01
32	17/64″ to 1/2″ (1/64″ increments)	8625A68	13.91
34	1 to 3 mm (0.25 mm increments); 3 to 7 mm (0.5 mm increments)	8625A78	33.32

Gear Tooth Pitch Gauges

Each blade is marked with pitch value.

14½° Pressure Angle—Use for most types of gears, including spur. Not for use on miter, bevel, and helical configurations.

14½° and 20° Pressure Angle—Can be used for most types of gears, including spur, miter, bevel, and helical configurations.

Style	No. of Pitches	Pitch Range		Each
14½° Pressure Angle—*Steel*				
Inch	22	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 36, 40, 48, 64, 80	2069A67	$51.95
Metric	16	0.5, 0.75, 1.0, 1.25, 1.5, 1.75, 2.0, 2.5, 2.75, 3.0, 3.25, 3.5, 3.75, 4.0, 4.5, 5.0	2069A68	53.20
14½° and 20° Pressure Angles—*Stainless Steel*				
Inch	22	3, 4, 5, 6, 8, 10, 12, 16, 20, 24, 32	2069A12	167.71
Metric	26	1.0, 1.5, 2.0, 2.5, 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0	2069A13	188.50

Thread Pitch Diameter Wire Set

Measure the pitch diameter of all 60° V, American (NPT), and unified (UN/UNF) threads from 3 to 48 threads per inch and 60° V metric threads from 0.5 mm to 6 mm. Set includes three wires for each of the 16 different pitch diameters and a laminated conversion chart. Simply select the wire size that best fits in the threads; then calculate the pitch diameter with the equations provided. Wires are stainless steel and 3″ long. Set comes in a vinyl pouch.

2082A1 ..... **Each** $29.95

Starrett No. 22C Drill Point Gauge

Get precise verification of 118° drill point angles and determine cutting edge length on right- and left-hand drills. Gauge slides along a 6″ Lg.×¾″ Wd. hook rule; rule is graduated in inches to 64ths. Gauge is steel and locks in place with a thumb nut. Overall length is 6¼″.

8609A51 ..... **Each** $54.00

Tap and Drill Size Gauges

Gauges have tap and drill sizes, and their decimal equivalents, stamped on them to easily determine the right size. They're heavy-gauge steel and are machined and ground.

Fractional gauge sizes are in 1/64″ increments.

Metric gauge sizes are in 0.5 mm increments.

Gauge Style	Wd.×Ht.		Each
Fractional 1/16″-1/2″	2½″×6 7/16″	8986A67	$11.46
Wire 1-60	2½″×6 7/16″	8986A68	11.46
Wire 61-80	1″ ×3″	8986A66	13.41
Letter A-Z	2½″×6 7/16″	8986A65	11.46
Metric 1.5-12.5 mm	2½″×6 7/16″	8986A64	19.23

Screw Pitch Gauge Sets

2071A1

2071A24

Quickly determine the pitch of internal and external screw threads. Gauges have the number of threads per inch (pitch) clearly marked on each blade. Tighten thumbscrew to hold individual blades in place. All are steel, except 2071A69 and 2071A4 which are stainless steel.

No. of Blades	Pitch Range		Each
For 60° V, Unified, American National Threads			
22	9-40	2071A1	$15.72
30	4-42	2071A25	13.90
30	6-60	2071A3	17.22
51	4-84	2071A24	26.25
For 60° V, Unified, American National, and Metric Threads			
28	4-56/0.5-6 mm	2071A26	16.04
51	4-42/0.4-7 mm	2071A68	32.50
For 55° Whitworth Threads			
28	4-60	2071A4	36.90
28	1/16″-2½″	2071A19	10.26
For 60° Metric Threads			
20	0.4-7 mm	2071A18	9.54
28	0.25-2.5 mm	2071A67	16.04
Starrett Set For 60° Metric Threads			
28	0.25-2.5 mm	2071A65	39.01
For 29° Acme Threads			
16	1-12	2071A69	81.27

Acme Screw Thread Gauge

Use gauge to check Acme threads or as a guide while grinding and cutting Acme threads to a 29° included angle. It works on both round and cut threads and has a pitch range of 1-10. Made of steel. Overall size is 3⅜″ Wd.×1⅝″ Ht.

8615A69 ..... **Each** $16.49

NPT, British, and Metric Thread Measuring Set

Identify the pitch of American (NPT), unified (UN/UNF), British (BSPT/BSPP), and metric threads. Set includes two steel gauges, two steel angle gauges, a steel caliper, and an instruction book. Comes in a folding plastic case.

7863K1 ..... **Each** $42.44

Tap and Drill Reference Rule

One side of this stainless steel rule lists tap and drill sizes for UNF, UNC, metric ISO, and American standard pipe threads; the other side has a decimal equivalent table for sizes 1/64″ to 63/64″ and an easy-to-read 6″ rule graduated in inches to 64ths. Overall size is 7″ Lg.×1¼″ Wd.

2119A21 ..... **Each** $6.15

Starrett No. C391 Center Gauge

Set grinding and cutting tools before machine thread cutting. Plus, this American National and U.S. Standard 60° gauge determines threads per inch. Scale is graduated in 14ths, 20ths, 24ths, and 32nds. An additional table gives double depths of threads, so you can determine the size of tap drills. Gauge is spring-tempered steel with a satin chrome finish. Edges and angles are hardened and ground. Overall size is 2¼″ Lg.×¾″ Wd.

2072A11 ..... **Each** $21.50

Screw Checkers

Get complete screw information at your fingertips—diameter, length, threads per inch, hole size, and tap drill size.

***Inch Checkers*—**Check machine screws, bolts, rivets, and most cotter pins. They also measure diameter and length of wood and sheet metal screws. Threaded for NC, NF, and NS threads.

***Metric Checkers*—**Check screws and bolts. Threaded for coarse and fine threads.

Material	For Screw Sizes	Wd. × Ht. × Thick.		Each
Inch Screw Checkers				
Plastic	No. 1 to 5/16″	3″ × 5 1/8″ × 0.125″	98728A111	$10.08
Steel	No. 1 to 5/16″	3″ × 5 1/8″ × 0.08″	98728A112	14.25
Metric Screw Checkers				
Steel	2-7 mm	3″ × 5 3/8″ × 0.07″	98728A114	15.19
Steel	8-14 mm	5 1/8″ × 5 3/8″ × 0.10″	98728A116	16.47

Thread-It Nut and Bolt Gauges

Gauge

Wall-Mount Gauge

Quickly and accurately determine bolt, screw, and nut sizes. Bolts and screws thread into holes; nuts thread onto plugs. All plugs and holes are stamped with the size and come on a cable with a hanging loop except for the wall-mount model, which has labeled plugs and holes mounted on a 3″ Wd. × 39″ Ht. board. Gauges are carbon steel and threaded for both coarse and fine threads. Inch sizes are zinc plated; metric sizes have a black-oxide coating.

***Inch Gauge*—**Sizes: #6, #8-32 (no fine thread), #10, and 1/4″ to 1″ (23 sizes total).

***Metric Gauge*—**Sizes: M3 × 0.5, M4 × 0.7, M5 × 0.8, M6 × 1.0, M7 × 1.0, M8 × 1.0, M8 × 1.25, M10 × 1.0, M10 × 1.25, M10 × 1.5, M12 × 1.25, M12 × 1.5, M12 × 1.75, M14 × 1.5, M14 × 2.0, M16 × 1.5, M16 × 2.0, M20 × 1.5, M20 × 2.5, M24 × 2.0, M24 × 3.0.

***Inch/Metric Gauge*—**Inch sizes: #6, #8, #10, and 1/4″ to 1/2″ (16 sizes total); and metric sizes: M4 × 0.7, M5 × 0.8, M6 × 1.0, M7 × 1.0, M8 × 1.0, M8 × 1.25, M10 × 1.0, M10 × 1.25, M10 × 1.5, M12 × 1.25, M12 × 1.5, and M12 × 1.75.

***Inch/Metric Wall-Mount Gauge*—**Inch sizes: #6, #8, #10, and 1/4″ to 1/2″ (16 sizes total); and metric sizes: M4 × 0.7, M5 × 0.8, M6 × 1.0, M7 × 1.0, M8 × 1.0, M8 × 1.25, M10 × 1.0, M10 × 1.25, M10 × 1.5, M12 × 1.25, M12 × 1.5, and M12 × 1.75. Gauge has two 5/16″ dia. holes for mounting (fasteners not included).

		Each
Inch Gauge	20375A14	$29.33
Metric Gauge	20375A17	29.33
Inch/Metric Gauge	20375A21	30.35
Inch/Metric Wall-Mount Gauge	20375A27	44.10

Wire and Sheet Metal Gauges

Gauges have gauge numbers on one side, decimal equivalents on the other. All are hardened steel and approximately 3 1/4″ dia.

***U.S. Steel Wire Gauge*—**The same as W & M (Washburn & Moen) and American Steel and Wire Co. gauges, it measures steel wire and steel wire rod.

***American Wire Gauge*—**The same as Brown & Sharpe gauges, it measures copper and aluminum wire and sheet.

***U.S. Standard Iron and Steel Plate and Sheet Gauge*—**Designates sizes of iron and steel plates and sheets based on the weight per square foot per inch thickness.

Gauge Type	Gauge Range	Decimal Equivalent		Each
U.S. Steel Wire Gauge	36-0	0.009″-0.3065″	19305A34	$63.01
American Wire Gauge	36-0	0.005″-0.3249″	19305A33	18.97
U.S. Standard Iron and Steel Gauge	36-0	0.007″-0.3125″	8622A53	19.19

Metric Screw Pitch and Bolt Gauge

Measure the outside diameter of threads from 2.3 mm to 24 mm. Gauge is high-impact styrene and includes a removable carbon steel screw pitch gauge for measuring metric thread pitches from 0.35 mm to 3 mm. Overall size is 9 1/2″ Wd. × 4″ Ht.

8567A11 ..... **Each** $11.79

Bolt and Nut Gauges

Inch Gauge

Metric Gauge

Gauges are high-impact polystyrene.

***Inch Gauge*—**Measures #8 to 3/4″ bolt sizes and #8 to 5/8″ nut sizes.

***Inch/Metric Gauge*—**Measures #6 to 1″ and M6 to M22 bolt sizes; #8 to 5/8″ nut sizes.

***Metric Gauge*—**Measures M6 to M16 bolt sizes, M10 to M24 nut sizes, plus 1.00 to 2.00 thread pitch.

	Wd. × Ht.		Each
Inch Gauge	7 1/2″ × 2 3/8″	98845A650	$3.71
Inch/Metric Gauge	9″ × 3 3/4″	98845A670	5.14
Metric Gauge	5 1/4″ × 3 3/16″	98845A660	3.71

All-in-One Gauges

Standard Gauge

Stop limiting yourself. Get one gauge to measure screw, bolt, nut, and nail sizes; steel, brass, and PVC pipe size by OD; copper and CPVC tubing size by OD; drill, rod, tube, and wire size by OD; copper and CPVC joint tube fittings by ID; and internally threaded pipe fittings by ID. Plus, they have rules graduated in inches and cm, an electrical wire gauge, and conversion formulas for converting measurements to other scales. Gauges are PVC.

Deluxe gauge measures more sizes than the standard gauge.

	Wd. × Ht.		Each
Standard Gauge	8 11/16″ × 4 1/4″	20165A33	$2.43
Deluxe Gauge	10 1/2″ × 3 1/2″	20165A34	4.93

Pipe and Tubing Gauges

Pipe, Tubing, Fitting, and Hose Gauge

Hose and Fitting Gauge

***Pipe, Tubing, Fitting, and Hose Gauge*—**Measures pipe thread sizes to 3/4″; tubing OD and hose ID up to 1″. Also has a pipe and compression fitting chart. Made of high-impact polystyrene. Overall size is 9″ Wd. × 3 3/4″ Ht.

***Stainless Steel Hose and Fitting Gauge*—**Corrosion-resistant gauge measures hose ID up to 1 1/4″ as well as male and female NPT threads to 2″. Overall size is 3 3/4″ Wd. × 4 1/2″ Ht.

		Each
Pipe, Tubing, Fitting, and Hose Gauge	1976A22	$4.50
Stainless Steel Hose and Fitting Gauge	20195A34	15.91

Pipe Thread and Taper Checker

Make sure you have the right pipe thread and taper. Use checker on 1/16″, 1/8″, 1/4″, 3/8″, and 1/2″ pipe with NPT threads. Frame is anodized aluminum; overall size is 2″ Wd. × 3″ Ht. × 1/4″ Thick.

1980A1 ..... **Each** $17.27

Mitutoyo Electronic Calipers

An LCD gives you a clear view of your measurements. Calipers take inside, outside, and depth measurements in 0.0005″ and 0.01 mm increments. They are made of stainless steel and have zero-position memory, also known as absolute (ABS) positioning. Batteries (where required) are included. A case is also included, except for economy calipers.

Standard Calipers with Pointed Jaws and SPC Data Output— Measure small holes and grooves.

Large-Capacity Calipers— A deep jaw makes measuring large and hard-to-reach material easier, and a carbon fiber beam makes these lighter to use than other large-capacity calipers. Minimum inside measuring length is ½″ for 24″ caliper and 1″ for 40″ and 60″ calipers.

Harsh Environment Calipers— IP67 rated for dust and temporary water submersion.

Accessories— *Depth base attachments* secure the caliper on a base for easier depth measurements. *Display freeze adapter* keeps a measurement displayed even if the jaw is repositioned. *SPC data output cables* connect calipers with SPC data output to a Mitutoyo miniprocessor (sold separately on page 2269) or to your PC also using an input tool (sold separately on page 2270).

Certificates of calibration are traceable to NIST.

Starrett Electronic Calipers

Your precision measurements stand out on the LCD. Calipers take inside, outside, and depth measurements in 0.0005″ and 0.01 mm increments. All are stainless steel and have zero-position memory, also known as absolute (ABS) positioning. A case and batteries are included.

Standard Calipers— 21335A124 only takes inside and outside measurements and does not have top jaws. Instead, it has notches on the bottom jaws to take inside measurements.

Harsh Environment Calipers— IP67 rated for dust and temporary water submersion. They have SPC data output and can be connected to a PC using an SPC data output cable (sold separately below) and interface adapter 23175A81 (sold separately on page 2278).

Depth base attachment secures caliper on a base for easier depth measurements. ***Certificates of calibration*** are traceable to NIST.

Caliper Tip Assortment

Attach these tips to your 4″, 6″, or 8″ electronic, dial, or vernier caliper for the added versatility of measuring slots, inside pockets, shoulders, and holes. All are made of steel. Assortment contains two tip bodies, four pairs of tips (flat, conical, stem, and ball end), set screws, hex key wrench, instructions, and case.

20095A31 ..... $36.67

Economy Electronic Calipers

Standard

Large Capacity

Take accurate measurements at a fraction of the price of other electronic calipers. Calipers have an LCD and take inside, outside, and depth measurements in 0.0005″ and 0.01 mm increments. All are made of stainless steel. Include a case and two batteries (unless noted).

Fraction Calipers— Also display 1/64″ increments.

Water-Resistant Caliper— IP54 rated for dust and splashing water.

Large-Capacity Calipers— A deep jaw makes measuring large and hard-to-reach materials easier.

✓ Includes a pouch with belt clip. ♠ Only takes inside and outside measurements. ★ Case not included. Comes with one battery.

Caliper Range Extenders

Expand your 6″ electronic, dial, or vernier caliper to measure larger items. Extenders are aluminum and come with a 6″ calibration rod. They have two pins that project ½″ when installed and act as jaws for the extension (longer pins sold separately).

If you need to drill holes in the item you are measuring, use ***centerline gauge pins*** (sold separately) to determine the center-to-center distance between holes. They are 0.620″ dia. and taper to a sharp point. Include an end block, set screw, and instructions.

Length		
26″	85635A11	$169.66

Dial Calipers

Mitutoyo

Starrett

Brown & Sharpe

Economy

A dial lets you check your measurements at a glance. Calipers take inside, outside, depth, and step measurements, unless otherwise stated. All have dials with built-in backlash control to prevent the needle from deviating (unless noted). Inch calipers have a white dial face; metric calipers have a yellow dial face. Made of stainless steel and include a case.

Mitutoyo Calipers—Inch calipers measure in 0.001″ increments; metric in 0.025 mm increments. Accuracy is ±0.001″ for 4″ and 6″, ±0.002″ for 8″ and 12″, and ±0.03 mm for 150 mm and 200 mm.

Starrett Calipers—Inch calipers measure in 0.001″ increments; metric in 0.025 mm increments. Accuracy is ±0.001″ for 6″, ±0.0015″ for 9″ and 12″, and ±0.03 mm for 150 mm. 8586A13 *and A18* require a *depth rod* (sold separately) to take depth measurements.

Brown & Sharpe Calipers—Measure in 0.001″ increments. Accuracy is ±0.001″. *Optional mahogany case* (sold separately) holds a caliper and one depth base attachment.

Economy Calipers—Inch calipers measure in 0.001″ increments. 2289A76 *and A78* also measure in 0.025 mm increments. 2289A46 measures in 0.02 mm increments. *Fraction caliper* measures in 1/64″ and 0.01″ increments and has a blue and white dial face.

Accuracy is ±0.001″ for 4″, 6″ and 8″, ±0.002″ for 12″, and ±0.03 mm for 150 mm.

2289A22 does not take step measurements.

Depth base attachments secure caliper on a base for easier depth measurements. ***Certificates of calibration*** are traceable to NIST.

Plastic Dial Calipers

Lightweight yet durable. Calipers take inside, outside, depth, and step measurements, unless otherwise stated.

Standard caliper measures in 0.001″ increments. Color is gray with a white dial face. ***Metric*** caliper does not take step measurements. It measures in 0.1 mm increments. Color and dial face are white. ***Fraction*** caliper measures in 0.01″ and 1/64″ increments. Color is orange with a yellow and white dial face.

Holster for Dial Calipers

Keep your caliper protected and within reach. Holster is leather and includes a belt loop. Fits 6″ and 150 mm dial calipers.

3278A41 ..... $15.83

Vernier Calipers

Mitutoyo and Economy Locking Jaw

Master and Economy Fine Adjustment

Mitutoyo Easy Slide

Economy

Graduations on the sliding vernier scale coupled with graduations on the main scale allow you to take precise inside, outside, and depth measurements. Calipers are graduated in 0.001″ and 0.02 mm increments. Made of stainless steel, except 2192A21 is steel.

Locking-jaw calipers move only when the thumb lock is depressed.

Easy-slide calipers have a slider knob to move the jaws.

Fine-adjustment calipers have an additional screw for finer adjustments. *Master fine-adjustment caliper* 8619A53 and *economy fine-adjustment calipers* have top and bottom jaws; *master fine-adjustment calipers* 8618A61, *A71, and A75* have bottom jaws only.

♣Graduated in 1/128″ and 0.001″ increments. ●Only takes inside and outside measurements. ★ Graduated in 1/16″ and 0.1 mm increments.

Slide Calipers

Move the jaw along the scale to take inside and outside measurements.

Starrett Caliper— Has a thumb grip to open and close the jaw and a stop to prevent slide detachment. Scale is graduated in 1/32″ and 1/64″ increments on the front and 1/32″ on the back. Made of stainless steel.

Economy Calipers— Made of stainless steel. 2287A17 is graduated in 1/32″ and 1 mm increments; 2287A21 is graduated in 1/32″ increments; 2287A22 is graduated in 1/16″ and 1 mm increments.

Economy Plastic Caliper— Scale is graduated in 1/32″ and 1 mm increments.

Large-Capacity Slide Calipers

Deep jaws are just what you need to measure pipes, poles, logs, and other items with large diameters. They take outside measurements and are made of aluminum.

Inch calipers are graduated in 0.10″ increments; metric caliper is graduated in 1 mm increments.

Outside Range	Jaw Dp.	Accuracy	O'all Lg.		
0-18″	11½″	±0.10″	28″	**19185A21**	$144.00
0-24″	14½″	±0.10″	34″	**19185A26**	170.12

0-50 cm	11½″	±1 mm	28″	**19185A41**	144.00

Caliper Calibration Masters

Check your caliper's inside and outside measurements. Calibration masters work with electronic, dial, and vernier calipers. They are made of steel and come with a certificate of calibration traceable to NIST. A case is included.

Inch master is graduated in 1″ increments; metric master is graduated in 25 mm increments.

Inside Range	Outside Range	Accuracy		
½″-4½″	1″-6″	±0.0002″	**2415A33**	$499.37
12.5-112.5 mm	25-150 mm	±0.005 mm	**2415A36**	499.37

Mitutoyo SPC Miniprocessor

Process data from your Mitutoyo electronic tool with SPC data output—just connect it to this compact unit with a Mitutoyo data output cable (sold separately on page 2270).

Miniprocessor performs the following functions and prints results: Maximum and minimum values; range (R); mean ($\bar{x}$); standard deviations (σn and σn-1); number and percentage defective (±NG, P); process capability index (Cp and Cpk); histograms; displacement charts; and Go/No-Go discrimination via green and red LEDs.

In print mode, the miniprocessor will print up to 100,000 measurements; in statistical calculation mode, it'll perform and print statistical calculations on up to 9,999 measurements. Operates with included AC adapter or on four AA alkaline or rechargeable batteries (sold separately). Comes with a 157-ft. roll of printer paper. Size is 7.9″ Lg.×3.7″ Wd.×2.9″ Ht.

		Each
SPC Miniprocessor (DP-1VR)	**20815A85**	$466.00
Replacement Printer Paper (157-ft. Roll)	**20815A88**	13.94

		Pkg.
AA Alkaline Batteries (Pkg. of 4)	**6959K31**	$5.47
AA Rechargeable Batteries (Pkg. of 2)	**7685K1**	5.31

Mitutoyo Electronic Micrometers

An LCD allows quick and clear measurement readings. Micrometers measure in 0.00005″ and 0.001 mm increments. They have a cast iron frame with carbide spindle and anvil faces. Spindle and anvil are 0.250″ dia. A case and battery are included.

Standard Micrometers— Accuracy is ±0.0001″ and ±0.0025 mm.

Harsh Environment Micrometers— IP65 rated for dust and spraying water. Accuracy is ±0.00005″ and ±0.001 mm. They have zero-position memory, also known as absolute (ABS) positioning. *Micrometers with SPC data output* can be connected to a Mitutoyo miniprocessor using a data output cable (sold separately below) or to your PC using a data output cable and an input tool (sold separately on this page).

Certificates of calibration are traceable to NIST.

Mitutoyo Data Input Tools

With PS/2 Connector

With USB Connector

With RS-232C Connector

Transmit data from your Mitutoyo electronic tool with SPC data output to your PC. A data output cable (sold separately on this page) is required to connect your Mitutoyo measuring tool to the input tool.

Data input tools with PS/2 or ***USB connector*** allow you to import data into spreadsheet programs such as Microsoft Excel.

Data input tool with RS-232C connector lets you import data into SPC software such as MeasurLink. Has a D-subminiature 9-pin female connector for PCs with RS-232C interface.

Data Input Tool with PS/2 Connector	**1825A11**	$127.00
Data Input Tool with USB Connector	**1825A14**	181.00
Data Input Tool with RS-232C Connector	**1825A12**	255.00

Mitutoyo and Starrett Data Output Cables

Starrett Micrometers

Series 436 with Ratchet Thimble

Series 230 with Friction Thimble

Micrometers have a steel frame with carbide spindle and anvil faces. A case is included, except for 21075A263.

Series 436 Micrometers— Spindle and anvil are 0.250″ dia. **Also Available:** Starrett No. T436XRL micrometers with ranges up to 12″. Frame is cast iron. Spindle and anvil are 0.300″ dia. They do not include case. To order, please ask for 2044A8 and specify range: 6-7″, 7-8″, 8-9″, 9-10″, 10-11″, or 11-12″.

Series 232 and 230 Micrometers— Spindle and anvil are 0.235″ dia., except 21075A263, which is 0.200″ dia. All 1″ micrometers also have decimal equivalents on the frame.

Micrometer Sets— Include Series 436 micrometers with ratchet thimble and a case.

Certificates of calibration are traceable to NIST.

Holster for Micrometers

Keep your micrometer protected and close at hand. Holster is leather and has a belt loop. Fits 1″ and 25 mm micrometers.

21145A21 ..... $14.31

Micrometer Stand

Put your micrometer in a stand to make inspection easier. Position and angle are adjustable. Clamp holds a micrometer up to ¾″ thick and has a rubber face to prevent marring. Made of cast iron with a rubber bottom to prevent movement.

2312A16 ..... $23.86

Brown & Sharpe Micrometers

Two thimble styles in one tool—reversible thimble sleeves let you convert these micrometers from plain thimble to friction thimble. Frame is chrome and has decimal equivalents. Spindle and anvil have carbide faces and are 0.250″ dia.

2053A1 also has slanted graduations that remain visible through a complete revolution of the thimble.

Starrett Calibration Rods

Also known as calibration standards, these rods let you check and set the calibration of micrometers and other measuring tools. They include insulated plastic handles to minimize heat expansion. All are Starrett Series 234.

Also Available: Calibration rods with a certificate of calibration traceable to NIST. Please ask for 8570A26 and specify length.

Mitutoyo Micrometers

Series 101

Series 103 with Friction Thimble

Quickly get easy-to-read measurements. Spindle and anvil have carbide faces and are 0.250″ dia. A case is included.

Series 101 micrometers have a steel frame. ***Series 103 micrometers*** have a cast iron frame. Certificate of calibration is traceable to NIST.

Micrometer Sets— Contain Series 103 micrometers with ratchet thimble, except 0-1″ and 1″-2″ in 85205A71 and 1″-2″ in 85205A72 have a friction thimble. A case is included.

Precision Measuring Tool Sets

Electronic Tool Sets

Mitutoyo Tool Set

Sets include a caliper, a micrometer, batteries, and a case. All have zero-position memory, also known as absolute (ABS) positioning.

Caliper takes inside, outside, and depth measurements. Range is 0-6″ and 0-150 mm. Measures in 0.0005″ and 0.01 mm increments.

Micrometer has a range of 0-1″ and 0-25 mm. Measures in 0.00005″ and 0.001 mm increments.

Nonelectronic Tool Sets

Starrett Tool Set

Sets include a dial caliper, a micrometer, a 6″ long rule, and a case.

Dial caliper takes inside, outside, and depth measurements. Range is 0-6″. Dial is graduated in 0.001″ increments.

Micrometer has a range of 0-1″. It has a friction thimble graduated in 0.0001″ increments, except Starrett has a ratchet thimble.

Tips for Micrometers

Turn your micrometer into a specialty micrometer capable of measuring slots, grooves, holes, angles, cylindrical walls, and other surfaces. Each tip comes with a 0.28″ long rubber holding device that fits 0.235″ and 0.250″ spindle and anvil diameters.

2313A11 also fits 0.270″ spindle and anvil diameter; 2313A12 also fits 0.270″ and 6 to 7 mm spindle and anvil diameter. Both include two balls.

		Tip Size (X)	Lg.		
A	Ball (Inch)	0.200″ Dia.	0.20″	**2313A11**	$4.08
A	Ball (Metric)	5 mm Dia.	0.20″	**2313A12**	5.50
B	Knife	30°	0.50″	**2313A13**	15.00
C	Blade	0.030″ Thick	0.50″	**2313A17**	15.00
D	Spline	0.050″ Dia.	0.50″	**2313A14**	15.00
E	Spline	0.100″ Dia.	0.50″	**2313A18**	15.00

G	Cone	30°	0.50″	**2313A16**	15.00

8-Piece Tip Kit— Includes the following tips listed above and a case: two of 2313A11 and one each of 2313A13, A17, A14, A18, A15, and A16.

2313A21 ..... $49.14

Mitutoyo Long-Reach Micrometers

Electronic

Nonelectronic

An extra-deep throat gives you a longer reach for measuring sheet metal and other large items. Micrometers have a ratchet thimble and cast iron frame with carbide spindle and anvil faces. All include a case.

All micrometers have a 0.25″ dia. spindle and anvil.

Electronic Micrometers— Have an easy-to-read LCD and zero-position memory, also known as absolute (ABS) positioning. Battery is included.

They also have SPC data output so you can connect them to a Mitutoyo miniprocessor (sold separately on page 2269) using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2270).

Harsh environment micrometer is IP65 rated for dust and direct water splash.

Mitutoyo and Starrett Wide-Range Micrometers

Change out the anvil to increase the micrometer's range. All micrometers have a ratchet thimble and a cast iron frame. A case, measuring rod, and wrench are included.

Mitutoyo Electronic Harsh Environment Micrometers— Have an LCD and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so you can connect them to a Mitutoyo miniprocessor (sold separately on page 2269) using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2270). Spindle and anvil have carbide faces and are 0.250″ dia. A battery is included. All are IP65 rated to protect from dust and direct water splash.

0-6″ micrometer measures in 0.00005″ and 0.001 mm increments; *6″-12″* micrometer in 0.0001″ and 0.003 mm increments.

Starrett Nonelectronic Micrometers— Graduated in 0.001″ and 0.03 mm increments. Spindle and anvil have steel faces and are 0.300″ dia.

Micrometer Check Gauge

Check for out-of-parallel anvils and determine other wear on your 1″ micrometer. Gauge is steel and has nine steps that measure from 0.140″ to 0.964″. Sizes correspond to a 45° turn of a micrometer's lead screw. Each step is accurate to ±0.0001″. Overall length is 2 13/16″. A case and certificate of calibration traceable to NIST are included.

8564A12 ..... $317.45

Mitutoyo and Starrett Micrometer Heads

A

B

C

D

Use these micrometer heads with special equipment, such as jigs/fixtures, machine tools, and equipment with movable tables, where precise movement and adjustments are required. Heads are held in place by the cylindrical mounting hub using your existing brackets or fixtures. Spindle length listed is the maximum extended distance when micrometer is set at zero. *Nonrotating* spindles are ideal for delicate and high-accuracy applications.

Electronic Micrometer Heads— Have an LCD and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so they can be connected to a Mitutoyo miniprocessor (sold separately on page 2253) using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2270). They display in 0.00005″ and 0.001 mm increments. Spindle face is carbide. Battery is included.

8283A22 and *A23* have a mounting-hub hold-down nut for extra support.

Nonelectronic Micrometer Heads— Have a steel spindle face.

Style C inch heads are graduated in 0.001″ increments. Metric heads are graduated in 0.01 mm.

Style D have a mechanical digital counter that displays in 0.001″ increments. Thimble is graduated in 0.001″ increments.

Mitutoyo Electronic Thickness Gauges

A

B ***Flat Anvil Face***

B ***Ball Anvil Face***

C

An LCD gives you instant readings. Gauges measure in 0.0005″ and 0.01 mm increments, except for 20955A16, which measures in increments selectable between 0.00005″, 0.0001″, 0.0005″, 0.001 mm, and 0.01 mm. They have zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so you can connect them to a Mitutoyo miniprocessor (sold separately on page 2269) using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2270). A battery is included.

Flat anvil faces measure paper and other flat stock. Spindle and anvil faces are ceramic, except for 20955A16, which has carbide faces.

Ball anvil face measures wall thickness of pipes, tubes, and other cylindrical shapes. Spindle and anvil faces are steel.

Certificates of calibration are traceable to NIST.

Dial Thickness Gauges

Mitutoyo Loop Handle

Starrett Pocket

Economy

Glance at the dial to check thickness measurements. A case is included. *Inch* dial faces are white; *metric* dial faces are yellow.

Mitutoyo loop-handle gauges have a comfortable hand grip with a thumb lever that raises the spindle.

Starrett pocket gauges fit between your thumb and index finger. Pull the serrated finger slide to raise the spindle.

Economy gauge operates with a serrated finger slide that raises the spindle.

Certificates of calibration are traceable to NIST.

Starrett Inside Hole Micrometers

Series 823

Series 124

Find the inside diameter of cylinders and rings, as well as the distance between two surfaces. Micrometers measure in 0.001″ increments. Accuracy is ±0.0001″. They have a plain thimble and steel measuring faces. A case is included.

Series 823— Have lightweight 3/8″ dia. tubular steel extensions that attach at each end of the micrometer head.

2049A1, 2049A2, and 2049A6 include a 5 1/2″ long handle.

Series 124— Have solid steel extensions with individual length adjustment.

2048A1 and 2048A2 extensions are 1/4″ dia.; 2048A3 extensions are 11/32″ dia.; and 2048A4 extensions are 1/4″ dia. and 11/32″ dia.

Inside Hole Dial Calipers

With short, narrow contacts, these calipers have no problem measuring shallow recesses. Push the button to close the arms and release to obtain the diameter. Inch calipers measure in 0.001″ increments; metric in 0.025 mm increments. Bezel rotates to set zero anywhere on the dial and has a lock screw. Dial face is white. Arms are 3 1/4″ long and have carbide measuring points.

Telescoping Hole Gauges

Spring tension forces two telescoping steel contacts to expand inside the hole and a screw in the handle locks the contacts. To determine hole size, measure the distance across the locked contacts with a micrometer (not included).

Sets include a pouch.

Starrett gauges are steel.

Economy gauge sets are chrome-plated brass and steel.

Brown & Sharpe Intrimik Hole Gauges

Read measurements directly from these gauges without the need for a micrometer. Three evenly spaced steel contacts ensure proper centering. Gauges have a ratchet thimble and measure in 0.0002″ increments. Also known as bore gauges.

★ Measures in 0.0001″ increments.

Hole Gauges

Use the interchangeable anvils to measure the inside diameter of holes and cylindrical bores, as well as identify out-of-roundness problems. Also known as bore gauges.

Dial Gauges— Have a 2 1/4″ dia. (AGD Group 2) dial indicator with white face. A case is included.

Mitutoyo dial gauges measure in 0.0001″ increments and have a jeweled bearing to prevent excessive wear. Anvils have carbide steel points, except 20685A663, which has alloy steel.

Mitutoyo 3-piece dial gauge set includes 20685A664, A665, and A666.

Economy dial gauges measure in 0.0005″ increments. Anvils are carbide steel; probes have carbide steel points.

Economy Electronic Gauge— Has an LCD to make reading measurements easier, and zero-position memory, also known as absolute (ABS) positioning. Measures in 0.00005″ increments. A battery is included.

Small-Hole Gauges

Full Ball

Insert into small holes, slots, grooves, and recesses and turn the knob on the handle to expand the contacts. To get your reading, measure the distance across the contacts with a micrometer (not included).

Full-ball gauges are great for deep through holes. ***Half-ball gauges*** are best for flat, shallow areas.

Starrett Gauges— Full-ball gauges are Series 829; half-ball gauges are Series 831.

Starrett 4-piece gauge set includes one gauge in each range listed and a pouch. **To Order:** Please specify full-ball or half-ball for all Starrett gauges.

Economy 4-Piece Gauge Set— Includes a full-ball gauge in each of the following ranges: 0.125″-0.200″, 0.200″-0.300″, 0.300″-0.400″, and 0.400″-0.500″. Comes in a pouch.

Mitutoyo Depth Gauges

Dial Gauge

Electronic Gauge

A curve on the tip of the measuring blade lets you access narrow spaces. Base is 4″ long. A pouch is included.

Dial Gauges— Measuring blade is 0.43″ wide (0.16″ at the tip). Inch gauges measure in 0.001″ increments; metric in 0.05 mm increments. All have a white dial face and a fine-adjustment screw.

Electronic Gauges— Measuring blade is 0.63″ wide (0.20″ wide at the tip). Gauges have an LCD and measure in 0.0005″ and 0.01 mm increments. They also have zero-position memory, also known as absolute (ABS) positioning, and SPC data output so they can be connected to a Mitutoyo miniprocessor using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2270). Battery is included.

Electronic harsh environment gauge is IP67 rated for dust and temporary water submersion.

Optional base extensions increase the base length to measure larger diameter holes.

Dial Depth Gauges

Measure depths up to 22″ using the included connectable rod extensions. Extensions are 1″, 2″, 3″, 4″, 5″ and 6″ long with a 0.2″ dia. Without extensions, gauge has 0-1″ range and measures in 0.001″ increments. Range per dial revolution is 0.100″ and accuracy is ±0.001″. Includes three interchangeable contact points with 4-48 threads—one 0.118″ dia. carbide ball, one 1″ Lg.×0.078″ dia. point, and one 1″ long needle point. Dial face is white. Base is 4″ long. A case and a clamping screw to lock settings are included.

8645A11 ..... $166.56

Electronic Depth Micrometers

Mitutoyo

Micrometers have an LCD, interchangeable steel rods in 1″ incremental lengths for measuring a variety of depths, and a ratchet thimble. A battery and case are included.

Mitutoyo Micrometers— Accuracy is ±0.00012″. Micrometers have zero-position memory, also known as absolute (ABS) positioning, and SPC data output that allows them to be connected to a Mitutoyo miniprocessor using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (see page 2270).

20635A33 measures in 0.00005″ and 0.001 mm increments; 20635A63 in 0.0001″ and 0.001 mm increments.

Economy Harsh Environment Micrometer— IP54 rated for dust and splashing water. Micrometer measures in 0.00005″ and 0.001 mm increments. Accuracy is ±0.0001″.

Mitutoyo and Starrett Depth Micrometers

Starrett

Change out the steel rods supplied in 1″ incremental lengths to measure depth of holes, slots, shoulders, and projections. Micrometers have a ratchet thimble. *Inch* micrometers measure in 0.001″ increments; *metric* micrometers measure in 0.01 mm increments. A case is included.

Mitutoyo Micrometers— Accuracy is ±0.00012″.

Starrett Micrometers— Accuracy is ±0.0001″ for inch micrometers and ±0.002 mm for metric.

Certificates of calibration are traceable to NIST.

Mitutoyo Electronic Indicators

Indicators have an LCD, ability to count forward or backward from zero, and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so they can be connected to a Mitutoyo miniprocessor using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2270). Mounting stem is 3/8″ dia. and contact point has 4-48 threads. A battery is included where required.

(B&C) Easy-read indicators have a larger display than the other indicators and a rotating dial face. You can set any starting value, and they have go/no-go operation for tolerance checking.

(D) Compact indicator has a slim design for use in tight spaces.

(E) Backlit quick-read indicators' LCD changes from green to red so you can quickly identify out of tolerance. Indicators perform TIR (total indicating runout), which determines range of high and low spots of round parts. You can set any starting value. They have an analog bar display with adjustable range and tolerance indicators and a function lock. Operate on 120 VAC and have a 6½-ft. long power cord with a two-prong plug.

(F) Harsh environment indicators are IP53 rated for dust and water droplets.

Certificates of calibration are traceable to NIST.

Economy Electronic Indicators

An economical alternative to our other electronic indicators. They have an LCD, a 3/8″ dia. mounting stem, a 1/4″ lug back, and a contact point with 4-48 threads. A control button provides go/no-go tolerance checking. Battery is included. ***Fraction*** indicator also measures in 1/64″ increments.

Depth-Gauge Bases for Indicators

Convert electronic and dial indicators into depth gauges. All are made of steel.

Economy bases come with a set screw to hold a 3/8″ dia. indicator mounting stem. Size is 5/8″ Wd. × 3/4″ Ht.

Standard bases come with one holding collet that accepts a 3/8″ dia. indicator mounting stem. Additional mounting holes add adaptability. Size is 3/4″ Wd. × 5/8″ Ht.

Starrett Electronic Indicators

Economy Basic

Advanced Wisdom Plus

Indicators have an LCD and the ability to count forward or backward from zero. They have a 3/8″ dia. mounting stem, a 1/4″ lug back, and a contact point with 4-48 threads. A battery is included.

Economy indicators are AGD Group 2.

Basic indicators have a rotating dial (AGD Group 2) for reading in any position. 20695A47 also has SPC data output so it can be connected to a Starrett data collector using an SPC data output cable, or to your PC using an SPC data output cable and an interface adapter (both sold separately below).

Advanced indicators have a rotating dial (AGD Group 2) for reading in any position, go/no-go tolerance checking, and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so they can be connected to a Starrett data collector using an SPC data output cable, or to your PC using an SPC data output cable and an interface adapter (both sold separately below).

Wisdom Plus indicators are AGD Group 3 and have everything the advanced indicators have plus display freeze, capability to set any starting value, function lock, and selectable display increments (increment listed in the table is the most accurate). They also have SPC data output so they can be connected to a Starrett data collector or to your PC using an SPC data output cable assembly (sold separately below).

Dial Indicators with Magnetic Base

Place on any flat steel surface—a magnetic base provides a solid mount. A case is included.

Indicators have a 0-1″ range, plain bearings, a 3/8″ dia. mounting stem, a 1/4″ lug back, and contact point with 4-48 threads. They also have a 2 1/4″ dia. (AGD Group 2) rotating continuous dial with a white face that reads 0-100 in both directions. Dial measures in 0.001″ increments. Accuracy is ±0.002″.

Base has a 45-lb. magnetic pull and is 2″ Lg.×1 3/8″ Wd.×1 7/8″ Ht. The upright post is steel and 5/16″ Dia.×4″ Ht. Indicator holding rod is 4 1/2″ long. A swivel clamp and indicator holding clamp are included.

2316A11 ..... $93.94

Precision Dial Indicator Stands

Get precise measurements and the convenience of a stand. Stands have a black granite base with a steel upright post.

Economy stands have an indicator holding arm. 86285A51 and 86285A54 have a 1/4″ lug-back mount; 86285A55 and 86285A56 accept a 3/8″ dia. mounting stem.

Standard stands provide stability for close tolerance inspection as well as nearly frictionless workpiece movement. All include a certificate of accuracy traceable to NIST. 8628A44 has a rigid indicator holding arm. 8628A45 and 8628A46 have a fine-adjustment knob on the indicator holding arm. 8628A46 also includes a case.

To Order: Please specify 1/4″ lug-back mount or flat-back mount.

Dial Indicators with Precision Stand

A high-quality granite base provides stability for close tolerance inspection as well as nearly frictionless workpiece movement.

Indicators have a 0-1″ range, jeweled bearings, a 3/8″ dia. mounting stem, and a contact point with 4-48 threads. They also have a 2 1/4″ (AGD Group 2) rotating continuous dial with a white face that reads 0-100 in a clockwise direction. Dial measures in 0.001″ increments. Accuracy is ±0.001″. Include a certificate of calibration traceable to NIST.

Bases have a steel upright post. 8628A41 has a rigid indicator holding arm; 8628A42 has a fine-adjustment knob on the indicator holding arm.

To Order: Please specify indicator back style: 1/4″ lug back or flat back.

Base Lg.	Base Wd.	Base Ht.	Upright Post Dia.	Upright Post Ht.	Throat Dp. from Post	Surface Accuracy		
6″	6″	2″	1 1/4″	8″	1 3/4″	±0.00005″	8628A41	$256.56
8″	12″	2″	1 1/4″	12″	5″	±0.0001″	8628A42	415.59

Dial Indicator Stands

Stand with One Anvil

Use with your AGD electronic or dial indicator (not included) to take accurate comparative measurements. Stands fit 3/8″ or 8 mm dia. mounting stem. Base is made of cast iron and is 5 3/4″ Lg.×3 1/2″ Wd.×1 1/2″ Ht. Upright post and anvils are steel. The indicator holding arm has a fine-adjustment knob.

Stand with one anvil includes an anvil with a serrated face.

Stand with two anvils includes one anvil with a serrated face and one with a flat face.

	Upright Post Dia.	Upright Post Ht.	Throat Dp. from Post	Anvil Face Dia.		
With One Anvil	1″	8″	2 1/2″	2″	7386A12	$195.19
With Two Anvils	1″	14″	2 3/4″	2 3/8″	7386A14	211.23

Electronic Test Indicators

An LCD provides instant, easy-to-read measurements. Indicators have a dovetail mount, measure in selectable increments of 0.00005″, 0.0005″, 0.001 mm, and 0.01 mm, and display both digits and a bar graph. Dial face is 1 1/2″ dia. and rotates 360°. Contact point is 0.080″ dia. and swivels 270°. Operate on one 3-volt battery (included). IP65 rated for dust and spraying water.

Replacement Battery							21105A186	1.92

Dial Indicators

Indicators have jeweled bearings, a rotating dial face, a 1/4″ lug back, and a contact point with 4-48 threads, except 2434A11 has 0-80 threads and all economy have M2.5×0.45 threads. Mounting stem is 3/8″ dia. except 2434A11, which is 7/32″ dia. Inch dial faces are white; metric dial faces are yellow.

Continuous dials are numbered in a clockwise direction for direct measurements. ***Balanced dials*** are numbered on each side of zero (+ and –) for comparative measurements. ***Combination dials*** have a continuous scale numbered in a clockwise direction and a balanced scale numbered on each side of zero (+ and –).

Certificates of calibration are traceable to NIST.

Also Available: Replacement indicator backs in additional styles.

For Mitutoyo indicators, please ask for 20625A911 and specify 1/4″ lug back, flat back, or magnetic base and AGD Group.

For Starrett indicators, please ask for 20625A711 and specify 1/4″ lug back, flat back, universal back, or magnetic base and AGD Group.

For standard indicators, please ask for 20625A811 and specify 1/4″ lug back or flat back and AGD Group.

Dial Indicator/Magnetic-Base Set— Includes indicator 20715A69 and magnetic-base holder with rigid arm (1958A31 on page 2284).

20715A44 ..... $35.57

● Has plain bearings. ♣ Dial face is black with high-visibility markings. ■ Can read inch and metric simultaneously (to 25 mm).

Starrett Plunger-Style Dial Test Indicators

Indicators

Rugged plunger-style construction has few moving parts to wear out. Indicators have jeweled bearings; a 1/4″ dia. mounting stem; 0.125″, 0.3″, and 0.5″ dia. contact points; and a tip adapter for 4-48 threaded contact points. They also have a 1 3/8″ dia. rotating dial with a white face. Dial hand moves clockwise.

Certificate of calibration is traceable to NIST.

Replacement Contact Points and Accessories

(D) Swivel clamp has a 5/16″ dia. mounting hole and a 3/32″-1/4″ dia. hole for holding indicators, upright posts, and holding rods.

(E) Tip adapter allows you to use an AGD dial indicator with 4-48 threaded contact point.

(F) Hole attachment is for inside holes up to 1 5/8″ deep.

(G) Tool post holder measures 6″ Lg.×3/4″ Wd.×3/8″ Thick. and has a 5/16″ Dia.×4 1/2″ Lg. upright post.

(H) Clamp allows the indicator to be securely attached to machine tools. It has a 5/16″ Dia.×3″ Lg. upright post.

(J) Upright post is 5/16″ Dia.×4 1/2″ Lg.

Starrett No. 711 Last Word Dial Test Indicators

Half of the dial face is white and the other half is shaded yellow to make measurements easier to read. Indicators have jeweled bearings and a 1″ dia. rotating dial. The dial hand moves clockwise and counterclockwise. The contact point is steel, 0.120″ Dia.× 5/32″ Lg., swivels 180°, and has a ratcheting positioner joint to adjust to various angles.

Standard indicators include a mounting clamp that fastens to a 1/8″-1/4″ dia. indicator holding rod. ***Indicators with universal shank*** mount to a lathe tool post or height gauge. A mounting clamp with two arms to hold the indicator is included.

Indicator sets include an indicator with universal shank and 0.035″, 0.062″, and 0.120″ dia. contact points. They also include a body clamp, a holder with 3/16″ dia. shank, a tool post holder with 1/4″ dia. swivel post, a two-joint extension, a female coupling with 3/16″ opening on each end, a height gauge attachment, and a surface gauge attachment.

Starrett Dial Test Indicators

An angled head provides a better reading position and three dovetail mounts give you mounting versatility. Indicators are lever style and have jeweled bearings and a 1 3/8″ dia. rotating dial with a white face. Contact point is carbide, 0.078″ dia., and swivels 180°. Dial hand moves clockwise. A case is included.

Indicator sets include an indicator and 0.078″ dia. contact point. They also include a dovetail clamp with 3/16″ dia. stem, a tool post holder with 1/4″ dia. upright post, a swivel clamp with dovetail mount, and a swivel-clamp rod unit with one 1/4″ Dia.×4″ Lg. rod and one 3/8″ Dia.×4″ Lg. rod. **To Order:** For 20965A16 and 20965A12, please specify black, red, or white dial face.

Starrett Swivel-Head Dial Test Indicators

A 1 3/8″ dia. rotating dial pivots 90° so indicators can be used in vertical, horizontal, and angular positions. They are lever style and have jeweled bearings and two dovetail mounts. Contact point is 0.078″ dia. and swivels 180°. Dial hand moves clockwise.

Indicators include a dovetail mounting clamp with 3/16″ mounting stem; tool post holder with 1/4″ Dia.×1 5/16″ Lg. upright post and 1/4″×1/2″ body; swivel clamp with dovetail mount that fits 3/32″-1/4″ dia. rods; and a swivel clamp with two 4″ long rods (one is 1/4″ dia., the other is 3/8″ dia.). A case is included.

To Order: For 8591A62 and A61, please specify black, red, or white dial face. 8591A13 has a yellow dial face.

Miti-Mite Magnetic-Base Set

Includes test indicator 2047A72 and a magnetic V-shaped base. The base is 1 1/4″ Sq.×1 3/4″ Ht., has a 23-lb. magnetic pull, and attaches to rounded and flat surfaces. Ball-and-socket action of the posts and a fine adjustment screw allows a variety of setups. Set also includes one 7/32″ Dia.×1 1/2″ Lg. and one 5/16″ Dia.×1 1/2″ Lg. upright post as well as a 7/32″ Dia.×4 3/8″ Lg. indicator holding rod. A case is included.

23185A65 ..... $329.47

Wide-Range Interapid Dial Test Indicators

Interapid indicators measure larger ranges than other indicators. They're lever style and have jeweled bearings, a 5/32″ dia. mounting stem, a 0.080″ Dia.×0.65″ Lg. carbide contact point, a white dial face, and a rotating dial with a revolution counter to keep track of hand revolutions. Dial hand moves clockwise and counterclockwise. A case is included.

Horizontal indicators have two dovetail mounts. Contact point swivels 210°. ***Vertical indicators*** have one dovetail mount. Contact point swivels 190°.

Replacement contact points fit all Interapid indicators listed.

Mounting Stem Adapter

Increase the diameter of your indicator mounting stem from 5/32″ to 3/8″ so your indicator can mount to magnetic-base holders that fit 3/8″ diameter stems.

19515A86 ..... $16.55

Economy Dial Test Indicators

These lever-style test indicators have a 0.078″ Dia.×1/2″ Lg. carbide contact point that swivels 180°. They also have jeweled bearings, a 19/32″ dia. rotating dial with white face, and two dovetail mounting clamps (one with 5/32″ dia. mounting stem, one with 3/8″ dia. mounting stem). Dial hand moves clockwise. Accuracy for 0.008″ gauge is ±0.00015″; 0.030″ gauge is ±0.0004″. A case is included.

Indicator/base sets include indicator 3295A15 and a rigid- or jointed-arm magnetic base.

Indicator with Jointed-Arm Magnetic Base Set			3295A55	82.49		

Chain-Clamp Holders

18″ chain-clamp holder has a 2″ Lg.×3/4″ Wd. steel body with four 5/16″ dia. threaded holes (three on the side; one on the top). Includes one 5/16″ Dia.×4″ Lg. and one 5/16″ Dia.×6″ Lg. steel holding rod and an ANSI No. 35 chain with 6″ dia. capacity.

24″ chain-clamp holder has an aluminum body with one 5/16″ Dia.×3″ Lg. and one 5/16″ Dia.×6″ Lg. stainless steel holding rod and an ANSI No. 41 chain with 9″ dia. capacity.

Alignment Kit—Includes two chain clamps, an inspection mirror, and a case.

Alignment Kit with Test Indicators—Two chain clamps position the two Starrett 196B1 indicators (included) at different points along a shaft to find any misalignment. Indicators have a 0-0.2″ range and are graduated in 0.001″ increments with a 0-100 dial reading. Kit also includes two swivel clamps, an inspection mirror, and a case.

24″ Chain-Clamp Holder

18″ Chain-Clamp Holder	21025A21	$104.44

Alignment Kit with Test Indicators	2593A13	856.25

Electronic and Dial Indicator Attachments

Attachments fit electronic and dial indicators that conform to AGD (American Gauge Design) standards. All are made of steel.

Holding Rods

Use with swivel clamps for easy positioning of indicators. Have 1/4″ lug mount.

Dia.	Lg.		
5/16″	6″	20625A311	$21.82

Contact Point Sets

Starrett No. 25 R

The most popular indicator points with 4-48 threads. Lengths don't include threads.

Starrett No. 25 R— Has 14 points on an aluminum ring for fast, easy selection. Includes one regular 1/4″ lg. point; nine special-form points; one anvil; and three extra-long regular points (1/2″, 3/4″, and 1″ long).

Economy— Has 22 points in a case. Includes nine flat points 0.175″ to 1.250″ long; five regular points 0.225″ to 0.825″ long; four tapered points 0.500″ to 0.875″ long; three needle points 0.935″ to 1.35″ long; and one bent needle point 0.312″ long.

Starrett No. 25 R	2193A11	$110.00

Backs

Flat Back

Lug Back

Universal (Starrett Only)

Starrett— Only fit Starrett indicators, not all AGD. **To Order:** Specify AGD Group No. and flat, 1/4″ lug, universal, or magnetic back.

Chicago Dial (CDI)— **To Order:** Specify AGD Group No. and flat or 1/4″ lug back.

Mitutoyo— **To Order:** Specify AGD Group No. and flat, 1/4″ lug, or magnetic back.

Manufacturer	
Starrett	20625A711
Chicago Dial (CDI)	20625A811
Mitutoyo	20625A911

Thread Adapter

Has 4-48 female threads at one end and M2.5 male at the other. 7/32″ Dia.×1/2″ Lg. Length doesn't include external threads.

20625A155 ..... $4.16

Tungsten Carbide and Ruby Contact Points

Replace your standard steel point. Points are hard, smooth, and precision ground to 0.000025″ (Grade 25). They fit indicators that conform to AGD Groups 1, 2, 3, and 4. Tip length doesn't include threads.

Tungsten carbide provides excellent wear resistance and lasts much longer than standard steel contact points. ***Ruby*** provides excellent chemical and thermal stability with extremely low friction.

Tip Lg.	Ball Size	Thread Mount	*Tungsten Carbide*		*Ruby*	
1/4″	3 mm	4-48	1851A11	$14.62	1853A11	$16.09

3/4″	4 mm	4-48	1851A19	17.26	1853A19	19.53

Ball Contact Points

Precision ground to 0.000025″ (Grade 25), these hard, smooth points have a large contact area ideal for measuring contoured shapes. Attach them directly to your indicator, replacing standard steel points. They fit indicators that conform to AGD Groups 1, 2, 3, and 4. Made of chrome alloy steel.

To Order: Please specify size needed.

Available Ball Sizes	Thread Mount		
0.031″, 0.046″, 0.062″, 0.078″, 0.093″, 0.125″, 0.156″, 0.187″, 0.218″, 0.250″	4-48	1922A11	$11.23

Miniature Magnetic Holders

Get 45 lbs. of magnetic pull with six locations for mounting indicators and accessories. Holder has three 1/4″-20 threaded holes, one 10-32 threaded hole, one hole for a 3/8″ dia. stem, and a V-shaped hole for a 1/8″ to 5/16″ dia. stem. One 1/4″-20 thumbscrew and one 10-32 thumbscrew are included. Body is 4 3/8″ Lg.×1″ Wd.×1 1/16″ Ht.

23105A65 ..... $15.00

Clamp-On Holders

Attach the C-clamp almost anywhere for hands-free measurements. Holders include an extension rod with a fine-adjustment knob for precise positioning. They accept a 5/32″ dia. stem or a 1/4″ dovetail mount. 20945A65 is for use on Bridgeport "J" heads.

●Distance from center of mounting clamp (A) to end of arm (B) when both are extended.

Test Indicator Attachments

Universal Shank

Mount an indicator to a lathe tool post or height gauge. An elbow connects the 3/16″ dia. shank and 1/2″ Wd.×1/4″ Thick. body. Length is 4 1/4″.

1987A32 ..... $13.00

Double-Jointed Attachment

Flexes in two directions. Has one 1/4″ dia. shank and one 3/8″ dia. shank. Length is 5 3/8″.

1987A19 ..... $18.51

Tool-Post Holder

Body is 1/2″ Wd.×1/4″ Thick. Mounting rod is 1/4″ Dia.×15/16″ Lg.

1987A16 ..... $19.00

Body Clamp

Has a 3/8″ dia. hole and a hole that adjusts from 1/8″ to 1/4″ dia.

1987A23 ..... $11.51

Swivel Clamp with Dovetail Groove

Has a dovetail groove and a hole that adjusts from 3/32″ to 1/4″ dia.

1987A69 ..... $19.00

Long and Short Arm

Has two 3/16″ dia. shanks with an elbow. Tool is 2″ Lg. Short arm is 13/16″ Lg.; long arm is 1 3/16″ Lg.

1987A21 ..... $8.20

Dovetail Holder with Shank

Has a dovetail groove and a 5/8″ long shank.

To Order: Specify shank dia.: 5/32″, 7/32″, 1/4″, or 5/16″.

1987A146 ..... $11.96

Universal Dovetail Holder

Has a swiveling dovetail groove and 1/4″ dia. shank. Length is 3″.

1987A65 ..... $13.95

Swivel Support Dovetail Holder

Has a swiveling dovetail groove and a 3/8″ dia. shank. Length is 2″.

1987A53 ..... $26.74

Dovetail Body Clamp

Has a dovetail groove and a 3/16″ dia. rotating ball shank. Length is 2″.

1987A7 ..... $19.00

Double-Jointed Holder with Dovetail Groove

Flexes in two directions. Has a dovetail groove and 3/8″ dia. shank. Length is 4 1/2″.

1987A52 ..... $32.56

Combination Stem/Dovetail Holder

5 1/2″ long and it flexes in three directions. Has a dovetail groove, one 5/32″ and one 1/4″ dia. hole, and a 3/8″ dia. shank.

1987A51 ..... $27.91

Height Gauge Attachment

Has a 3″ Lg.×1/4″ Wd.×1/2″ Ht. gauge bar and a 0.218″ Dia.×0.343″ Ht. post. Has a dovetail groove and two 7/32″ dia. and one 5/32″ dia. mounting holes for holding indicators.

1987A28 ..... $38.24

Starrett Rotating Friction Attachment for Last Word Indicators

Fits into the end plug located on top of an indicator to provide a rotating ball mount. Shank is 3/16″ dia. Overall length is 2″.

1987A24 ..... $11.71

Indicator Swivel Clamps

Secure indicators, upright posts, and indicator holding rods at any angle. All wing nuts are nylon with brass inserts. *Dual wing nuts* tighten the two sides independently.

Low-Profile Magnetic-Base Holders

Standard

Universal

Direct Mount

Confidently position indicators in areas where vertical space is limited. Bases have 50 lbs. of magnetic pull and a magnetic-release switch.

Standard holder has a fine-adjustment knob for precise positioning. Holding rod is 1/4″ Dia.×6″ Lg. and sits in a ball socket for versatile positioning.

Universal holder has a swivel block that holds the arm at any angle and a fine-adjustment knob for precise positioning. Holding rod is 1/4″ Dia.×6″ Lg. and can be removed to hold a 1/4″ lug back.

Direct-mount holder has a nut and bolt to mount a 1/4″ lug back to the base.

	Base Lg.	Base Wd.	Base Ht.		
Standard	3 1/2″	1 1/8″	1″	**2122A2**	$38.41

Direct Mount	3 1/2″	1 1/8″	1″	**2098A1**	26.60

Magnetic-Base Holders for Uneven Surfaces

A specially designed bottom allows base to conform to any shape and grip most surfaces. Bases have 120 lbs. of magnetic pull and a magnetic-release switch. The hole on top of the base has M8×1.25 mm threads. Holders are 2 1/2″ Lg.×2″ Wd.×2 1/4″ Ht.

Rigid arm holder has a fine-adjustment knob. Arm is 15/32″ Dia.×3 1/2″ Lg. and has a swivel clamp at the end that accepts a 5/32″ to 3/8″ dia. stem or a 1/4″ lug back. Upright post is 15/32″ Dia.×7″ Lg.

Flexible arm holder has a ball-and-socket segmented arm for flexibility in accessing awkward spots. Arm is 12 1/2″ Lg. and has a swivel clamp at the end that accepts a 5/64″ to 1/2″ dia. stem.

Rigid Arm

Flexible-Arm Magnetic-Base Holders

Adjust the arm to nearly any position for use in tight spots. Holders have a ball-and-socket segmented arm that locks in place with a lever. Base has a magnetic-release switch.

(A) Standard— Arm is 12½″ long and has a swivel clamp that accepts a 5⁄32″ to ½″ dia. stem. Base has a V-grooved bottom.

(B) Fine Adjustment— Has a knob for precise positioning. Arm is 14″ long and has a swivel clamp that accepts a ⅛″ to ½″ dia. stem. Base has a flat bottom.

(C) Super-Fine Adjustment— A micro-screw thumb adjuster allows exact positioning. Arm is 15¼″ long and has a swivel clamp that accepts a ⅜″ dia. stem or an indicator with dovetail mount. Base has a V-grooved bottom.

	Magnetic Pull, lbs.	Base Lg.	Base Wd.	Base Ht.	Holders		Repl. Arms

Vise-Grip Flexible-Arm Holders

Clamp securely to a variety of surfaces to position an indicator around any obstruction. Holders have a 13″ long flexible arm attached to Vise-Grip locking pliers. The pliers have two threaded holes to mount the arm horizontally or vertically. A lever locks the arm. A swivel clamp at the end of the arm accepts a ⅛″ to ½″ dia. stem.

Holder	23165A75	$91.40
Replacement Arm	23165A76	49.00

Starrett Electronic Height Gauges

Read measurements from both the LCD and the graduated scale on the column. LCD measures in 0.0005″ and 0.01 mm increments; scale in 0.100″. Accuracy for 12″ gauge is ±0.0015″ and ±0.002″ for 24″ gauge. Set the gauges to zero at any position.

They have SPC data output so they can be connected to a Starrett data collector using an SPC data output cable (sold separately below). A carbide-tipped scriber with clamp and batteries are included.

Magnetic-Base Holders

Standard

A solid mount offers numerous positioning options. Holders have a swivel clamp on both the upright post and rigid arm and a fine-adjustment knob. All accept a ¼″ lug back. Base has a magnetic-release switch.

Economy holder is 2½″ Lg. × 2″ Wd. × 2¼″ Ht. and also accepts a ⅜″ dia. stem. Upright post has M8 × 6.5 mm threads. Has a V-grooved bottom.

Standard holders have an upright post with M8 × 1.25 mm threads and a V-grooved bottom.

2310A1 and 2310A15 are 2⅝″ Lg. × 2¼″ Wd. × 2″ Ht. and also accept a 5⁄32″ to ¼″ dia. stem.

2310A16 is 3″ Lg. × 2″ Wd. × 2¼″ Ht. and also accepts a ¼″ to 5⁄16″ dia. stem.

Starrett holder is 1⅞″ Lg. × 1⅝″ Wd. × 2″ Ht. and also accepts a ¼″ dia. stem. Upright post has ¼″-20 threads. Has a flat bottom.

♦ Does not have a fine-adjustment knob.

Jointed-Arm Magnetic-Base Holders

Standard

Control the joints at the top, middle, and bottom of the arm with the locking knob. A fine-adjustment knob allows precise positioning and a swivel clamp provides a wide range of positions. Holders accept a ⅜″ dia. stem or an indicator with dovetail mount. Base has a magnetic-release switch and V-grooved bottom.

Mitutoyo Electronic Height Gauges

Series 192

Series 570

Gauges have a low-battery indicator and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so you can connect them to a Mitutoyo miniprocessor using an SPC data output cable, or to your PC using an SPC data output cable and an input tool (output cable is sold below; see pages 2269-2270 for Mitutoyo miniprocessor and input tool). A carbide-tipped scriber with clamp and a battery are included.

Series 192 gauges have a dual-column design and an error alarm. They measure in 0.0005″ and 0.01 mm increments. Accuracy is ±0.001″ and 0.03 mm for 12″ gauge; ±0.002″ and 0.04 mm for 18″ gauge; and ±0.002″ and 0.05 mm for 24″ gauge.

Series 570 gauges have a handwheel for smooth movement along the column. They measure in 0.0005″ increments. Accuracy is ±0.0015″ for 12″ gauge; ±0.002″ for 18″ and 24″ gauges.

Mitutoyo Height Gauges

Gauges have a hardened stainless steel column for wear resistance and a fine-adjustment knob for precise positioning.

They measure in 0.001″ increments. Accuracy is ±0.001″ for the 8″ gauge; ±0.002″ for the 12″ gauge. A carbide-tipped scriber with clamp is included.

Economy Dual-Reading Height Gauges

In addition to the dial, two mechanical digital counters display measurements (one counts up; the other counts down).

Dial measures in 0.001″ increments; the counters in 0.1″ increments. A carbide-tipped scriber with clamp is included.

Starrett Surface Gauges

Use these versatile gauges as height and depth gauges, as indicator holders, or for transferring lines from one part to another. All have a fine-adjustment screw, a scriber with clamp, and a V-grooved bottom.

Gauge pins can be pushed down for use against the edge of a surface plate or T-slot for linear work.

Easy-View Electronic Edge Finders

A bulb lights up to give you 360° visibility when positioning work surfaces and tools. Batteries are included.

Note: These items will not work with nonconductive materials such as plastic and wood or with rotating surfaces such as spinning wheels.

(G) Standard finder emits light when the sensor shaft reaches the edge of the surface. Made of Type 304 stainless steel.

(H&J) Precision finders have a highly perceptive sensing system with a spring-loaded probe to allow for overrun without breaking. Made of steel. *Style H* finds workpiece edges. *Style J* is for measuring and setting cutting tool height.

Replacement Styli and Accessories for Renishaw CMM Probes

Mount styli and accessories into coordinate-measuring machine (CMM) probes. **Also Available:** M4 threads for all items. Please ask for 85175A999.

(A-C) Styli—300 series stainless steel bodies with Grade 10 ruby balls. Sphericity tolerance is ±0.00001″ and diameter tolerance is ±0.00001″.

(D) Stylus Extensions—Allow for added penetration. Made of 300 series stainless steel.

(E) Five-Way Stylus Crosshead Center—Holds up to five styli. Made of 300 series stainless steel.

(F) Universal Stylus Wrench—Fits all Renishaw CMM styli. Has two diameters (1.27 mm and 1.73 mm). Made of steel.

Starrett Wiggler/Center Finder Sets

Determine tool spindle position in relation to work surface, layout lines, holes, and slots.

Set includes a chuck, an offset indicator holder, a 0.10″ dia. disc contact, a 0.25″ dia. ball contact, and a needle point. Attachments are interchangeable.

8632A72 ..... $51.01

Center Finders for Round Bar and Pipe

Find the center point on round workpieces. Mount center finder into your drill chuck or collet, place it over round bar stock, and line up the pointer with the mark on the shaft. Capacity is 5″. Made of steel with a corrosion-resistant chrome finish.

22025A11 ..... $12.02

Edge Finders

Locate working edges, shoulders, center points, and lines. All are made of steel.

Audible edge finders make a distinct sound when tip runs concentric with shank (for edge positioning; not for center points).

Feeler Thickness Gauges

Check gaps, alignment, and narrow slots. All gauges are 1/2″ wide. ***12″ Lengths—*** Have rounded ends and are marked with thickness. ***Rolls—*** Come in a dispenser box. Cut to length needed. Thickness is marked every 6″.

Steel is polished and magnetic. ***Type 302/304 stainless steel*** is corrosion resistant and mildly magnetic. ***Type 316 stainless steel*** has superior resistance to corrosion and is mildly magnetic. ***Brass*** is corrosion resistant and nonmagnetic.

Feeler Thickness Gauge Sets

Sets consist of 1/2″ wide leaves nested in a high-quality steel frame. Each leaf is clearly marked with the thickness. A lock keeps individual leaves secure in any position (except 2334A65 and A66).

Certificates of calibration are traceable to NIST.

Plastic Color-Coded Feeler Thickness Gauges

Each thickness is a different color—no more stopping to read the thickness each time you check gaps. Gauges are also nonmagnetic, nonmarring, noncorrosive, nonsparking, and resistant to oil.

Gauges have square ends and can be cut with scissors. Size is 12″ Lg. × 1/2″ Wd.

Gauge sets have a fan design to keep gauges together and easily accessible. Leaves are 1/2″ wide and have rounded ends.

One End	2322A11	$25.01
Both Ends	2322A12	28.50

For information about go/no-go measurement, see page 2289.

Starrett Tapered Thickness Gauges

Starrett No. 270

Starrett No. 269A and No. 269B

Starrett No. 267

Starrett No. 270 gauge tapers in thickness throughout its length. One side measures in 0.001″ increments, the other in 0.05 mm increments. Made of tool steel. Size is 6¼″ Lg.×7/16″ Wd. *Certificate of calibration* is traceable to NIST.

Starrett No. 269A and ***269B*** gauges measure in 0.001″ increments. Made of tempered steel. Closed size for 8611A55 is 2½″ Lg.×½″ Wd.; 8611A56 is 2¾″ Lg.×1″ Wd.

Starrett No. 267 gauge measures in 1/64″ increments. Made of spring-tempered steel. Closed size is 5¼″ Lg.×1″ Wd.

Range	No. of Leaves	Starrett No.		
Gauges				
0.010″ to 0.150″ (0.3 to 4 mm)	1	270	8611A53	$104.00

Gauge with Certificate of Calibration				
0.010″ to 0.150″ (0.3 to 4 mm)	1	270	8611A62	115.90

Tapered Thickness Gauges

Replace a set of feeler thickness gauges with just one tapered gauge. Capable of measuring clearance, narrow slots, and gaps, these tools are more durable than other thickness gauges. They measure in 0.005″ increments. Made of black-oxide steel with white numerals for visibility.

Range	Blade Wd.	O'all Lg.		
0.005″ to 0.250″	1/4″	18″	8626A12	$414.86
0.020″ to 0.500″	1/4″	18″	8626A13	529.14
0.020″ to 0.500″	3/8″	18″	8626A14	565.33
0.370″ to 1.000″	3/8″	18″	8626A65	668.80

Combination Wire and Thickness Gauges

Get a tapered gauge, a wire gauge, and an assortment of thickness gauge leaves in one tool. All are steel and closed size is 4¾″ Lg.×½″ Wd.

Inch—*Tapered gauge* range is 1/64″ to 3/16″ in 1/64″ increments. *Wire gauge* is Birmingham Standard. It has sizes numbered from 19 to 36 plus 1/16″ and ⅛″. The reverse side gives equivalents in 0.001″. *Thickness leaves* are sizes 0.002″, 0.003″, 0.004″, 0.006″, 0.008″, 0.010″, 0.012″, 0.015″, and 1/16″.

Metric—*Tapered gauge* range is 0.5 to 5 mm in 0.5 mm increments. *Wire gauge* is English Standard. It has sizes numbered from 19 to 36 plus 1/16″ and ⅛″. The reverse side gives equivalents in 0.001″. *Thickness leaves* are sizes 0.04, 0.05, 0.06, 0.07, 0.08, 0.10, 0.15, 0.20, 0.30, 1, and 2 mm.

Inch	2323A11	$85.60
Metric	2323A13	161.01

Setting Rings

Set equipment and tooling such as calipers and gauges. Rings are Class Z, made of hardened ground steel, and have an aluminum heat shield. Rockwell hardness is C58-C60; surface smoothness is 10 microinches. Tolerance is ±0.0001″ for sizes up to 0.8125″; ±0.00012″ for sizes 0.8750″ to 1.5000″; and ±0.00016″ for sizes 1.7500″ to 2.0000″.

Also Available: Additional sizes in 0.0312″ increments. Please ask for 20785A81 and specify size.

Ring Gauges

All are made of tool steel. Rockwell hardness is C60-C62. Surface smoothness is 8 microinches for Class Z gauges and 4 microinches for Class X gauges. A certificate of accuracy traceable to NIST is included. **To Order:** Please specify size in 0.0001″ increments.

Go/no-go gauges let you inspect parts, shafts, and rods to determine if they pass or fail the tolerances.

Master gauges set inside micrometers, dial bore gauges, and other precision tools.

Plug Gauge Handles

Holding 0.03″ to 0.50″ plug gauges is easier with a handle. Go/no-go ends are clearly marked and bushings are not required. Made of aluminum.

Colored Handles— **To Order:** Please specify green, purple, red, or yellow.

Natural Aluminum	2302A55	$17.55
Colored	2302A11	20.10

Universal Plug Gauge Handles

No bushings needed—one handle covers a range of pins. Made of aluminum. One end is green and the other is red.

Black-Oxide Class ZZ Plug Gauges

A black-oxide treatment shows wear patterns when calibration or replacement is necessary. Gauges are made of tool steel and are 2″ long. Rockwell hardness is C60-C62; surface smoothness is 10 microinches or better. A certificate of accuracy traceable to NIST is included. Gauges 0.0610″ and larger are marked with size and direction of tolerance.

Go gauge tolerance is +0.0002″. *No-go gauge* tolerance is –0.0002″.

Gauges— **To Order:** Please specify size in 0.0005″ increments.

Gauge Sets— Measure in 0.001″ increments. A case is included.

About Go/No-Go Measurement

A go gauge checks the minimum hole diameter. A no-go gauge checks the maximum hole diameter. If the go gauge enters the hole and the no-go gauge is unable to enter, the design specifications of the hole have been met.

Plug Gauges

Also known as pin gauges, use plug gauges for precision go/no-go measuring of hole sizes and depths, checking hole location and distance, and setting micrometers.

Gauges are heat-treated tool steel. Rockwell hardness is C60-C62. They are 2″ long, except extra-long Class ZZ inch style, which are 4″ long. All come with a certificate of accuracy traceable to NIST.

Class Z and ***Class ZZ*** gauges 0.0610″ and 1.52 mm and larger are etched with the size and "+" (go) or "–" (no-go).

For information about go/no-go measurements, see page 2289.

Target-Size Plug Gauge Sets

Get your choice of one target-size gauge with 12 larger gauges and 12 smaller gauges, graduated in increments of 0.0001″. Also known as "tenth step" gauges, they're often used in metrology labs, quality control departments, and tool rooms for setting snap gauges and comparators. Sets are Class X and Rockwell hardness is C60-C62; surface smoothness is 2 microinches or better. All are 2″ long and made of heat-treated tool steel. Gauges 0.0610″ and larger are etched with size. A case and a certificate of accuracy traceable to NIST are included. **To Order:** Please specify nominal (target) size.

Go gauges have a tolerance of +0.00004″. ***No-go gauges*** have a tolerance of –0.00004″.

Nominal (Target) Size	Go Gauges	No-Go Gauges	
0.0110″ to 0.0609″	2149A11	2149A51	$316.05
0.0610″ to 0.2509″	2149A13	2149A53	161.70
0.2510″ to 0.5009″	2149A15	2149A55	184.72
0.5010″ to 0.7499″	2149A17	2149A57	254.92
0.7500″ to 0.8129″	2149A19	2149A59	356.87

Thread Gauges

Inspect internal and external threads on parts. All are tool steel and include a certificate of accuracy traceable to NIST.
Plug gauges have external (male) threads to measure internal (female) threads.
Ring gauges have internal (female) threads to measure external (male) threads.

Inch and Metric Thread Gauges

Plug Gauge

Ring Gauge

Plug Gauges— Have a threaded (taperlock) handle with a go gauge on one end and a no-go gauge on the other. They are chrome plated and marked with thread size. Rockwell hardness is C70-C72.

Ring Gauges— The no-go gauges are also known as "lo" gauges. Rockwell hardness is C60-C62.

Inch gauges meet Class X tolerance for pitch diameter: ±0.0002″ for 80 to 36 threads/in.; ±0.0003″ for 32 to 9 threads/in.; and ±0.004″ for 7 threads/in.

Threads have different classes of fit. "Fit" designates the tightness or looseness of the mating threads. For example, inch threads with a 3A fit have tighter tolerances than threads with a 2A fit. *Plug gauges* are offered in 2B and 3B thread fit; *ring gauges* are offered in 2A and 3A thread fit. **To Order:** Please specify thread fit.

Metric gauges meet Class X tolerance for pitch diameter: ±0.005 mm for 0.35 to 0.7 threads/mm and ±0.008 mm for 0.8 to 2 threads/mm. *Plug gauges* have a 6H thread fit; *ring gauges* have a 6g thread fit.

Also Available: Thread gauges with certificate of calibration traceable to NIST.
For *inch plug gauges* please ask for 3157A9 and specify part number and thread fit.
For *inch ring gauges* please ask for 3160A9 and specify part number and thread fit.
For *metric plug gauges* please ask for 3206A9 and specify part number.
For *metric ring gauges* please ask for 3227A9 and specify part number.

NPT Pipe Thread Gauges

Plug Gauge

Ring Gauge

Meet Class X tolerance for pitch diameter: ±0.0002″ for 1/16″-27 to 3/8″-18 thread size and ±0.0003″ for 1/2″-14 to 2″-11 1/2 thread size. Rockwell hardness is C60-C62. Plug gauges also have a notch that indicates when the thread being measured is within tolerance.

Also Available: Thread gauges with certificate of calibration traceable to NIST. Please ask for 2121A9 and specify thread size and plug or ring gauge part number.

About Gauge Block Grades and Tolerances

Gauge blocks are classified by grades based on tolerance—the smaller the tolerance the greater the accuracy.

Sizes (S)	Inch Size Tolerances	
	Grade 0	Grade AS-1
0-0.050″	+0.000006″, –0.000006″	+0.000012″, –0.000012″
0.051″-1″	+0.000006″, –0.000006″	+0.000012″, –0.000012″
2″	+0.000008″, –0.000008″	+0.000016″, –0.000016″
3″	+0.000010″, –0.000010″	+0.000020″, –0.000020″
4″	+0.000012″, –0.000012″	+0.000024″, –0.000024″
5″	+0.000016″, –0.000016″	+0.000032″, –0.000032″
6″	+0.000016″, –0.000016″	+0.000032″, –0.000032″
8″	+0.000020″, –0.000020″	+0.000040″, –0.000040″
12″	+0.000028″, –0.000028″	+0.000056″, –0.000056″

Sizes (S), mm	Metric Size Tolerances, mm

Gauge Blocks

Precision gauge blocks are vital to dimensional quality control. They're commonly used for exacting layout, machine setup, and production of close-tolerance dies and fixtures. They are also excellent for checking the accuracy of measuring instruments such as micrometers. Blocks are high-carbon, high-chrome steel and have excellent stability and resistance to thermal expansion. They are individually numbered for recalibration at a later date. All meet ASME B89.1.9.

Block size (S) refers to the distance between the block's two measuring surfaces. To get a size that isn't offered below, press two clean blocks together with a twisting/sliding motion.

Rectangular Blocks—Dimension (A) is 0.354″ (9 mm). Dimension (B) for 0″ to 0.400″ blocks is 1.181″ (30 mm); Dimension (B) for 0.450″ blocks and larger is 1.378″ (35 mm).

Square Blocks—Dimensions (A) and (B) are both 0.949″ (24.1 mm).

Mitutoyo Grade 0 Gauge Blocks

All include a certificate of accuracy traceable to NIST. **To Order:** Where applicable, specify size from ranges shown in the table.
Also Available: Grade AS-1 blocks in inch and Grade 0 in metric sizes. Ask for 1809A3 for inch or 2249A21 for metric and specify size.

Gauge Block Sets

Sets consist of rectangular blocks in a case. A certificate of calibration traceable to NIST is included, except Mitutoyo sets, which include a certificate of accuracy traceable to NIST.

9-Block Inch Sets—One block each in sizes 0.0625″, 0.100″, 0.125″, 0.200″, 0.250″, 0.300″, 0.500″, 1.000″, and 2.000″. 2210A12 and A67 include an optical flat to check flatness and parallelism.

34-Block Inch Set—Nine blocks in sizes 0.1001″ to 0.1009″ in 0.0001″ increments; nine blocks in sizes 0.101″ to 0.109″ in 0.001″ increments; nine blocks in sizes 0.110″ to 0.190″ in 0.01″ increments; one block each in sizes 0.100″, 0.200″, 0.300″, 0.500″, 1.000″, 2.000″, and 4.000″.

35-Block Inch Set—One block in size 0.10005″; nine blocks in sizes 0.1001″ to 0.1009″ in 0.0001″ increments; nine blocks in sizes 0.101″ to 0.109″ in 0.001″ increments; 10 blocks in sizes 0.100″ to 0.190″ in 0.01″ increments; one block each in sizes 0.200″, 0.300″, 0.500″, 1.000″, 2.000″, and 4.000″.

36-Block Inch Sets—Nine blocks in sizes 0.1001″ to 0.1009″ in 0.0001″ increments; nine blocks in sizes 0.101″ to 0.109″ in 0.001″ increments; nine blocks in sizes 0.110″ to 0.190″ in 0.01″ increments; five blocks in sizes 0.100″ to 0.500″ in 0.1″ increments; one block each in sizes 0.050″, 1.000″, 2.000″, and 4.000″.

81-Block Inch Sets—Nine blocks in sizes 0.1001″ to 0.1009″ in 0.0001″ increments; 49 blocks in sizes 0.101″ to 0.149″ in 0.001″ increments; 19 blocks in sizes 0.050″ to 0.950″ in 0.05″ increments; four blocks in sizes 1.000″ to 4.000″ in 1″ increments.

10-Block Metric Sets—One block each in sizes 1, 1.25, 1.5, 2, 3, 5, 10, 15, 20, and 25 mm.

47-Block Metric Set—One block in size 1.005 mm; 19 blocks in sizes 1.01 to 1.19 mm in 0.01 mm increments; eight blocks in sizes 1.2 to 1.9 mm in 0.1 mm increments; 10 blocks in sizes 1 to 10 mm in 1 mm increments; nine blocks in sizes 20 to 100 mm in 10 mm increments.

87-Block Metric Sets—2262A3 has nine blocks in sizes 1.001 to 1.009 mm in 0.001 mm increments; 49 blocks in sizes 1.01 to 1.49 mm in 0.01 mm increments; 19 blocks in sizes 0.5 to 9.5 mm in 0.5 mm increments; 10 blocks in sizes 10 to 100 mm in 10 mm increments.

2226A2 has nine blocks in sizes 1.001 to 1.009 mm in 0.001 mm increments; 50 blocks in sizes 1.01 to 1.50 mm in 0.01 mm increments; 17 blocks in sizes 2 to 10 mm in 0.5 mm increments; nine blocks in sizes 20 to 100 mm in 10 mm increments; one 0.5 mm block; one 1 mm block.

Global Positioning System Receiver

Never get lost again—this pocket-size receiver provides latitude, longitude, and direction. It has a built-in worldwide map (with major rivers, lakes, and cities). It also stores points of interest, trails, and routes. Has a full color 2.2″ display. Accurate to within 10 to 16 ft.

Receiver is weather resistant, has 500 MB of usable memory, and includes a user guide. Operates on two AA batteries (included). Operating temperature range is 14° to 140° F. Designed for outdoor use; not suitable for indoor use due to poor satellite reception in buildings.

	Overall Size		Each
Receiver	4.4″ Ht. × 2.2″ Wd. × 1.4″ Dp.	21395A41	$249.61
Replacement AA Battery (Requires 2)		65605T72	.68
Optional Carrying Case		21395A44	25.07

Tripods

E

F

G

Made of aluminum with changeable feet—sharp points and rubber (unless noted). Head is flat. Use ***Style F*** with optical plumb instruments. It has an opening for aligning plumb crosshairs to a reference point on the ground. ***Thread adapter*** converts ⅝″-11 male threads to ¼″-20 male threads.

	Mounting Thread(s), Male	Height		Each
E	½″-20, ⅝″-11	38″ to 63″	8973A84■	$96.17
F	⅝″-11	42″ to 65″	8973A81	88.02
G	3½″-8	42″ to 65″	8973A83	208.23
Thread Adapter			8973A43	Each $23.37

■ Sharp point feet only.

Levels and Transit Levels

Manual Level

Automatic Level

Standard Transit Level

Transit Level with Laser Plumb Dot

Levels—Can be turned sideways, but cannot be tilted up or down. *Manual level* has four leveling screws to adjust line of sight. *Automatic levels* have a compensator that automatically adjusts the line of sight and keeps it level if bumped or moved by vibration.

Transit Levels—Can turn sideways and tilt up and down, thus they indicate not only true horizontal, but also the angle of inclination. *Standard* has four leveling screws to adjust line of sight, as well as a lever that quickly converts instrument from a transit level to a level. *Transit level with laser plumb dot* allows for fast and easy setup. Laser is Class IIM, 635 nm wavelength. It generates a ⅛″ dia. dot at 4′6″ with 2 minute sensitivity. Includes a CR123A lithium battery, carrying case, weather shade, and instructions.

Sets—Include a level, leveling rod, and tripod. *Leveling rod* aids sight leveling and is aluminum, telescopes from 4- to 8-ft. high, and is graduated in feet and inches to 8ths. *Tripod* is aluminum and adjusts from 38″ to 63″ high.

★ Measures in both directions.

Sight Levels

19225A68

19225A65

Quickly and accurately establish a level sight line with these yellow pocket-size instruments.

Nonmagnifying have an enclosed vial. 19225A62 has a lens crosshair and reference lines that correspond to the working distance. Comes with a pocket clip. 19225A68 (also known as an Abney level) is a topographic level with a radius arc graduated 0° to 90° in both directions, vernier reading to 10 minutes, and a grade scale of 0 to 100%. Comes with a padded belt-loop case.

Magnifying come with a padded belt-loop case. 19225A67 has 2X magnification of objective and an enclosed vial. 19225A65 has 5X magnification of objective and 2X magnification of level bubble. An objective lens is mounted on a movable slide to bring distant objects into sharp focus. Lens has reference lines that correspond to the working distance.

	Housing	Length		Each
Nonmagnifying	Aluminum	5″	19225A62	$19.39

Chalk Line Reels

Creating chalk lines couldn't be easier. These corrosion-resistant chalk line reels lock and include a line. Fill them with powdered marking chalk (sold separately on this page).

(A) Standard Chalk Line Reels—Have a durable cast aluminum case that fits in your pocket. Double as a plumb bob.

(B) Quick-Return Chalk Line Reel—Rewinds three times faster than other chalk line reels. Case is chrome-plated ABS plastic and fits in your pocket. Doubles as a plumb bob.

(C) Giant Chalk Line Reels—With a large chalk capacity these reels handle big jobs and make big, bold lines. Case is orange high-impact ABS plastic with a D-handle.

	Cord Lg., ft.	Chalk Cap., oz.	Complete Unit	Each	Repl. Lines	Each

♦ Cord Only. ♣ Cord with spool.

Smudge-Resistant Ink Line Reel

Making precise semipermanent lines is a snap with this ink line reel. It holds 65 ft. of nylon line and ⅔ oz. of ink. Plus, it automatically rewinds up to 25 ft. of line. Comes with a 3.5-oz. bottle of red quick-dry ink or choose a color from the ink sold separately.

2126A22 ..... Each $24.61

Multimount Cord Reel and Plumb Bob

Plumb work is quick and easy with this combination cord reel and plumb bob—an adjustable hook, magnet, and stainless steel pin allow for a variety of mounting settings. The cord reel includes 14½ ft. of braided nylon line that retracts automatically for easy cord storage.

The bob is 14 oz. and chrome plated. It has a quick-stabilizing cap that reduces bob wobble and spin. Cord reel also accepts any plumb bob from 3.5 to 35 oz.

2240A44 ..... Each $42.70

Marking Chalk

Nonpermanent and ***permanent powdered chalk*** comes in a plastic squeeze bottle with a long spout for effortless filling.

Chalk cake is a 2¼″ Dia.×1″ Ht. hemispherical cake.

Nonpermanent Powdered Chalk

Lime and *orange* colors are fluorescent.

Adjustable-Dot Lasers

20005A21 with Optional Bracket

20005A43

These tools make aligning and positioning machinery, tools, and equipment easier and more precise. Lasers also have a focus adjustment to produce a smaller dot at distances of 12 ft. or less. Dot is 1/32″ dia. at 3 ft., 1/16″ Ht.×⅛″ Wd. at 5 ft., 3/16″ Ht.×7/16″ Wd. at 25 ft., and ½″ Ht.×1¼″ Wd. at 100 ft. Recommended range is 0 to 100 ft. Laser is Class IIIA, 650 nm wavelength. Housing is aluminum. Laser has an on/off switch. For indoor use; visibility will decrease in brightly lit areas.

Flat Lasers—These lasers have a bottom that's machined flat to within 0.001″ and four 0.200″ dia. mounting holes (fasteners not included).

Battery powered lasers use one 3-volt lithium battery (sold separately) for 40 hours of continuous use. ***110 VAC powered*** lasers have a 6-ft. cord with two-prong plug.

Accessories—*Mounting bracket for cylindrical lasers* has a dovetail clamp and two 0.219″ dia. mounting holes (fasteners not included). Size is 1″ Lg.×1.120″ Wd.×1.470″ Ht.

Beam splitter converts laser dot into two dots that project at a 90° angle. The second dot can be locked at 12-, 3-, 6-, and 9-o'clock positions.

Variable-length line generator converts laser dot into a line length between 0-12″ at a 1 ft. distance. As the distance between laser and surface increases, line length increases at a 1:1 ratio.

Crosshair optics projects a dotted cross on a surface. Cross image increases 2″ in size for every 12″ of distance.

Variable brightness filter decreases dot brightness 5-95% for easier viewing.

Miniature Lasers

Simply hook these tiny lasers to a power source and you're ready to start aligning and positioning. The dot size and line width increase as the distance increases. Visibility will decrease in brightly lit areas.

Lasers with brass housing have built-in electronic protection against surges. Plus, the brass transfers heat away from the laser to prevent breakdown of the laser.

Lasers with Aluminum Housing and Plastic Lens

Fixed Dot w/Optional Laser Mount

Lasers have 12″ long wire leads with a plug that fits the optional plug-in transformer. Or you can cut off the plug and connect the wire leads to a 5 VDC power supply (operating voltage is 3.3-9 volts). For indoor use.

Fixed-dot laser projects a 3/8″ Ht.×3/4″ Wd. elliptical dot at 100 ft. Laser is IEC60825 Class 2, 670 nm wavelength.

Line-generator laser projects a line at a 90° viewing angle. Line is 2 ft. long at 1 ft.; 19 5/8 ft. long at 10 ft. Line is 0.118″ wide at 10 ft. Laser is IEC60825 Class 1M, 670 nm wavelength.

Optional laser mount allows for 80° rotation. It has a removable magnetic base and one 1/4″-20 threaded hole (fastener not included) for mounting. ***Optional plug-in transformer*** has 110 VAC input, 5 VDC output, and a 6-ft. cord with two-prong plug.

	Power, mW	O'all Size, Dia.×Lg.		Each
Fixed Dot	0.75-0.95	7/16″×1 7/16″	2073A11	$102.73
Line Generator	0.75-0.95	1/2″ ×1 15/16″	2073A21	130.00
Optional Laser Mount			2073A31	91.11
Optional 1″ OD Pipe Laser Mount			2073A32	78.55
Optional Plug-In Transformer			2073A33	66.93

Lasers with Brass/Aluminum Housing and Glass Lens

Fixed Dot w/Optional Laser Mount

Lasers have 36″ long wire leads that can be connected to a 5 VDC power source or to the optional male-plug connector and optional plug-in transformer.

Fixed-dot laser projects a 7/16″ dia. dot at 100 ft. Recommended range is 0 to 200 ft. Laser is Class IIIA, 670 nm wavelength. For indoor and outdoor use.

Line-generator laser projects a line at a 60° viewing angle. Line is 13 29/32″ long at 1 ft.; 41 5/8″ long at 3 ft. Line is about 0.059″ wide at 3 ft. Recommended range is 0 to 25 ft. Laser is Class II, 635 nm wavelength. For indoor use.

Optional laser mount holds a laser module horizontally or can be tilted 15° up or down. It also acts as a heat dissipater and electrical insulator. It is 1 3/4″ Ht.×1 1/2″ Wd.×1/2″ Dp. and has three mounting holes (two 8-32 and one 1/4″-20; fasteners not included). ***Optional plug-in transformer*** has 90-264 VAC input, 5 VDC output, and a 6-ft. cord with three-prong plug.

	Power, mW	O'all Size, Dia.×Lg.		Each
Fixed Dot	2.3	9/16″ ×1 3/4″	2046A12	$366.67

Optional Laser Mount			2046A31	134.59
Optional Male-Plug Connector			2046A32	8.89
Optional Plug-In Transformer			2046A33	84.44

Adjustable-Dot Laser with Brass Housing and Glass Lens

Laser

Laser Kit

Laser projects an elliptical dot that can be adjusted to a 1/32″ dia. dot at 3 ft. and a 1/8″ dia. dot at 25 ft. Recommended range is 0 to 100 ft. It has two 6″ long wire leads that connect to a 3-5 VDC power source. Laser is Class IIIA, 650 nm wavelength. For indoor use; must have a target or detector for outdoor use. Targets sold separately on page 2295.

Accepts the following series 20005A accessories sold on page 2293: beam splitter (A31), variable-length line generator (A32), crosshair optics (A33), and variable brightness filter (A34).

Laser kit includes laser, tube housing with X and Y adjustments to reposition beam without moving laser, 1″×1″ mounting bracket with eight 1/8″ dia. holes, and a 110 VAC power supply with a 6-ft. cord with two-prong plug.

Power, mW	Overall Size, Dia.×Lg.	Laser	Each	Laser Kit	Each
5.0	7/16″×1″	2055A11	$185.42	2055A21	$281.13

Right-Angle Line Laser

Project two right-angle lines for easier aligning. Plus, this laser has a built-in protractor so you can project beams at precise angles of 30°, 45°, 60°, 75°, and 90°. Line is 0.0625″ wide at 50 ft. Recommended range is 0 to 30 ft. Accuracy is ±1/4″ at 60 ft. Laser is Class IIIA, 635 nm wavelength. For indoor use. Visibility will decrease in brightly lit areas.

Housing is plastic with two slots for securing to a surface. Overall size is 6 1/8″ Lg.×6 1/8″ Wd.×1 15/16″ Ht. Operates on two AA batteries (included) for up to 30 hours of continuous use. Includes a target and a soft-sided case.

2019A33 ..... **Each** $82.38

Harsh Environment Dot Lasers

115 VAC with Optional Mounting Bracket and Base

Align and position tools, machinery, and conveyor equipment in washdown and harsh areas. These dot lasers have a sealed, watertight brass housing to keep out dust and moisture. Three removable covers are included to change the laser dot to 1/16″, 3/32″, or 1/8″ dia. at 18″. Recommended range is 0 to 100 ft. Accuracy is ±1/8″ at 100 ft. Temp. range is 14° to 122°F. Laser is Class IIIA, 635 nm wavelength. For indoor use; visibility will decrease in brightly lit areas.

115 VAC laser has a 6-ft. 2-wire cord with two-prong adapter.
4-24 VDC laser has a 6-ft. 2-wire cord with tinned leads.
Optional mounting bracket acts as a heat dissipater for all lasers.

	Overall Size		Each
115 VAC	3/4″ Dia.×3 1/4″ Lg.	5198T71	$382.69
4-24 VDC @ 50 mA	3/4″ Dia.×3 1/4″ Lg.	5198T72	286.54
Optional Mounting Bracket		5198T91	57.29
Optional Magnetic Base for Mounting Bracket		5198T92	40.62

Optional Line-Laser Lenses

Convert your dot laser into a line laser. These optical glass lenses thread easily to the above lasers. Line is 1/16″ wide at 3 ft. Housing is brass.

Line @ 18″ Distance	Viewing Angle		Each
6″ Lg.	20°	5198T84	$72.92
25″ Lg.	70°	5198T85	72.92

Center-Finding Dot Laser

with Drill Chuck (Not Included)

Precisely mark drilling positions and extend centerlines for alignment. Simply place the stud end of this tool into a drill or lathe chuck and it finds your center. Fits into any 1/4″ or larger chuck or hole. Four screws adjust the horizontal and vertical position of the beam.

Projects a dot that has a diameter between 0.1 and 0.5 mm. Recommended range is 1″ to 12″. Laser is Class IIIA, 650 nm wavelength. Housing is aircraft aluminum. Size is 3/4″ Dia.×2 3/4″ Lg. Operates on three 1.5-volt batteries (included); approximately three hours of continuous use. For indoor use; visibility will decrease in brightly lit areas.

Dot Laser ..... 2035A7 **Each** $158.46
Repl. Battery (3 req.) ..... 7604K14 **Each** $1.44

Multi-Dot Lasers

3 Dot ***5 Dot***

Multiple laser dots make layout, installation, and aligning work easier and quicker. These lasers project a 1/4″ dia. dot at 100 ft., automatically level themselves within 5°, and have an "out of level" indicator. Recommended range is 0 to 100 ft. For indoor use. Visibility will decrease in brightly lit areas. Housing is rubber-cushioned impact-resistant plastic.

3-dot plumb/level laser accuracy is ±1/4″ at 100 ft.; down plumb accuracy is ±1/4″ at 50 ft. Laser is Class III, 635 nm wavelengths. Size is 4 1/2″ Ht.×2 1/2″ Wd.×4″ Dp. Includes a magnetic wall bracket, a 1 1/2″ high floor stand, a target, and a padded nylon case. Operates on three AA batteries (included) for up to 15 hours of intermittent use. Lasers fit on tripods with a 1/4″-20 or 5/8″-11 connection. See page 2292 for tripods.

5-dot plumb/level/square laser accuracy is ±1/4″ at 100 ft.; down plumb accuracy is ±1/4″ at 100 ft. Laser is Class II, 635 nm wavelengths. Size is 4 1/8″ Ht.×3 1/8″ Wd.×1 5/8″ Dp. Includes a multipurpose magnetic attachment, mounting strap, a recalibration wrench, and a padded canvas case. Operates on three AA batteries (included) for up to 24 hours of intermittent use. Lasers fit on tripods with a 1/4″-20 connection. See page 2292 for tripods.

3-Dot Plumb/Level Laser Tool ..... 1986A13 **Each** $182.29
5-Dot Plumb/Level/Square Laser Tool ..... 1986A17 **Each** $244.44

Multiline Laser

Check plumb and level with ease. Laser projects lines at a 130° viewing angle and automatically levels itself. A switch lets you select between horizontal beam, vertical beam, or both beams at the same time. Lines are 100 ft. long and 0.079″ wide at 30 ft. Recommended range is 0 to 100 ft. Accuracy is ±3/32″ at 30 ft. Laser is Class II, 635 nm. For indoor use. Visibility will decrease in brightly lit areas. Laser has an impact-resistant molded-rubber housing. Overall size is 4″ Lg.×3″ Wd.×4 1/8″ Ht. Includes a 5″ high mini tripod, a magnetic mount, a hold-down strap, and a plastic case. Operates on three AA batteries (included) for up to 25 hours of continuous use and fits on tripods with a 1/4″-20 or 5/8″-11 connection. See page 2292 for tripods.

Multiline Laser ..... 4098T25 **Each** $270.48

360° Rotary Lasers

Get 360° leveling. These lasers can scan back and forth to appear as a short line (except for 19985A55) or rotate to appear as a horizontal line 360° around an enclosed area. Plus, a vertical plumb dot beam gives you a constant 90° squaring beam. Lasers can also be set on their side to produce a 360° rotating vertical line and a horizontal dot. Lasers are Class IIIA, 635 nm wavelength. Use indoors; for working outdoors use with the included laser-enhancing glasses. Visibility decreases in brightly lit areas. All include a detector for sensing the laser when it cannot be seen. Tools fit tripods with a 5/8″-11 connection (sold separately, see page 2292) and include a 6-volt adapter/charger, a carrying case, and batteries (unless noted).

Horizontal/vertical automatic leveling and ***horizontal automatic leveling/vertical manual leveling*** lasers have a self-leveling range for quick setup on uneven surfaces (±5° for 19985A42, ±3° for A55, and ±3.5° for A51) and an audible and visual alarm when laser is out of level. 19985A42 and A51 also include a remote control. Size is 5 3/4″ Lg. × 7 3/4″ Wd. × 7 5/8″ Ht. (unless noted).

Horizontal/vertical manual leveling laser has large leveling knobs and precision vials. Size is 5 1/8″ Lg. × 5 1/8″ Wd. × 6 1/8″ Ht.

Long-Distance Laser Levels

Precision Standard Laser

Never bother with string, transits, or water levels again—these laser levels project an elliptical dot for aligning machines, walls, and beams, as well as for pipe laying and construction applications. Simple to use; just aim the level to project a dot onto a surface up to 500 ft. away (unless noted), and mark the laser dot, which has a bull's eye appearance. Laser is Class IIIA. Levels are made of aircraft-grade aluminum with one recessed, 5-minute accuracy level vial (except 21475A63, which has one 45 minute accuracy vial). Use indoors. Batteries are included.

Standard lasers have 670 nm wavelength; ***bright lasers*** have 635 nm wavelength—20 times brighter than standard lasers for improved outdoor viewing.

General Purpose and ***Commercial Laser Levels***—Project a 3/8″ Ht. × 3/4″ Wd. elliptical dot at 100 ft.; dot size will increase as distance increases. Operate on two AAA batteries for 12 hours of continuous use.

Precision Laser Levels—In addition to the level vial, they have two 30-min. plumb vials. They project a 1/4″ Ht. × 7/16″ Wd. elliptical dot at 100 ft.; dot size increases as distance increases. Fit tripods with 1/4″-20 connection. For use with tripods with 5/8″-11 connection, you will need the *leveling plate* (21475A54, sold separately below). For 5/8″-11 tripods, see page 2292. Operate on 3-volt lithium batteries for 30 hours of continuous use. All vials are acrylic with yellow fluid.

Laser Level Kits—Include 100-ft. precision laser level, beam splitter, leveling plate, and carrying case.

Accessories—*Beam splitter* splits laser beam into two beams at a 90° angle. *Line generator* converts laser dot into a line. Acts as a chalk line for layouts. Line length varies as the distance and angle from the surface is changed. *Leveling plate* has a 2″ × 4″ mounting base with fine level adjustment and 360° swivel action. Fits tripods with 5/8″-11 connections (see 8973A68 on page 2292). *Transit adapter* has everything the leveling plate has plus horizontal and vertical axes for slope and grade applications.

Magnetic Laser Targets

Make laser aligning even easier with targets. They have bull's-eye centers, graduation marks (mm on left and inches on right), and magnets on the top. Made of plastic.

Color	Overall Size, Ht. × Wd.		Each
Translucent	4″ × 3″	5741T31	$34.00
Red Reflective	4″ × 3″	5741T32	49.40

Compact Laser Levels with Magnetic Base

Three-Beam Level

It's easy to achieve precise leveling with these torpedo-style laser levels. They project a reference laser dot or line and have a magnetic base for hands-free operation. Lasers operate at 650 nm wavelength. They have an aluminum housing and a V-grooved base with four magnets for holding on to ferrous surfaces. Vials are acrylic with yellow fluid. Levels fit a tripod with 1/4″-20 connections (for tripods, see page 2292). All levels include a leveling base and a case.

Single-Beam Level—Has a built-in rotating head that swivels between point, horizontal, and vertical lines. Includes graduated level, plumb, and cross-check vials. Accuracy is ±1/8″ at 50 ft. Max. distance is 100 ft. Laser is Class IIIA. Size is 7 3/8″ Lg. × 2″ Wd. × 1″ Ht. Color is orange. Includes two AA batteries for a minimum of 64 hours of continuous operation.

Three-Beam Level—Projects three 90° beams for simultaneous level, plumb, and square reference points. Has a level vial, a plumb vial, a cross-check vial, and a 45° vial. Accuracy is ±1/8″ at 50 ft. Maximum distance is 200 ft. Laser is Class III. Size is 9 1/2″ Lg. × 1″ Wd. × 2 1/4″ Ht. Color is silver. Includes three AA batteries for 70 hours of continuous operation.

Single-Beam Level	2032A7	Each	$93.65
Three-Beam Level	2032A9	Each	$129.58
Replacement AA Battery	65605T72	Each	$0.68

Level Cases

Protect your levels against damage. These hard-shell cases are high-impact styrene with a snap-lock cap and hanging hook. Inside dimensions are 2 1/2″ Ht. × 1 1/4″ Wd. Interior is not padded. Color is black.

Fits Level Lg.		Each

72″	21375A68	24.31
96″	21375A69	29.51

Levels

Standard Duty Extruded Aluminum

Super Duty Extruded Aluminum

Cast Aluminum

Mahogany

Whatever your needs, we'll keep you level. All have acrylic vials with yellow fluid (unless noted). *Magnetic levels* have magnetic inserts for hands-free work on ferrous metals.

Extruded Aluminum Levels

Standard duty have an I-beam frame, a magnified top-reading window for easy viewing, milled edges for smoothness, plastic end caps for shock absorption, and an anodized finish (unless noted). Size is 2¼″ Ht. x 1″ Wd. (unless noted). 2169A1 also has a 45° vial; one of its level vials is a pitch vial for use in setting a grade or slope.

Dual vial have an I-beam frame with a bright red painted finish for high visibility, plastic end caps (unless noted), and glass dual vials with protective acrylic lenses. Size is 2⅜″ Ht. × 1⅛″ Wd.

Super duty have a box beam frame and offer a high degree of stability and durability. Levels have precision-machined leveling surfaces, shock-protecting rubber end caps, and rubber grip hand holes with bumper edges to protect frame. Vials are machined with permanent interior markings. Size is 2⁵⁄₁₆″ Ht. × 1″ Wd.

Cast Aluminum and Mahogany Levels

Rugged construction and dual vials ensure the accuracy of the levels.

Cast aluminum have one-piece die cast aluminum frame for better strength and stability versus extruded aluminum levels. Plus, they have precision-machined edges that ensure parallel sides and a clear glass cover to protect permanently set vials. Size is 2⅜″ Ht. × 1⅛″ Wd.

Cast aluminum with ruled edge is the same as above, but is graduated in inches to 8ths and in cm to mm and has ground edges and a clear glass cover with rubber mounts to protect vials.

Mahogany are also known as mason's levels. They're permanently reinforced with brass edging. They have shock-absorbing rubber end caps and permanent dual vials with protective glass covers. Good for use around wet cement. Size is 2⁷⁄₁₆″ Ht. × 1³⁄₁₆″ Wd.

✓ Nonmagnified top-reading window and smooth but not milled edges.
● Does not have end caps. ■ Does not have hand holes.
♦ Vials are glass.

Levels with LCD Readout

Level with Dual Vials and LCD

6″ Level with LCD

Easy-to-read LCD immediately shows the angle measurement. Display always reads right-side-up—it flips over when you turn the level upside-down. Display provides accuracy within 0.1° for level and plumb as well as all other angles within a 360° range. It shows angle in degrees, % of slope, and pitch (inches of rise/ft. of run). Levels have an auto shut-off, a hold button that freezes measurement, and an alarm button that signals when level or plumb is reached. Operate on one 9-volt battery (included).

Levels with dual vials and LCD find level and plumb in two ways; use the vial for quick reference or use the display for precision work. They have an aluminum box frame with plastic end caps and acrylic vials with yellow fluid. Size is 2⁵⁄₁₆″ Ht. × 1¹⁄₁₆″ Wd. Color is yellow. Padded vinyl cases sold separately below.

6″ level with LCD has a plastic frame and includes a carrying case. Size is 2¹⁄₁₆″ Ht. × 1⅜″ Wd. Color is black.

Replacement 9-Volt Battery (1/Pkg.) ..... 23325A77 **Per Pkg.** $2.75

Compact Levels

Nonmagnetic Standard Aluminum

10″ Magnetic Heavy Duty Aluminum

Plastic

Also known as torpedo levels, these small levels with tapered ends are perfect for tight places. Plus, they easily slide into your pocket. All have a top-reading level vial, a plumb vial, a 45° vial, and a V-groove edge for working on curved surfaces. Vials are acrylic with yellow fluid (unless noted).

Magnetic levels have a magnetic strip for hands-free leveling on ferrous surfaces except the heavy duty models, which have individual magnets.

Standard Aluminum Levels—Vials are mounted in a white housing for improved visibility. Nonmagnetic is 1¾″ Ht. × ⅝″ Wd. and blue; magnetic is 1⅞″ Ht. × ⅝″ Wd. and gray/red.

Lighted-Vial Aluminum Level—Has vials that light up and automatically turn off—perfect if you use your level in low-light environments. Has shock-resistant rubber end caps and is water-resistant. Size is 1⅞″ Ht. × ¾″ Wd. Operates on two AAA batteries (not included). Color is yellow.

Heavy Duty Aluminum Levels—Have an extra-thick extruded frame with machined ends and oversized vials for easy viewing. Strong rare-earth magnets provide maximum holding power. Size is 1¾″ Ht. × ¾″ Wd. Color is bronze.

Plastic Levels—The economical choice, these levels are made of high-impact plastic. Size is 1¾″ Ht. × ⅝″ Wd. Color is yellow.

High-Visibility Plastic Level—This brightly colored, impact-resistant level is easy to find. Size is 1⅝″ Ht. × ⅝″ Wd. Color is neon orange.

AAA Battery ..... 65605T71 **Each** $0.79

♣ Fluid is blue. Also has a pitch level vial.

Pocket Levels

Standard

Standard—Small but accurate, this plastic level has an acrylic vial with yellow fluid, a magnetic pick-up on one end for retrieving metal parts, and a metal pocket clip. Bottom surface has a V-groove. Level is 5″ Lg. × 1/2″ Wd. × 5/8″ Ht.

2034A15 ..... **Each** $3.27

Magnetic

Magnetic—A magnet holds this tiny anodized aluminum level on any ferrous surface. View the vial from both the top and sides. Vial is acrylic with yellow fluid. Level is 4″ Lg. × 5/8″ Wd. × 5/8″ Ht.

2182A24 ..... **Each** $17.14

Mini-Level with Pipe-End Attachment

Make more accurate pipe bends. Level has a notch and a thumbscrew on the end for easy attachment to conduit or pipe during bending. Also has three magnets for strong holding power on metal surfaces and a V-groove on one edge for working on curved surfaces. Level is aluminum alloy with an anodized finish. Includes a top-reading level and four vials that measure 0°, 30°, 45°, and 90° angles. Vials are acrylic with yellow fluid.

Overall Size, Lg. × Wd. × Ht.		Each
5 1/2″ × 3/4″ × 1 1/2″	**3860A67**	$40.36

Master Precision Levels

Square

Triangular

Horizontal

Cross

Use precision levels to check the accuracy of horizontal and vertical surfaces in quality control, inspection, and tool and die work.

Levels have a smooth side for checking flat surfaces and a notched side for secure seating on cylindrical surfaces (except the cross frame level, which is designed for mounting on machinery—it has two 0.216″ dia. mounting holes with a 1.378″ center-to-center distance).

All are cast iron and have glass vials with clear fluid. They include a wood case except the cross frame level. Levels with insulated handles prevent hand heat transfer that may affect level sensitivity.

Starrett No. 466 Angle Gauge Set

Quickly check angles or use this gauge in place of a protractor.

Gauge is steel and has 18 leaves that fold to a size of 4 3/16″ Lg. × 1 11/16″ Wd. The leaves lock in position with a thumbscrew. Each leaf is marked with the angle size. Gauge measures angles of 1°, 2°, 3°, 4°, 5°, 7°, 8°, 9°, 10°, 12°, 14°, 14 1/2° (half the Acme standard 29°), 15°, 20°, 25°, 30°, 35°, and 45°.

8612A57 ..... **Each** $133.01

Electronic Water Level

Determine level around corners and over long distances. This level lets water seeking its own level do the work. Just fill the attached hose with water and raise the unattached end of the hose in a different area. When the electronic sensor buzzes, the water level in the hose marks the matching level point. Finds a level point up to 100 ft. away (using extra hose sold below). Housing is high-impact polystyrene. Operates on one 9-volt battery (not included).

	Accuracy		Each
Level with 25-ft. Hose	±1/16″	**2223A62**	$35.32
Extra 25-ft. Hose Section		**2223A63**	10.62
9-Volt Battery (1/Pkg.)		**23325A77** **Per Pkg.**	$2.75

Starrett Precision Levels

No. 98 Machinists' Level

199Z Master Precision Level

Sensitive vials make these levels perfect for precision work. All vials are ground glass with clear fluid.

No. 98 Machinists' Levels—Main vial is graduated and adjustable with a rotating cover to protect it. Levels have a cross-check vial except the 4″ size. The 12″ size includes a plumb vial. The 18″ size has a double plumb vial. Sensitivity for all is 0.0047″ to 0.0052″/ft., 80 to 90 sec. except for the 4″ size, which is 0.014″ to 0.016″/ft., 4 to 4 1/2 min. Bases are cast iron with V-groove for seating on round work.

199Z Master Precision Level—Main vial is graduated. An auxiliary vial shows lateral position. Sensitivity is 0.0005″/ft., 10 sec. Base is cast iron alloy. Bearing surface is machined and scraped for smoothness; other surfaces have a black textured finish.

♠ Comes in a wood case.

Dual-Vial Levels

Machined Aluminum

Cast Iron with Plumb

Two vials at right angles allow you to level in two directions simultaneously, making it easier to adjust a surface into a level position.

Plastic—Has plastic vials, yellow fluid, and two 5/32″ dia. mounting holes (fasteners not included). Size is 1 31/32″ Lg. × 1 3/16″ Wd. × 19/32″ Ht. Color is black.

3355A35 ..... **Each** $3.70

Machined Aluminum—Has precision glass vials, clear fluid, and two 1/8″ dia. mounting holes (fasteners not included). Size is 2 1/4″ Lg. × 2″ Wd. × 1/2″ Ht. Color is green.

3355A37 ..... **Each** $70.20

Cast Iron—Has two glass vials with clear fluid and a black textured finish. Each leg is 2 3/4″ Lg. × 5/8″ Wd.

2212A52 ..... **Each** $31.34

Cast Iron with Plumb—Also has a plumb level for checking squareness. Level has a nickel-plated finish and glass vials with clear fluid. One leg is 2″ Lg. × 3/8″ Wd. and the other is 3″ Lg. × 3/8″ Wd.

2212A51 ..... **Each** $44.68

Line Levels

A

B

Attach these 3″ long, lightweight levels to a string for long-distance leveling. Vials are acrylic with yellow fluid.

		Dia.		Each
A	Aluminum with Plastic Hooks	3/8″	**2141A11**	$2.42
B	Plastic with Pocket Clip	3/8″	**2141A12**	2.04

Post Levels

These polystyrene levels have a 90° frame with one plumb vial at the corner and one level vial on each side. Use for leveling posts and corners.

Vials are acrylic with yellow fluid. Surfaces are 3 1/4″ wide on each side. Overall height is 5 1/8″. A rubber strap holds the level in place.

		Each
Corner Level	**2186A17**	$3.83
Corner Level w/Magnetic Edges	**2186A18**	5.03

Bull's-Eye and Tubular Levels and Vials

Choose circular bull's-eye levels for leveling all directions on a horizontal plane; tubular levels for leveling in one direction. Acrylic vials are more durable; glass vials have better resistance to temperature extremes and chemicals.

Bull's-Eye Levels—Fluid is clear.

General Purpose Angle Indicators

A

B

C

D

E

F

G

Read any angle from 0° to 90° in each of four quadrants (two quadrants for Style F). Indicators measure to and are accurate to ±0.5° except Style F, which is accurate to ±1°. On the back, an angle and grade chart converts degrees to pitch per inch and per foot (except Style F). V-grooved edges allow for use on curved surfaces. Vials are acrylic with clear fluid.

(A-E) Standard Angle Indicators—Housing is molded high-impact plastic. Straight edges of Styles A, B, and C are graduated to 16ths. ***Styles A*** and ***B*** have V-grooved bottoms and sides except 20025A34, which has a magnetic strip across the bottom and a V-grooved side edge. ***Style C*** has a magnetic strip on the bottom; side is V-grooved; and back is notched for easy attachment to squares and straight edges. ***Style D*** has a hole at the top to allow for use as a plumb bob. Bottom has a magnetic strip. ***Style E*** has two ⅛″ × ¼″ mounting holes (fasteners included).

(F) Pitch and Angle Indicator—Housing is high-impact plastic. Reads angles from 0° to 90° in two quadrants. Has pitch (inch rise per foot run) scales on opposite two quadrants.

(G) Premium Angle Indicator—Housing is cast aluminum alloy for strength and has a black nonglare finish. Base is precision machined for accuracy. Indicator has a magnetic strip on the bottom; remaining three sides are V-grooved. Has two ⅜″ dia. mounting holes (fasteners not included).

Tilt Indicators

An economical choice for measuring incline or tilt-angle in degrees. These tilt indicators are well-suited for machinery, boats, cranes, and medical devices. Metal ball in level tube indicates the angle.

Housing is black ABS plastic with white lettering. Adhesive backing makes mounting easy. Indicators have 1° graduations except 20035A34, A21, A36, A23, and A27 which have 5° graduations and A35 which has 0.5° graduations.

20035A21

20035A28

Range	Accuracy	Overall Size, Ht. × Wd. × Thick.		Each

Dual-Axis Tilt Indicators

Indicators determine side-to-side tilt and front-to-back tilt. Choose an indicator with a 25° or a 45° side-to-side tilt. Both indicators tilt 40° front-to-back. Perfect for use with machinery, cranes, and medical equipment. Repeatability is ±0.1°; resolution is 0.1°; front-to-back accuracy is ±3° .

Housing is black ABS plastic with white lettering. A metal ball indicates angle for side-to-side and a white point for front-to-back. Include mounting bracket and stainless steel fasteners.

Side-to-Side Range	Side-to-Side Accuracy	Overall Size, Ht. × Wd. × Thick.		Each
0°-25°	±1.5°	1½″ × 5¾″ × 2¼″	3799A31	$39.53
0°-45°	±1.8°	2½″ × 5″ × 2¼″	3799A34	37.91

Magnetic Base Angle Finders/ Center Locators

Find the center of square and round stock and determine setup angles on milling machines, shapers, and grinders. The 90° V-base has powerful Alnico magnets to attach to ferrous surfaces. Center-finder punch-point accurately finds and marks the center of workpieces. Protractor is set in a cast aluminum housing and has a calibrated dial indicator. Measure in 10° increments; accuracy is ±0.5°. Overall size is 5¼″ Ht. × 5″ Wd. × 1″ Dp. Dial is 2″ dia.

Calibration		Each
0°-90°-0° Dial	2194A17	$213.27

360° with Clockwise Dial	2194A19	213.27
Replacement Plastic Dial Cover	2194A21	13.51
Optional Metal Case	2194A22	29.57

Magnetic-Mount Angle Indicators

Easy to use—just set the rotating dial to the desired angle, then turn the unit until it reads level. Use to set, transfer, and check angles from 0° to 360°. Vials are acrylic with yellow fluid. Magnetic base allows hands-free use on ferrous surfaces.

Economy Angle Indicator—Dial has four quadrants that are graduated from 0° to 90° with 5° increments. Includes one level vial. Housing is lightweight plastic. Accuracy is ±1°. Size is 2¾″ Lg. × ¾″ Wd. × 3″ Ht. Dial is 2″ dia.

Economy Angle Indicator

Heavy Duty Angle Indicator—Rotating dial has two 90° quadrants, graduated to 2½°. Conversion chart shows degrees and rise per foot and per meter. Base has V-groove for working on rounded surfaces. Includes one level vial. Frame is cast aluminum. Accurate to ±2½°. Size is 9″ Lg. × ⅞″ Wd. × 2″ Ht.

Heavy Duty Angle Indicator

		Each
Economy Angle Indicator	2150A25	$8.50
Heavy Duty Angle Indicator	2145A11	74.32
Replacement Vial for Heavy Duty Indicator	2195A11	31.43

Mini Digital Angle Indicator

Only 2″ square and 1 5/16″ thick, this compact tool provides digital angle readings with a 180° range. Magnets allow you to mount on saw blades and machine guides for hands-free use. It measures in 0.1° increments with ±0.1° accuracy and repeatability. Indicator has an aluminum housing and an auto shut-off. Operates on one 3-volt lithium battery (included).

Angle Indicator	3353A77	Each	$45.76
Replacement Battery	7701K34	Each	$1.92

Electronic Protractor/Level/Inclinometers

Angle, level, and tilt instantly appear on the liquid crystal display. Plus, you can set zero from any position with the 360° range. Numbers invert when tools are upside down so you can always read display. Tools have a machined aluminum frame, V-groove base for use on curved surfaces, and two tapped 6-32 holes for mounting (fasteners not included). Readout is between –90° and +90°. Accuracy is ±0.2°. Operate on one 9-volt battery (included). Overall size is 6 1/64″ Lg. × 1 7/32″ Wd. × 1 29/32″ Ht. Plastic case included.

21465A82 also has an RS-232 compatible serial port for ASCII output. *Connecting cable and foot switch for* 21465A82 is for use with a PC.

Range	Measuring Increments	Accuracy		Each
0-360° (90° × 4)	0.1°	±0.1° (0-10°)	21465A81	$205.77

Magnetic Laser Pulley Alignment Tool

Align pulleys, gears, sprockets, and just about anything ferrous with this aluminum magnetic laser alignment tool. It works with pulleys that have 3″ to 6 ft. diameters and 3″ to 20 ft. spacings. Place the adjustable magnetic targets onto the edge of one pulley and attach the laser line emitter on the edge of the other pulley. The laser light intersects the three targets to visually show any misalignment. Laser is Class II, 635 nm wavelength, accurate to ±0.07°, and 1/16″ wide at 30″ with a 70° spread. Tool includes two belt-tension testers for capacities of 30 to 300 lbs., three adjustable targets, laser line emitter, and plastic carrying case with foam inserts. Operates on two AAA batteries (included).

Alignment Tool	2309A46	Each	$924.07
Repl. AAA Battery	65605T71	Each	$0.79

Angle Sensors with Remote Display

Measure angles from a distance—this sensor measures angular positions of machine tool tables, cutting tool tables, and cranes and can be used to determine accurate positioning of satellite and microwave antennas. Mount sensor four ft. from readout; mount up to 200 ft. away with a longer cable (sold separately).

Accuracy from 0° to 10° is ±0.1°; from 10° to maximum range is ±1% of angle. Housing is plastic with an LCD that displays to 0.1° or 0.01° (see table). Display size is 5 1/64″ Lg. × 3 15/32″ Ht. × 1 17/64″ Dp. Include a 2 19/32″ Ht. × 1 13/64″ Dp. electronic sensor and a 4-ft. cable. Operate on one 9-volt battery (not included).

Also Available: Other cable lengths. Please ask for 21955A21 and specify length: 10, 20, 30, 40, 50, 100, 150, or 200 ft.

Digital Protractor/Angle Finders

Large digital displays let you easily read angle calculations and a hold button freezes display. Both include an on/off switch with auto shut-off.

(A) Digital Protractor/Angle Finder— This aluminum tool has front and back digital displays, as well as plumb and level vials. Also has a memory that stores angle measurements and a cut calculator that helps to determine exact angles. Ideal for miter and bevel angles. Includes low power indicator, four AA batteries, nylon case and leg extension. Vials are acrylic with yellow fluid. Closed size is 17″ Lg. × 1 3/8″ Wd. × 2 3/8″ Ht.

(B) Digital Protractor/Angle Finder with Laser— A laser extends the working distance 100 ft. beyond the length of the tool. Plus, this aluminum and steel tool has two digital displays; one shows the angle of the base and the other shows the angle of the moveable arm. Numbers invert when unit is upside down so you can always read the display. Ideal for beams, rafters, and slopes. Arm locks in all positions, and magnets allow for hands-free operation. Fits tripods with a 1/4″-20 connection (see page 2292 for tripods). Operates on three AAA batteries (included). Laser is Class III, 650 nm wavelength, and for indoor and outdoor use; visibility will decrease in brightly lit areas. Closed size is 20 7/8″ Lg. × 1 1/4″ Wd. × 2 1/2″ Ht.

	Range	Measuring Increments	Digital Display Accuracy	Vial Accuracy		Each
A	0-220°	0.1°	±0.1°	±0.05°	8521A31	$242.25
B	0-180°	0.1°	±0.1°	—	8521A46	246.46

Replacement AAA Battery					65605T71	.79

Granite Surface Plates

Two Ledges

Granite construction means these plates are noncorrosive and nonmagnetic, resist warping and abrasion, and are easy to clean. They provide an accurate reference plane for inspection work and layout and have a nonglare black finish. Choose plates with ledges to hold fixtures and instruments in place with clamps. Plates meet or exceed Fed. Spec. GGG-P-463C and ISO 10012. Include a certificate of accuracy traceable to NIST (National Institute of Standards and Technology).

Laboratory grade AA is for precise operations in constant-temperature-gauging rooms and metrology departments. ***Inspection grade A*** is for general quality control work. ***Toolroom grade B*** is for checking work throughout a shop.

Surface plate covers keep harmful abrasives from damaging flatness and finish. Made of heavy duty vinyl with a soft cloth lining. ***Surface plate stands*** are angle iron with a 36″ overall working height. Stands *with casters and 3″ dia wheels* have hard rubber wheels. Stands *with casters and 4″ dia. wheels* have phenolic wheels. Stands *without casters* have leveling screws on the bottom of each leg. **To Order:** Please specify stand for a plate with no ledges or for a plate with two ledges. ***Surface plate cleaner*** removes particles from your plate.

Also Available: Other sizes. Please ask for 2245A999 and specify grade, length, width, thickness, and the number of ledges (0 or 2).

Cast Iron Surface Plates

With a high-precision surface, these plates are great for tool making, layout, and inspecting parts. Plus, heavy deep-rib construction and 3-point bearing pads maintain the plate's surface accuracy even when it's supported by an uneven surface. Include a wooden cover and two handles.

Lg. × Wd. × Ht.	Top Thick.	Wt., lbs.	Surface Accuracy		Each

Dual-Sided Cast Iron Surface Plates

Get two precision surfaces—these plates have one on the top and one on the bottom. Surface accuracy is within 0.0005″. Lapped and grooved sides have 1/16″ Wd. × 1/16″ Dp. grooves spaced 1/2″ apart. Grooves collect compounds, grit, and oil. Plates are 14″ Lg. × 10″ Wd. × 2 3/8″ Ht. and weigh 50 lbs.

		Each
2 Smooth Sides	2224A1	$354.47
2 Lapped and Grooved Sides	2224A3	391.21
1 Smooth and 1 Lapped and Grooved Side	2224A2	365.39

Parallel Straightedges

Use these straightedges to set up and level machinery and equipment, to check the flatness of surfaces, and for use in scribing and positioning work above and parallel to a surface. Made of stress-relieved cast iron for maximum stability. Top and bottom faces are precision ground parallel and straight to within 0.0001″ per 12″.

Lg. × Wd. × Ht.	Wt., lbs.		Each
24″ × 1″ × 2″	8	2213A1	$581.58

72″ × 2″ × 4″	110	2213A5	1,805.92

Parallels

Excellent for inspection and layout on surface plates and for setups on drill presses and milling and grinding machines. Parallels are made of hardened and ground tool steel.

9 Pair Set

Parallels Ground on Two Sides

Perfect when your job requires only two parallel sides. Parallels are 6″ Lg. × 1/4″ Wd. and have a height tolerance of ±0.001″. Total parallel tolerance over entire length is ±0.0001″, and total size tolerance between a matched pair is ±0.0001″. Sets include 6″ Lg. × 1/4″ Wd. matched pairs in 1/16″ height increments and a wood case.

Pairs Per Set	Ht. Range		Each
9	3/8″-7/8″	8642A67	$432.28
9	15/16″-1 7/16″	8642A68	433.33
22	1/2″-1 13/16″	8642A61	1,103.45

Matched Pairs—Available 3/8″ to 2″ high in 1/16″ increments. **To Order:** Please specify exact height.

8642A3 ..... **Per Pair** $49.22

Parallels Ground on Four Sides

Use these parallels when more than two parallel sides are needed. Pairs are precision ground parallel and straight within 0.0002″.

Lg. × Wd. × Ht.	Wd. and Ht. Tolerance	Square Tolerance		Per Pair
6″ × 1/4″ × 1/2″	0.0002″	0.0005″	2259A12	$95.01
6″ × 1/4″ × 3/4″	0.0002″	0.0005″	2259A14	95.01

24″ × 1″ × 2″	±0.0003″	0.0004″	2259A45	1,176.28

1-2-3 Blocks

Use for surface plate setups, layout, and inspection jobs. The 11- and 23-hole blocks have drilled, counterbored, and tapped holes for easy mounting. All blocks are sold as matched pairs.

Made of hardened alloy steel and precision ground to the following tolerances: squareness is 0.0001″ per inch; parallel accuracy is 0.0001″ to 0.0003″ for 8630A76 and A74 and ±0.0002″ for A75.

1-Hole Block

23-Hole Block

	Block Size Lg.	Wd.	Ht.	Hole Size		Per Pair
1-hole Blocks	3″	2″	1″	1/2″	8630A75	$117.46
11-hole Blocks	3″	2″	1″	5/16″-18	8630A76	132.28
23-hole Blocks	3″	2″	1″	3/8″-16	8630A74	120.88

Sine Plates

Built to exacting specifications, these hardened steel plates hold work for inspection and grinding. (*Note:* Do not use for milling and drilling machine processes.) Use with surface plates and height gauges to measure and duplicate angles. They have a locking strap that stays below the top surface and rolls for stability.

Nonmagnetic sine plates have tapped holes and two self-storing rails.

Magnetic sine plate contains ceramic magnets for superior holding power. Removable handle turns magnets on and off. Plate does not have tapped holes. Comes with two rails.

Nonmagnetic Sine Plate

Lg. × Wd. × Ht.	Center Distance	Tapped Hole Size	Square and Parallel Tolerance		Each
Nonmagnetic Sine Plates					
4″ × 4″ × 2″	3″	1/4″-20	0.0002″	5216A21	$451.12
6″ × 6″ × 2″	5″	1/4″-20	0.0002″	5216A24	657.51

Magnetic Sine Plate					
6″ × 6″ × 4 1/4″	5″	—	0.0002″	5216A31	1,428.32

Parallels for Narrow Applications

10-Pair 1/8″ Thick Set

Get the job done with these thin hardened-steel parallels. They're great for layout on surface plates and for setups on drill presses and milling and grinding machines. Parallel within 0.0008″ and each pair is matched in height to ±0.001″. Parallels are 6″ Lg. × 1/8″ Thick. Heights are 1/2″, 5/8″, 3/4″, 7/8″, 1″, 1 1/8″, 1 1/4″, 1 3/8″, 1 1/2″, and 1 5/8″. Set comes in a plastic case.

86425A65 ..... **Each** $160.38

20-Pair 1/32″ Thick Set

Use this thin spring steel parallel set for machining applications with small, narrow components. Parallel within 0.0001″ and each pair is matched in height to ±0.001″. Parallels are 6″ Lg. × 1/32″ Thick. Set includes 20 pairs of 1/2″-1 11/16″ high parallels in 1/16″ increments in a plastic case.

8644A7 ..... **Each** $196.88

Starrett No. 154 Adjustable Parallels

No need for dozens of parallels, these adjust to the exact size you need. Use them for leveling work when setting up milling and grinding machines, planers, and drill presses.

To measure the size of an opening, insert a parallel, adjust it to fit, then hold it in place with the included screw. Measure the parallel with a micrometer to find the opening size. Parallels are cast iron and 9/32″ thick. Parallel tolerance is ±0.005″ for 1 3/4″ and 2 1/8″ lengths; ±0.007″ for 2 11/16″ and 3 9/16″ lengths; and ±0.009″ for 4 3/16″ and 5 1/16″ lengths.

Inch Range	Metric Range	Length	Starrett Number		Each

Set of Six (3/8″-1/2″ to 1 3/4″-2 1/4″)			S154LZ	2211A22	230.00

Angle Plates

Ground finish plates are often used in layout and inspection work and are manufactured to a tighter tolerance than ***machine finish*** plates.

(1) Cast Iron Universal Right Angle Plates

Clamp work to either face for measuring and machining; rotate through three planes without reclamping. Include a single web that adds strength and gives you more finished faces. ***Machine Finish—*** Faces and ends are square and parallel within 0.002″ per 6″. ***Ground Finish—*** Faces and ends are square within 0.0005″ per 6″ and parallel within 0.00025″ per 6″.

Size (A)	Size (B)	Size (C)	Wt., lbs.	Machine Finish	Machine Finish Each	Ground Finish	Ground Finish Each
4″	5″	3¾″	10	23535A65	$83.57	2244A65	$222.86

♦ Plate has 11 slots.

Precision V-Blocks

Support layout, machining, grinding, and inspection work with these precision-ground steel blocks.

Alloy Steel V-Blocks with Clamp— Have a reversible swing-away clamp and an offset hole pattern in the top of the V-block (unless noted) to allow a wide variety of clamping positions. Side slots permit easy clamping to almost any work surface. The V is 90°, square with sides, and parallel to the base within 0.0002″. Two screws for clamp included. *Hardened and ground V-blocks* are extremely durable. Rockwell hardness is C58-C60. *Ground V-blocks* are an economical alternative.

Plain Steel V-Blocks— Create custom setups. Blocks do not have drilled or tapped holes and don't include clamps or screws. The V is 90°, square with sides, and parallel to the base within 0.0002″.

Also Available: Matched pairs. Please ask for 2361A888 and specify V-block part number.

★ Outside dimensions of individual blocks may vary slightly. ♣ Hole pattern is not offset.

Starrett V-Blocks and Clamps

Designed for toolroom and layout applications, these precision-ground V-blocks hold work securely for drilling, grinding, and milling operations. V is 90° and parallel to the base within 0.0002″, and square within 0.0003″. Tapped holes permit mounting on plates and angle irons. All blocks are hardened steel and sold in matched pairs.

Starrett No. 568C V-Blocks and Clamps— Hold 2″ dia. round and 1 7/16″ square work. Clamps mount in a low or high position on the block for small or large work. Clamps do not project beyond the size of the block, allowing block to be used on its base, ends, or sides. Blocks have a 3/8″-16 tapped hole through the sides. Size is 2½″ Lg.×3″ Wd.×2″ Ht.

Starrett No. 278 V-Blocks and Clamps— Hold up to 1″ dia. round workpieces. Blocks have a 1/4″-20 tapped hole through the sides. Size is 1⅝″ Lg.×1¼″ Wd.×1¼″ Ht.

	Per Pair		Repl. Clamp Each
Starrett No. 568C V-Blocks and Clamps	2203A11	$422.00	2203A21 $26.50
Starrett No. 278 V-Blocks and Clamps	2221A11	250.00	2221A21 19.01

Magnetic V-Block

The capability of a V-block with the power of a magnet. A simple turn of a lever switches the magnetic force in the 90° V and the faces on and off. The base is magnetic, so the block is ideal for flat ferrous surfaces.

V-block holds 3/16″ to 2¾″ round and square work with a holding force of 180 lbs. V is square with the sides and parallel to the base. Faces and V are ground within 0.0004″. Size is 4″ Lg.×3″ Wd.×3¾″ Ht.

2202A3 ..... Each $153.79

Cast Iron V-Blocks

Support shafts and cylinders. Blocks are cast iron.

Standard V-Blocks— Base, sides, and V have a machine finish. The V is 90°, square with sides, and parallel to the base within 0.0015″, unless noted. Pairs are matched. Can be used for machining and inspection.

Precision V-Blocks— Base, sides, and V have a precision-ground finish. The V is 90°, square with sides, and parallel to the base within 0.0005″. Can be used for inspection.

Max. Dia. of Work	Size (A)	(B)	(C)		Per Pair

Economy Aluminum V-Block

Get back to the basics with this economical V-block. It easily centers round material for drilling, cutting, and sawing. Lower a drill bit into the V-block's 7/16″ wide bottom groove to align holder on drill presses.

V-block is aluminum and can be held down by hand or bolted down with the four 11/16″ Lg.×3/8″ Wd. slots (fasteners not included). V is 118° for large and small diameter workpieces. Size is 5″ Lg.×4″ Wd.×1¾″ Ht.

20065A8 ..... **Each** $17.78

Miniature Steel V-Block Set

Use as a universal holding tool for miniature and intricate parts for fixturing on comparators, inspection setups, and grinding fixtures. Set has bridges for straddling long workpieces. Capacity for round and square parts is 1/32″ to 9/32″. Blocks are precision ground and made from hardened steel. V is central, square with sides, and parallel to the base within 0.0002″. Includes two mini V-blocks (capacities for round and square parts are 1/32″-5/32″ and 3/64″-9/32″), two clamps, two bridges, and five prisms with 3/16″, 5/32″, 1/8″ capacities. Comes in a plastic case.

20115A41 ..... **Each** $115.50

Shaft Alignment Kits

Misalignment and vibration can cause shaft and coupling failure, but these simple kits let you quickly check for angular and offset shaft misalignment. Come in a plastic carrying case.

Stylus Indicators

Use stylus movement to check for misalignment. Kits include two sets of mounting brackets with adjustment knobs and styli.

For Shaft Size	Stylus Lg.	Kits	Each	Repl. Styli	Per Pair
7/16″-3″	4¼″	6468K24	$182.78	6468K34	$23.50
7/16″-8″	6½″	6468K25	207.84	6468K35	29.38

Stylus Indicator

Dial Indicator

Dial Indicators

Also known as rim/face method, these easy-to-read dial indicator kits offer greater precision when checking for misalignment. Kits include steel mounting tubes (see table), software for alignment calculation, and two each of the following: alignment frames, dial indicators, and indicator mount rods with swivel joints. 61035K29 includes two 20″ lengths of roller chain. 61035K49 includes two 12″ lengths and two 18″ lengths of roller chain; user can connect one 12″ chain to each 18″ chain for a total length of 30 inches.

For Shaft Size	Steel Mounting Tubes, No. of Tubes and (Lg.)		Each
¾″-3¾″	2 (5″), 2 (7″), 2 (9″)	61035K29	$883.33
¾″-7¾″	2 (5″), 1 (7″), 1 (9″), 1 (12″), 2 (15″)	61035K49	1,077.92

Static Balancing Ways

Evaluate balance without time-consuming set up, leveling, or centering. These ways accurately balance, straighten, and align armatures, flywheels, propellers, grinding wheels, and other rotating parts. Easy to use—just place the part to be tested on the discs; they freely rotate on sensitive ball bearings. Discs are hardened and ground steel.

Super-Sensitive Bench Style— Have a knife-edge and lightened cut-out discs for extreme precision. Balancing ways can detect out-of-balance as small as five grains in a 3″ radius on a 1½-lb. workpiece. (1 grain = 0.002286 oz.).

Pillow-Block Style— Excellent for use with unusual widths and lengths. Ways can be set apart at any distance and attached to any solid sub-base. Come as a set of two pieces.

Also Available: Replacement discs. Please ask for 20075A888 and specify static balancing way part number.

Binoculars

Focus Free— Your subject comes into clear view without any focusing. An extra-wide field of view makes it easy to track fast-moving objects. Binoculars have 7X (700%) magnification and 35 mm lenses that cover a 578-ft. wide field at 1,000 yards. A lens coating neutralizes reflection. Retractable rubber eyecups make viewing easy for eyeglass wearers. Size is 5″ Lg.×7⅛″ Wd.×2¼″ Ht. Weight is 22.5 oz. Include a soft padded case with carrying strap.

Night Vision— See in complete darkness at distances up to 600 feet. Great for security and navigation at night. They have 2.5X (250%) magnification, a built-in illuminator, and 42 mm lenses that cover a 94-ft. wide field at 100 yards. Uses two AA batteries (sold separately). Size is 6½″ Lg.×6 19/64″ Wd.×3″ Ht. Weight is 1.75 lbs. Include carrying case and strap.

Focus Free

Night Vision

Focus-Free Binoculars	6590T11	Each	$59.08
Night Vision Binoculars	14175T9	Each	$543.44
AA Batteries (4/pkg.)	71455K53	Per Pkg.	$2.94

Compact One-Handed Telescope

Quickly and easily view far off items while keeping one hand free—a unique slide mechanism allows one-finger focusing. Lens has 6X (600%) magnification with an 8° field of view and a working distance of 3¼ ft. and beyond. Telescope is completely rubber coated for durability and has a vinyl carrying case. Size is 3¼″ Lg.×1½″ Wd.×1″ Ht.

3118T38 ..... **Each** $147.90

About Magnification

Magnification— Refers to how much larger an object appears when viewed through a magnifying lens. It is expressed by a number followed by an X or a %. For example, an object viewed through a 1.75X lens is magnified to 175% of its original size.

Working Distance— The distance from the magnifying lens to the point where the viewed object is in the best possible focus.

Lens— *Glass* is best used where heat or chemicals might damage an acrylic lens. *Acrylic* is lighter than glass, a factor to consider when buying hand-held magnifiers.

Illuminated Magnifiers

Shine a light on your magnification work. Illuminated magnifiers have either a fluorescent, halogen, or incandescent light source. *Fluorescent* operates cooler than the other two and produces an even, white light. *Halogen* produces a brighter light than the others, but generates more heat. *Incandescent* is for general lighting applications. All magnifiers have a glass lens and a steel spring arm, and include a light bulb (unless noted). Operate on 120 VAC, 60 Hz (unless otherwise stated); UL listed.

Fluorescent Magnifiers

(A) Economy— Cool, even light at an economical price. Shade is aluminum. Base clamps to surfaces up to 2¼″ thick. Include a 5-ft. cord with two-prong plug. Operate on 110 VAC, 60 Hz.

(B) Standard— Have feather-touch control for easy positioning and a stamped steel shade with a plastic shield to protect the bulb. Include a 5-ft. cord with three-prong plug. Operate on 115 VAC, 60 Hz. *Clamp base* attaches to surfaces up to 2¼″ thick. *Weighted base* is 10½″ dia.

(C) Steady Arm— Not even vibrating machinery will make this magnifier lose its place. Arm has steel ball-joints that lock into position with wing nuts. Shade is die cast zinc with a handle for easy positioning and a plastic shield to protect the bulb. Dual clamp base prevents magnifier from twisting off the mounting edge and attaches to surfaces up to 2″ thick. Base has mounting holes for vertical and horizontal mounting (bolts included). Includes a 9-ft. cord with three-prong plug. *Add-on 3X (300%) lens* increases the magnification to 3.75X (375%) with a 3¾″ working distance. Add-on lens screws onto magnifier.

Halogen Magnifiers

(D) Standard— Lens is set in a thermoplastic shade. Magnifiers have an on/off switch and a 700-watt, three-prong outlet in the base. Include a 9-ft. cord with three-prong plug. *Clamp base* attaches to surfaces up to 2¾″ thick. *Weighted base* is 10½″ dia. *Add-on 1.75X (175%) lens* increases magnification to 2.5X (250%) with an 8″ working distance; *add-on 3.5X (350%) lens* increases magnification to 4.25X (425%) with a 2½″ working distance. Add-on lenses screw onto magnifier.

Incandescent Magnifier

(E) Standard— Uses a 60-watt incandescent bulb (sold separately). It has a thermoplastic shade and clamp base that attaches to surfaces up to 2″ thick. Includes a 5-ft. cord with two-prong plug.

Specialty Fluorescent Illuminated Magnifiers

Weighted Base

Screw Base

Weighted Base

Weighted Base

Weighted Base

Add light to any magnification job. Illuminated magnifiers have either one or two low-heat fluorescent bulbs (included) that produce an even, white light. All have a glass lens and a steel spring arm. Operate on 120 VAC, 60 Hz; UL listed.

(A) Floating-Arm ESD-Safe— A counterbalanced arm positions effortlessly with a touch and won't drift. Plus, it's safe for use in areas where electrostatic discharge (ESD) is a problem. Shade is die cast zinc with a handle and a plastic shield to protect the bulb. Include an 8-ft. cord with three-prong plug. *5X (500%) magnifier* meets MIL-STD-2000. *Clamp base* attaches to surfaces up to 2¾″ thick. *Weighted base* is 9¾″ Lg.×7″ Wd. *Add-on 3X (300%) lens* increases magnification to 3.75X (375%) with a 3¾″ working distance; for 1.75X models only. Add-on lens is held in place with included metal clips.

(B) Highlighting— Cast light at an angle, making textures and surface irregularities more visible. Have an ABS plastic shade and a 10-ft. cord with three-prong plug. *Clamp base* attaches to surfaces up to 2″ thick. *Weighted base* is 9¾″ Lg.×7″ Wd. *Add-on 3X (300%) lens* increases magnification to 3.75X (375%) with a 3¾″ working distance; for 1.75X models only. Add-on lens is held in place with included metal clips.

(C) Distortion-Free— Get a distortion-free viewing area. *Clamp and screw base* have an aluminum shade and a 6-ft. cord with three-prong plug. *Clamp base* attaches to surfaces up to 2 9/16″ thick. *Weighted base* has a polycarbonate shade and a 9-ft. cord with three-prong plug. Base is 10½″ dia.

(D) Wide Angle— Have a 6¾″ Wd.×4½″ Ht. rectangular lens for a large, distortion-free magnification area. Two independently controlled bulbs cast even, shadow-free light when both are lit and highlight surface irregularities when only one bulb is lit. Magnifiers have an ABS plastic shade and a 6-ft. cord with three-prong plug. *Anti-reflective lens* minimizes glare and reflection from overhead lighting. Coating meets MIL-STD C-675C for abrasion resistance. Safe for use in areas where electrostatic discharge (ESD) is a problem. *Clamp base* attaches to surfaces up to 2¾″ thick. *Weighted base* is 9″ dia. *Add-on 3.5X (350%) swing-away lens* increases magnification to 4.375X (437.5%) with a 3″ working distance.

(E) Dimmable-Light Wide Angle— These magnifiers dim intensity from 100% to 25% for an improved view of reflective surfaces and provide our largest distortion-free magnification area. They have a cast aluminum shade, a cast iron base, a 3.5X (350%) swing-away lens that increases magnification to 4.25X (425%), and a 6-ft. cord with three-prong plug. C-UL listed. *Clamp base* attaches to surfaces up to 2 9/16″ thick. *Weighted base* is 12″ Lg.×11″ Wd.

For Floating-Arm ESD-Safe Magnifiers and Highlighting Magnifiers with 1.75X (175%) Lenses Only

Add-On 3X (300%) Lens **1462T122** $35.06

For Wide-Angle Magnifiers Only (Not for Dimmable-Light Wide-Angle Magnifiers)

Add-On 3.5X (350%) Swing-Away Lens **1080T18** $96.74

★ Includes two 3″ dia. lenses. ● Available in black only. ♠ Color is black.

Combination Halogen Magnifier/Lamp

Get the ultimate in flexibility for demanding inspection jobs—a 50-watt halogen lamp for bright, crisp light and a 5″ diameter glass lens are mounted on separate flexible steel gooseneck arms for use together or alone. Shade is steel. The weighted base is 7″ Lg.×4¼″ Wd. and has a 9-ft. cord with three-prong plug. Bulb is included. Color is black. Operate on 120 VAC, 50/60 Hz. UL listed.

Add-on 2X (200%) lens increases magnification to 2.75X (275%) with a 5½″ working distance; *add-on 3X (300%)* lens provides 3.75X (375%) magnification with a 3½″ working distance. Add-on lenses screw onto magnifier.

Magnification	Arm Reach	Working Distance		
1.75X (175%)	22″	13″	**10605T44**	$144.23
Accessories and Replacement Parts				
Add-On 2X (200%) Lens			**10605T441**	29.12
Add-On 3X (300%) Lens			**10605T581**	37.44
Replacement 1.75X (175%) Lens			**1035T55**	14.00
Replacement 50-Watt Halogen Bulb			**1997K25**	7.50

For information about magnification, see page 2304.

Incandescent Stand Magnifier

A 0.75-watt bulb illuminates your work while the plastic stand holds the lens in place above the surface. Simply tilt the lens to bring objects into focus. The magnifier detaches from the base for hand-held use. Lens is acrylic. Stand is 5¾″ wide at base. Magnifier includes a 4X (400%) bifocal lens insert and a bulb. Operates on two AA batteries (not included, sold separately below).

Magnification	Lens Dia.	Working Distance		Each
2X (200%)	4¼″	6″	2122T41	$17.50
Replacement Bulb (10/Pkg.)			1505K34	Pkg. $5.23
AA Batteries (4/Pkg.)			71455K53	Pkg. $2.94

Hand-Held Extension Magnifiers

Flex-Shaft

Telescoping

Slip into tight, out-of-reach locations to read part numbers, serial numbers, and other fine print. A ball-joint style connection allows magnifiers to swivel to almost any position. All have a shatter-resistant acrylic lens.

Flex-Shaft—Has a plastic-coated flexible-steel shaft that bends and holds its shape until bent again. Remove the center core and shaft remains flexible to be "snaked" into position. Flexible shaft length is 14¼″; overall length is 23½″. Lens frame measures 2½″ Lg.×1¾″ Wd.

Telescoping—Has a stainless steel telescoping handle with a cushion grip. Handle extends from 6⅞″ to 36⅛″. When retracted the overall length is 9½″. Lens frame is 2⅜″ dia.

	Magnification	Lens Dia.	Working Distance		
Flex-Shaft	2X (200%)	1½″	2″	1099T16	$20.99
Telescoping	2.5X (250%)	2″	4″	1330T4	10.91

Multi-Adjustable Dual Lens Magnifiers

Shown with Two Optional Gooseneck Lamps

Back and forth, up and down, left and right—magnifiers adjust to your needs. Plus, they have two acrylic lenses to instantly double your viewing power. Frame base is 1″ square steel tubing and measures 15″ Ht.×12″ Wd.×12″ Dp. Inner working area is 10″ Lg.×10½″ Wd. Color is black.

Optional halogen gooseneck lamp is useful in low-light areas (maximum two lamps per magnifier). Light has a 16″ flexible arm and an on/off switch. Includes a 20-watt MR-16 halogen bulb and a 9-ft. cord with three-prong plug. Operates on 115 VAC, 60 Hz.

Total Magnification	Each Lens Magnification	Lens Size, Lg.×Wd.	Working Distance		
5X (500%)	2.5X (250%)	6″×8″	10″	1101T51	$401.64
6X (600%)	3X (300%)	6″×6″	10″	1101T52	341.32
Optional Halogen Gooseneck Lamp				1101T53	126.00

Gooseneck Magnifiers

Magnetic Base

With a flexible steel neck these magnifiers bend to any position and stay in place. Color is black.

Magnetic-Base Magnifiers—Have a 3⅜″ dia. magnetic base that attaches to any flat, metal surface and a glass lens.

Weighted-Base Magnifier—Easily disassembles for storage and portability. Has a 6″ Lg.×6½″ Wd. weighted base and an acrylic lens.

Magnification	Arm Reach	Lens Dia.	Working Distance		
Magnetic-Base Magnifiers					
2.25X (225%)	9″	4″	8″	2106T11	$57.05

Round Magnifiers

Nonilluminated

Illuminated

LED Illuminated

Magnifiers have plastic handles and frames and acrylic lenses. Color is black (unless noted).

Nonilluminated—The 2X (200%) and 2.5X (250%) lenses have a bifocal lens insert.

Illuminated—Light the magnified area. All have a bifocal lens insert. 8564T12 uses four AA batteries (included). 2154T11 uses two C batteries (included).

LED-Illuminated—Has 12 high-powered LED bulbs for bright, even light and distortion-free viewing over the entire magnified area. LEDs also have long bulb life—50,000 hours. Magnifier uses three AA batteries (not included; sold separately below). Includes a wrist strap.

★ First figure refers to magnifier lens; second to bifocal lens insert. ♣ Frame is gray and black.

Rectangular Magnifiers

B
Illuminated Magnifier

All magnifiers feature a 2″ Lg.×4″ Wd. lens with a bifocal lens insert. Handles and frames are plastic; lenses are acrylic. Color is black.

(A) Nonilluminated Magnifier—Ideal for use in bright environments. Overall length is 8¼″.

(B) Illuminated Magnifier—Has an overall length of 8¼″. Uses two AA batteries (included).

(C) Folded Illuminated Magnifier—Swing handle open to use and fold it shut to store. Overall length is 7″. Closed size is 3″ Lg.×4⅞″ Wd. Uses two AAA batteries (included).

	Magnification★	Working Distance★		
A	2X (200%), 6X (600%)	2″, 1¾″	2143T31	$15.99
B	3X (300%), 5X (500%)	11¼″, 1¼″	10155T64	22.31

Replacement Battery for 11645T65			14715T101	.79

★ First figure refers to magnifier lens; second to bifocal lens inset.

Magnifier Bench Set

Get more options with a set of four magnifiers stored in a white plastic bench-top stand. Handles and frames are plastic; lenses are acrylic. Color is black. Set includes one each of the following:

2″ Lg.×4″ Wd. Rectangle Lens Magnifier—Magnification is 2X (200%) with a 9″ working distance.

2½″ Diameter Round Lens Magnifier—Magnification is 3X (300%) with a 6″ working distance.

3¼″ Diameter Round Lens Magnifier—Magnification is 2X (200%) with an 8″ working distance.

4″ Diameter Round Lens Magnifier—Magnification is 2X (200%) with a 9″ working distance.

2131T41 ..... **Set** $57.78

For information about magnification, see page 2304.

Compact Illuminated Magnifiers

Small but powerful, these magnifiers light your work for an even better view. They have an acrylic lens set in an impact-resistant plastic housing. Include two AAA batteries.

Mini Magnifiers— Our smallest illuminated magnifiers come in a plastic pouch. Bulbs are not replaceable.

Standard Magnifiers— Have a locking light switch and an integral handle. 8485T14 has a wide-angle lens for a wider view.

Magnification	Lens Size, Lg.×Wd.	Working Distance	Overall Size, Lg.×Wd.		Each
Mini Magnifiers					
5X (500%)	1″ Dia.	2 3/16″	2″ ×2″	**8536T14**	$11.40

● Has an 8X (800%) bifocal lens insert with a 1 1/4″ working distance.

Measuring Magnifiers

Use these pocket-size magnifiers alone to magnify, or with scales to magnify *and* measure. Precision-ground glass lenses provide distortion-free images and are adjustable for clear focus. Choose from standard and illuminated models with a triple- or double-lens system.

Triple-Lens Measuring Magnifiers

Also known as Hastings Triplet magnifiers, these have three separate lenses bonded together for sharp images. The next step up in image quality is a microscope. Magnifiers are 2″ high. Measuring scales are not included. General purpose, protractor, inch, and metric scales are sold separately below.

Illuminated magnifier has a 5 3/4″ long handle and uses two AA batteries (not included; sold separately below).

Magnification	Lens Dia.	Working Distance	***Standard***		***Illuminated***	
7X (700%)	0.780″	1.5″	**1502T2**	$63.45	———	———
10X (1,000%)	0.622″	1″	**1502T3**	68.63	**1060T22**	$70.96
AA Battery					**14715T102**	$0.68

General Purpose Scale— Measures any radius from 1/16″ to 3/8″; angles up to 90° in 1° increments; lengths up to 3/4″ in 0.005″ increments; lengths up to 20 mm in 0.1 mm increments; and line widths of 0.001″, 0.002″, and 0.003″.
1502T4 ..... $37.20

Protractor Scale— Measures angles up to 360° in 1° increments.
1502T7 ..... $37.20

Inch Scale— Measures lengths up to 3/4″ in 0.005″ increments.
1502T5 ..... $37.20

Metric Scale— Measures lengths up to 20 mm in 0.1 mm increments.
1502T6 ..... $37.20

Double-Lens Measuring Magnifiers

Two lenses provide distortion-free viewing. Magnifiers are 2 5/16″ high and include a general purpose scale. Scale measures circles from 0.002″ to 0.0625″; radii from 1/16″ to 3/8″; angles from 0° to 90° in 5° increments; and lengths from 0.016″ to 0.250″. Also has a millimeter scale 10 mm long with 1 mm divisions and an inch scale 0.500″ long with 0.005″ divisions. An American Thread Accuracy Scale is sold separately below.

Illuminated magnifier has a 4 1/2″ long handle and runs on two C batteries (not included; sold separately below).

Magnification	Lens Dia.	Working Distance	***Standard***		***Illuminated***	
7X (700%)	1″	1″	**1755T17**	$83.96	**1755T11**	$98.05
C Battery					**14715T103**	$1.50
Replacement General Purpose Scale					**1755T22**	$16.92

American Thread Accuracy Scale— Measures the following threads per inch: 50, 32, 28, 24, 20, 18, 16, 14, and 8.
1755T23 ..... $16.92

Flashlight-Style Illuminated Magnifiers

A flip of the on/off switch provides illuminated magnification in perfect focus. See also 6545T41 (magnifier attachment) and 6545T4 (mini light) on page 733.

A Wide-Lens Illuminated Magnifier— Has an extra-large acrylic aspheric lens (flat on the object side, curved on the viewing side) to ensure edge-to-edge clarity. Lens resists scratches and dust. Magnifier has a plastic housing and uses two C batteries (not included; sold separately below).

Magnification	Lens Dia.	Working Distance	Overall Lg.		
4X (400%)	2.75″	2.5″	10″	**1466T1**	$88.36
C Battery				**14715T103**	1.50

B Grooved-Lens Illuminated Magnifier— Also called a Coddington magnifier, it has a grooved lens circumference for extra sharp, crisp images. Magnifier has an impact-resistant plastic head with a chrome-plated copper handle and a glass lens. Uses two AA batteries (not included; sold separately below).

Magnification	Lens Dia.	Working Distance	Overall Lg.		
10X (1,000%)	0.780″	1″	5 3/4″	**1504T14**	$34.44
AA Battery				**14715T102**	.68

C Illuminated Magnifiers with Scale— Eyepiece has both 1/32″ and 0.5 mm scales on two sides. Magnifiers have an impact-resistant plastic head, a glass lens, and a black plastic handle. Use two C batteries (not included; sold separately below).

Magnification	Lens Dia.	Working Distance	Overall Lg.		
5X (500%)	2″	2″	8 1/4″	**6559T11**	$37.64
10X (1,000%)	1.2″	1″	7″	**6559T12**	30.47
C Battery				**14715T103**	1.50

D Illuminated Magnifier with Precision Scale— Detachable scale has 1/2 mm and 1/64″ graduations. Magnifier has an acrylic aspheric lens (flat on the object side, curved on the viewing side) to ensure edge-to-edge clarity. Lens resists scratches and dust. Magnifier has a plastic housing and uses two C batteries (not included; sold separately below).

Magnification	Lens Dia.	Working Distance	Overall Lg.		
10X (1,000%)	1.38″	1.0″	8 1/2″	**1147T52**	$79.66
C Battery				**14715T103**	1.50

Compact Fold-Out Magnifiers

Triple Lens

Precision glass lenses with high magnification provide sharp color and detailed imaging. These compact magnifiers fit easily in your pocket and have a fold-out nickel-plated case.

Triple-Lens Magnifiers— Also called Hastings Triplet magnifiers, these have three lenses bonded together for sharp images without distortion.

Single-Lens Magnifiers— Also called Coddington magnifiers, these have a single lens with a grooved circumference for excellent image resolution; exceeded only by the triple lens.

Magnification	Working Distance	***Triple Lens*** Lens Dia.			***Single Lens*** Lens Dia.		
7X (700%)	1 1/2″	0.780″	**1501T1**	$47.64	———	———	———
10X (1,000%)	1″	0.622″	**1501T2**	49.76	0.780″	**1501T6**	$31.07
14X (1,400%)	3/4″	0.492″	**1501T3**	56.77	0.622″	**1501T7**	33.98
20X (2,000%)	1/2″	0.327″	**1501T4**	58.14	0.492″	**1501T8**	37.03

For information about magnification, see page 2304.

Pocket Magnifiers with Attached Case

Rectangular Case

Oval Case One Lens

Oval Case Three Lenses

Dual-purpose plastic cases protect these compact magnifiers when not in use and serve as handles when they are. Color is black (unless noted).

Rectangular case magnifiers have an acrylic lens and a slide-out case.

Oval case magnifiers have either a single lens or multiple lenses that can be used alone or together for maximum magnification. Lenses are glass (unless noted) and swing out of case.

Magnification	Lens Dia.	Working Distance	No. of Lenses		
Rectangular Case					
3X (300%)	1.38″	3½″	1	**2152T1**★	$10.23

20X (2,000%) ♦	0.80″	½″	3	**1503T6**	30.17

★ Color is gray. ♠ Has an acrylic lens.
♦ Maximum magnification when lenses are used together.

Fixed-Focus Stand Magnifiers

A built-in stand keeps the lens at optimal distance for focused, hands-free magnification. Also called linen testers, these magnifiers are perfect for quality control and thread counting in fabric inspection.

Plastic Stand—Has an acrylic lens and a 1″ scale with 1/16″ graduations and 1 mm graduations. Color is black.

Aluminum Stands—They're black-coated anodized aluminum with a glass lens. Include a vinyl pouch. 1493T26 has a 1″ scale with ⅛″ and 1 mm graduations. 1493T27 has a ½″ scale with ⅛″ graduations.

Magnification	Lens Dia.	Working Distance	Overall Size, Lg.×Wd.×Ht.

Watchmakers' Loupes

8539T65 *8539T35*

Bring fine, detailed work into focus. Loupes have a glass lens mounted in a black plastic body and can be used with the optional adjustable elastic headband.

The ***triple-lens*** loupe has three separate lenses bonded together, known as a Hastings Triplet lens, for extra-sharp images without distortion.

Magnification	Lens Dia.	Working Distance		
Single Lens				
4X (400%)	1″	2½″	**8539T65**	$14.00
5X (500%)	1″	2″	**8539T64**	14.00
7X (700%)	1″	1½″	**8539T34**	14.00
10X (1,000%)	1″	1″	**8539T63**	16.58
Triple Lens				
10X (1,000%)	0.62″	1″	**8539T35**	51.95
Optional Elastic Headband			**8539T5**	10.32

Adjustable-Magnification Loupe

Zoom in on the magnification you need. Loupe adjusts to magnify at 8X (800%), 10X (1,000%), 12X (1,200%), 14X (1,400%), and 16X (1,600%). Simply twist to adjust and focus. It has scales that are 16 mm long in 0.1 mm increments and 0.6″ long in 0.005″ increments. Lens is glass and ⅜″ dia. Body is black metal and plastic. Includes a vinyl case.

13765T21 ..... $368.18

Double-Lens Magnifier

Two glass lenses provide a wide, flat viewing field. A flat lens on the outside of both lenses and convex lenses on the inside of the magnifier give distortion-free magnification. Plus, the plastic body fits comfortably between your thumb and index finger. Color is black.

Magnification	Lens Dia.	Working Distance		
3.5X (350%)	1.625″	3″	**1494T1**	$43.53

Headband Flip-Up Magnifiers

Standard and Economy

With Light

Antistatic

Read fine print and inspect precision parts with these lightweight magnifiers that can be worn over prescription and safety glasses. Lenses pivot up and out of the way when not needed. Magnifiers include a headband and a lens. All except antistatic models also include a visor, which blocks any unnecessary light.

Standard

Have a 1½″ Lg.×4″ Wd. glass lens and an adjustable headband with felt padding. Color is gray.

Replacement lenses, sold separately, are easily interchangeable, making it possible to change the level of magnification. The auxiliary eye loupe attaches for an additional 2.5X (250%) magnification.

Magnification	Working Distance	*Magnifiers*		*Repl. Lens*

With Light

An 8,000-candlepower xenon light allows for even better viewing. Magnifiers have a 1⅛″ Lg.×3⅛″ Wd. acrylic lens and an adjustable padded headband. Color is tan. Light uses two AA batteries (included).

Magnification	Working Distance	*Magnifiers*		*Repl. Lens*	
1.75X (175%)	14″	**1500T2**	$72.20	**1500T12**	$10.00
2.25X (225%)	8″	**1500T4**	72.20	**1500T14**	10.00
2.75X (275%)	6″	**1500T5**	72.20	**1500T15**	10.00
Replacement Xenon Bulb				**65135T65**	$5.47
Replacement AA Battery				**14715T102**	.68

Antistatic

A specially-constructed frame eliminates static electricity build-up, making magnifiers ideal for sensitive electronic and clean room environments. Open-design cushioned headband fits all head sizes. Lens is 1 3/16″ Lg.×3 5/16″ Wd. and acrylic. Color is black.

Magnification	Working Distance	*Magnifiers*		*Repl. Lens*	
1.6X (160%)	12″-14″	**1485T11**	$29.81	**1485T21**	$9.58

2.75X (275%)	4″- 7″	**1485T14**	33.65	**1485T24**	13.42

For information about magnification, see page 2304.

Eyeglass Loupes

Note: Eyeglass Frames not Included.

An adjustable metal (unless noted) clip fits and attaches to all eyeglass frames. Flip loupes out of the way when you don't need them. Loupes have a 0.94″ dia. glass lens (unless noted).

Magnification♣	Working Distance♣	No. of Lenses		
3X (300%)	3½″	1	1340T1●	$29.00
4X (400%)	2½″	1	1340T9	36.81
7X (700%)	1½″	1	1340T5	39.24
4X (400%), 7X (700%)	2½″, 1½″	2	1340T6	46.99

♣ Second figure refers to the combination of both lenses.
● Clip is plastic. Lens is acrylic.

Handy Sheet and Page Magnifiers

Flexible ultra-thin plastic magnifying sheets for reading books, newspapers, maps, and blueprints. Magnifiers include a protective vinyl case, unless noted. 6796T15 has a vinyl border around lens.

6796T12

	Magnification	Working Distance	Lens Size, Lg.×Wd.

▲ Does not include a case. ★ Nonbendable; thickness is ⅛″.

Bar Magnifier with Ruler

Read across an entire line of text without eyestrain—the semicircular surface doubles the height of type with 2X (200%) magnification. Simply slide the flat surface of the 8″ Lg.×1″ Wd. lens down the page for easy reading. Ruled markings are shown in inches and sixteenths up to 8″ on one edge, and in centimeters and millimeters up to 200 mm on the other edge. Handle length is 2″. Overall length is 10″.

6786T1 ..... $6.82

Microscope Illuminators

Fluorescent

Maximize your microscope's power with illuminators that provide 360° of uniform shadow-free light. Ideal for inspecting multicolored objects. They're adapted to fit microscopes by American Optical, Bausch and Lomb, Nikon, Olympus, Unitron, Wild, Zeiss, and others. Color is white.

Fluorescent—Made of molded plastic and 6.77″ long with a 3.84″ OD ring. Approximate bulb life is 7,000 hours. Include a 7½-ft. cord with two-prong plug. Operate on 120 VAC, 60 Hz.

LED—Made of ESD-safe plastic and 5.5″ long with a 3.5″ OD ring. Approximate bulb life is 50,000 hours. Has 9 LEDs for variable light from 25% to 100%. Includes a 6-ft. cord with three-prong plug. Operates on 100-240 VAC, 50/60 Hz.

22×40×0.15	89	1149T13	5.99

Eyeglass Magnifiers

Ideal for users with or without eyeglasses. The 1⅛″ Lg.×3⅛″ Wd. acrylic lens can be flipped up and out of the way when not in use.

Clip-On—Perfect for eyeglass wearers. Wire clips can be bent to fit any size or shape eyeglass frames (even frames with bifocals) for instant magnified viewing with both eyes. Eyeglasses not included.

Eyeglass Frame—Eyeglass-style frame is perfect for those who don't wear glasses, but still want lightweight, hands-free magnification. Frames weigh only 1.2 oz. and are ABS plastic for extra durability. Can also use over eyeglasses. Include a case.

Magnification	Working Distance	Clip-On		Eyeglass Frame	
1.5X (150%)	20″	6771T36	$22.62	—	—

3.5X (350%)	4″	6771T24	24.87	1344T24	34.10

Adjustable-Focus Eyeglass Magnifiers

Adjust the focus for multiple working distances. Each lens has a dial for individual focusing. Glasses have plastic lenses and frames with a molded nose bridge. Include a hard shell case.

Detail Glasses—Have 2X (200%) magnification and allow for a working distance up to 16″. Ideal for close-up work.

Long-Range Glasses—Have 2.1X (210%) magnification and a working distance of 10 ft. and longer. Use for far distances.

Detail Glasses	3102T45	$94.10
Long-Range Glasses	3102T41	85.30

Stereo Microscope

A stereo microscope gives you an unreversed image and good depth of field, which are essential for precision inspection and assembly. This scope has rack-and-pinion focus with a viewing angle of 45°, a 360° rotatable head, and 10X (1,000%) and 30X (3,000%) magnification settings. Working distance is 4.3″. Viewing field is 0.728″ dia. at 10X; 0.255″ dia. at 30X. Microscope includes two built-in illuminators with an electronic dimmer. Illuminators run at 110 VAC, 60 Hz. Includes 6-ft. cord with three-prong plug.

Microscope	11705T96	$391.30
Repl. Upper Bulb	11705T94	13.00
Repl. Lower Bulb	11705T95	10.11

Adjustable-Arm Stereo Microscopes

Single-Arm Variable Magnification

An adjustable arm provides maximum flexibility and comfort, while the extra-heavy base adds stability. All microscopes have individually adjustable eyepieces and a fluorescent ring light for extra-bright illumination. Viewing angle is 45°. Head rotates 360°. Lights operate on 120 VAC, 60 Hz.

Single-Arm Microscopes—*Dual magnification* has 10X (1,000%) and 20X (2,000%) settings; working distance is 4.13″. Viewing field is 0.8″ dia. at 10X; 0.4″ dia. at 20X. *Variable magnification* has adjustable magnification from 6.5X (650%) to 45X (4,500%); working distance is 3.7″. Viewing field is 1.2″ dia. at 6.5X; 0.18″ dia. at 45X. Include an 8-ft. cord with two-prong plug.

Dual-Arm Microscopes—Provide extra stability and easily slide across your specimen. *Dual magnification* has 10X (1,000%) and 20X (2,000%) settings; working distance is 4.45″. Viewing field is 0.91″ dia. at 10X; 0.45″ dia. at 20X. *Variable magnification* has adjustable magnification from 6.7X (670%) to 50X (5,000%); working distance is 4.25″. Viewing field is 1.35″ dia. at 6.7X; 0.18″ dia. at 50X. Include a 7-ft. cord with three-prong plug.

	Single Arm		Dual Arm	
Dual Magnification	10705T63	$1,187.10	10705T41	$1,469.23
Variable Magnification	10705T64	1,628.55	10705T42	1,969.23

For information about magnification, see page 2304.

Stereo Zoom Microscopes

Microscope

Microscope with Digital Imaging

Just zoom in on your subject—you'll get a crisp clear image over the entire zoom range. Perfect for precision inspection and assembly. Viewing angle is 45°.

Microscope— Has a wide magnification range of 7X (700%) to 180X (18,000%) and a 360° rotating head. Includes 10X (1,000%) and 20X (2,000%) eyepieces and a 2X (200%) objective lens for greater range. Working distance is 3.54″. Viewing field is 1.24″ dia. at 10X; 0.618″ dia. at 20X.

Microscope with Digital Imaging— Has a camera that plugs into a USB 2.0 port to capture images, annotate the images, and perform basic measurements. Magnification range is 2.25X (225%) to 50X (5,000%). Includes 10X (1,000%) eyepieces. Working distance is 4¼″. Viewing field is 1.35″ dia. at 6.7X; 0.14″ at 50X. Microscope includes a built-in fluorescent ring light. Operates on 110 VAC, 50/60 Hz. Includes a 6-ft. cord with three-prong plug.

Fiber-optic light source offers quartz-halogen "cold" light to keep heat from your subject (bulb included) when used with the light guide and ring illuminator sold separately below. Runs at 115 VAC, 60 Hz. Includes 6-ft. cord with three-prong plug.

Fiber-optic split light guide plugs into the fiber-optic light source. Features two 23″ flexible arms with 0.460″ fiber-optic light tips. Arms can be bent to any position. Requires an adapter ring (sold separately below).

Fiber-optic ring illuminator plugs into the fiber-optic light source. It fits over the 2X objective lenses for "cold" shadow-free light. Requires an adapter ring (sold separately below).

Machinists' Pocket Microscopes

25X Magnification Scope with Scale

40X Magnification Scope with Scale

Always be prepared to make on-the-job "spec" checks with microscopes small enough to carry in your pocket. They come with a light and have beveled openings (unless noted) to gather and focus light, providing a distortion-free inverted image.

Scopes without Scale— Scopes are 5″ high with a ¼″ OD eyepiece. They come in a vinyl sleeve. Body is aluminum. Require three coin cell batteries (included).

Scopes with Scale— Have an internal scale pattern for measurement and a precision ground three-lens system. *25X magnification* scope is 5″ high with a ¼″ OD eyepiece. Comes in a vinyl sleeve. Body is aluminum. *40X magnification* scope light turns on once scope is pulled open. Scope is 5½″ high with a ¼″ OD eyepiece. Body is black plastic. Requires two AA batteries (not included).

Magnification	Viewing Field	Scale		
Scopes without Scale				
25X	3.3 mm	—	**1452T51**	$22.79

Replacement Coin Cell Battery for 1452T51, T54, and T52			**7604K67**	1.19
AA Battery for 1452T53			**14715T102**	.68

★ Opening is not beveled.

Hand-Held Digital Microscope

Weighing less than 1 lb., this portable digital microscope provides detailed examination of any object you choose. Capture magnified images as pictures or movies; resolution is 1.3 megapixels. Microscope has a compact lens with magnification that can be set from 10X (1,000%) to 200X (20,000%). Focus distance is 150 mm at 10X. Includes a measurement function and built-in LED lights that adjust for brightness.

Microscope requires a PC with Windows XP SP2 or Vista, a USB port, and a CD-ROM drive. Install the included software on your PC, and connect the microscope to your PC's USB port via the attached 4′10″ long cable. Operates on 5 VDC drawn from your PC. Comes with an adjustable microscope stand.

Microscope (4.25″ Lg. × 1.25″ Dia.) **1058T23** $227.27

Illuminated Compact Microscope

You never need to be without a microscope when your scope fits in your pocket. It zooms from 60X (6,000%) to 100X (10,000%) and includes a built-in adjustable light source. Microscope has an ABS plastic housing, an adjustable focus control knob, and uses two AA batteries (included). Overall size with included snap-on microscope slide holder is 6½″ Ht. × 2″ Wd. × 3″ Dp.; size without holder is 5½″ Ht. × ⅞″ Wd. × 1½″ Dp.

	Viewing Field		
Microscope	0.5″ dia.	**1483T4**	$42.78
Replacement AA Battery		**14715T102**	.68

Shop Microscopes

Make precise, direct readings with microscopes that feature a graduated depth-focus ring and an internal scale. Just turn the eyepiece adjuster to focus—vertical adjustment sharpens the image.

Scopes have a cut-out portion at the side of the base for the use of instruments. Include an adjustable swivel-point mounted penlight and two AA batteries.

Base is 2½″ dia. Overall height is 7½″. Viewing field is 0.094″ dia. at 60X; 0.057″ dia. at 100X.

Magnification	Scale	Graduations		
60X (6,000%)	0.001″-0.080″	0.001″	**2158T12**	$431.26
100X (10,000%)	0.0005″-0.050″	0.0005″	**2158T13**	431.26
Replacement AA Battery			**14715T102**	.68

Digital Microscope/Camera

Get high-definition, high-resolution digital pictures of magnified images. Great for quality control, medical, forensic, and forestry work. Camera has a magnification range from 10X (1,000%) to 40X (4,000%). It also has a 2 megapixel resolution, a 2″ LCD preview screen with a 2X (200%) digital zoom, 2 GB memory, and built-in adjustable LED lights to brighten the image. Images are created in JPEG format. Includes a case, a lithium ion rechargeable battery, viewing software on CD-ROM, and a USB cable. Size is ½″ Ht. × 2 3/16″ Wd. × 1″ Dp. Weight is 4 oz.

3077T65 ..... $402.35

Digital Camera

Take pictures and easily transfer them to the Web. Camera has 14 megapixel resolution and creates JPEG images and Motion JPEG (AVI) movies. It also includes a 2.7″ LCD monitor, center-point autofocus, direct camera-to-printer capability, 5X optical zoom, 6.7X digital zoom, and a metal and silver plastic housing. Requires a memory card (sold separately below). Camera also comes with a USB cable, viewing software on CD-ROM, and a hand strap. Operates on a rechargeable lithium battery (included). Size is 2.2″ Ht. × 3.7″ Wd. × 0.9″ Dp. Weight is 4 oz.

Digital Camera	**1041T87**	$135.20
4 GB Memory Card	**1041T89**	19.50

Surface-Finish Scales

Both scales have 22 individual scales from 2 to 500 microinches: 2, 4, and 8 μ″ Ra (lapped); 8, 16, 32, and 63 μ″ Ra (ground); 16 and 32 μ″ Ra (blanchard ground); 32, 63, 125, 250, and 500 μ″ Ra (shape turned); 63, 125, 250, and 500 μ″ Ra (profiled); and 63, 125, 250, and 500 μ″ Ra (milled).

Scales are 2″ Lg.×5⅜″ Wd. and electroformed solid nickel. They come with a leather case and engineering data.

Scale without Calibration Certificate	8555T12	$62.71
Scale with Calibration Certificate	8555T16	306.00

Economy Surface-Finish Scale

Get highly accurate surface comparisons at an economical price. Scale has 18 surfaces marked in AA and Ra from 16 to 500 microinches: 16, 32, 63, 125, and 250 μ″ (ground); 63, 125, 250, and 500 μ″ (end milled); 63, 125, 250, and 500 μ″ (milled); 63, 125, 250, and 500 μ″ (shape turned); and 500 μ″ (flame cut). Scale is 5″ Lg.×3½″ Wd. and high-impact ABS plastic. Comes with a plastic case.

1005T2 ..... $9.18

Master Set of Surface-Finish Scales

Comprehensive set contains 30 scales from 2 to 500 microinches: 2, 4, and 8 μ″ AA (lapped); 16, 32, and 63 μ″ AA (reamed); 2, 4, 8, 16, 32, and 63 μ″ AA (ground); 16, 32, 63, 125, 250, and 500 μ″ AA (horizontal milled); 16, 32, 63, 125, 250, and 500 μ″ AA (vertical milled); and 16, 32, 63, 125, 250, and 500 μ″ AA (turned).

Scale set is 3″ Lg.×6″ Wd. and is made from electroformed solid nickel. Standards are marked in AA and Ra. Set includes instructions and a graph that correlates CLA, AA, and Ra values plus ISO "N" scale. Manufactured to ANSI B46.1 standards.

85615T1 ..... $105.54

Hardness Calibration Test Blocks

Make sure your hardness testers are accurately calibrated. Blocks are marked with Rockwell hardness scale. They have a serial number and a certificate of calibration. All meet ASTM E18 requirements. *C Scale blocks* are traceable to NIST.

To Order: Please specify a hardness within the ranges listed. *Note:* Test blocks are supplied to within ±5 points of the hardness ordered.

	Hardness Range	Overall Size Ht.	Wd.	Thick.		
A Scale	30- 55	2″	2″	0.250″	12105T54	$58.33
A Scale	60- 80	1.5″	2.5″	0.250″	12105T54	58.33
B Scale	30-100	2″	2″	0.250″	12105T55♦	66.67
C Scale	20- 63	1.5″	2.5″	0.250″	12105T53	58.33
E Scale	75-100	2″	2″	0.250″	12105T56	66.67

♦100 hardness block is 1.5″ Ht.×2.5″ Wd.×0.250″ Thick.

Hardness-Testing Files

Set

An easy and economical way to determine the hardness of steel materials. Files are steel with a curved tip. Handles are marked with Rockwell hardness values.

Set—Includes six files that cover the Rockwell C scale from 40 to 65 in increments of five, a chart to convert Rockwell C to Vickers scales, and a vinyl case.

13705T91 ..... $94.29

Individual Files—**To Order:** Please specify Rockwell C: 40, 45, 50, 55, 60, or 65.

13705T38 ..... $23.39

Metal/Alloy Identification Kit

Quickly identify common alloys with nondestructive testing. Kit electrically removes a 0.00004″ thickness of metal from the test alloy for testing. Then you add test solution to the paper for a distinct color reaction. Kit includes metal-testing solutions, alloy ID charts, metal standards, filter paper, an electro-deposit apparatus with battery, and a plastic case.

Identifies the following stainless steels: 303, 304, 316, 416, 431 (420 and 440), and 17-4; and the following corrosion-resistant alloys: Monel, copper-nickel, Inconel, and other nickel alloys.

1385T91 ..... $583.82

Electronic Surface-Roughness Tester

Quick, easy-to-read testing almost anywhere. Tester has a compact detector attached to a display unit with a large LCD. It also has an upper and lower control limit for go/no-go readings and auto display shut-off. Tester can take 1,000 measurements and save 10 in memory. Detector unit detaches for use in tight spaces. Probe tip radius is 0.0002″. Measuring ranges: 14,170 μ″, 4,000 μ″, 1,000 μ″, and automatic. Measures Mr1, Mr2, RPc, S, RSm, R3z, Ra, Rp, Rq, Rt, Ry, and Rz roughness parameters. Measurement speed: 0.01″/sec. (0.25 mm/sec.).

Tester has an SPC data output and can be connected to a Mitutoyo miniprocessor using an SPC data output cable (sold separately below); it also has an RS-232C connector for a direct connection to a PC. Operates on a rechargeable battery or on 120 VAC, 60 Hz with included AC adapter that has a 5-ft. cord with two-prong plug. Also includes connecting cable, roughness sample (use as a standard for calibration), operation manual, and a plastic case. Detector unit is 4 17/32″ Lg.×29/32″ Wd.×1 1/64″ Ht.; weight is 0.4 lb. Display unit is 6 55/64″ Lg.×2 19/32″ Wd.×2 3/64″ Ht.; weight is 0.68 lb. Meets ANSI, VDA, ISO, and JIS (old and new) standards.

Tester	1181T14	$2,234.53
Adapter Mount for Vertical Use	1181T15	40.33
Detector Probe 2″ Extension Rod	1181T16	155.93
Detector Support Feet w/ Height Adjustment	1181T41	126.08
Height Gauge Adapter—¼″×½″ Mount	1181T42	92.11
Small Hole Detector—0.097″ Dia. Tip	1181T17	597.74
SPC Data Output Cable (40″)	20395A66	43.90

Portable Dial Hardness Tester

Test parts that are inaccessible to bench-type hardness testers. Tester is compact and lightweight so you can easily carry it to the test material. It measures Rockwell A-, B-, C-, D-, E-, F-, G-, H-, and K-scale hardness for all metals. Scale range is 0-100 with one-point dial increments. Tester measures hardness of inside and outside surfaces and can be used at any angle without affecting accuracy; accuracy is ±1.5 points.

Made and calibrated to ASTM E110 standards. Includes a flat anvil, a V-anvil, a convex anvil, a 1/16″ ball indenter, a B-scale hardness standard, operating instructions, and a vinyl-covered steel case. Maximum vertical height is 4½″. Throat depth is 2¼″. Size is 11″ Ht.×8″ Wd.×1½″ Dp. Weight is 3.6 lbs.

Tester	14065T9	$2,187.50
Optional C-Scale Diamond Indenter	14065T5	364.58

Pressure-Grip Hardness Testers

Operate testers with one hand—simply squeeze handles until penetrator contacts test material; a reading appears on the dial indicator. Accuracy is ±1 point. For use with materials up to ¼″ thick. Testers include an extra penetrator, a test strip, an adjusting spring wrench, a conversion chart, a plastic case, and instructions. Overall size is 8″ Lg.×1″ Wd.×3″ Ht.

Rockwell B scale tester tests brass, mild steel, and aluminum alloys in the Rockwell B scale with a range of 20 to 100. Tester has graduations from 1 to 20, where 1 equals B20 and 20 equals B100. Also tests annealed to full-hard brass. ***Rockwell E scale tester*** tests aluminum alloys in the Rockwell E scale with a range of 25 to 110. Tester has graduations from 1 to 20, where 1 equals E25 and 20 equals E110.

Rockwell B Scale Tester	8731T12	$1,089.06
Rockwell E Scale Tester	8731T11	1,089.06
Repl. Penetrator Tip for Rockwell B Scale Tester	8731T47	81.36
Repl. Penetrator Tip for Rockwell E Scale Tester	8731T46	81.36

Microscopic Hardness Tester

A microscope measures the indentation diameter made by a 1/16″ tungsten-carbide ball penetrator providing hardness readings for steel alloys and other metals in ranges from 20 to 65 on the Rockwell C scale. The microscope has a calibrated scale and is directly read on the Rockwell C scale. Accuracy is ±1.5 points.

Includes a hand-held impact indenter with a ball penetrator; an illuminated, fixed-focus 60X (6,000%) microscope with a ⅞″ eyepiece; a test block; a conversion chart; two AAA batteries; a plastic case; and instructions. Microscope is ⅞″ Dia.×7½″ Ht.

Tester	1342T13	$720.34

Repl. AAA Battery	14715T101	.79

Brinell Hardness Tester Kit

Take on-the-spot Brinell hardness measurements in the field, plant, or lab. To use, slide a test bar that most matches the material you're testing into the tester. Place the tester on the surface of the material and hit the tester's rubber striking surface with a hammer; a steel ball will make an impression. Measure the impression and use the computing disc to determine hardness.

Kit includes test instrument, 10X (100%) microscope, computing disc, record sheets, three extra impression balls, an assortment of five test bars for testing steel within 150-400 BHN (Brinell Hardness Number), a pen light with batteries, and a vinyl-covered steel case.

Also Available: Test bars for testing aluminum. Please ask for 1347T999 and specify BHN from 57 to 107.

Tester Kit ..... **1347T41** ... $1,315.46

Extra Test Bars■ **1347T2** 1-5 $38.45 6-Up $35.25

■ **To Order:** Specify BHN from 106 to 578.

Durometer Hardness Testers

Standard Dial

Slimline Dial

Pen-Style Dial

Digital

Pocket Style

Measure the hardness of flat materials.

A scale is for natural, soft vulcanized, and synthetic rubbers; neoprene; butyl; silicone; leather; and felt.

D scale is for plastic, acrylic, polystyrene, vinyl, high-pressure laminate, hard rubber, phenolic molded parts, epoxies, and soft metals such as lead. Not for aluminum or steel.

O scale is for soft printing rollers, textile windings, and similar materials.

OO scale is for gels, sponges, and microcellular foam.

Note: For more information on durometer scales, see page 3526.

Dial Durometer Hardness Testers

Have a dial with a range of 0-100 in one-point increments for quick reads. Minimum testing thickness is 1/4″. Accuracy is ±1 point except for 1388T232 and T238, which are ±2 points. Testers include a metal case and meet or exceed requirements of ASTM D-2240.

Standard and ***slimline*** have a magnetic clutch with a pointer (unless noted) that "freezes" on the highest durometer reading and include a test block. Testers can be hand held or mounted to a stand with an included 8-32 threaded knob. *Standard* are 4″ Ht.×2 1/4″ Wd.×1 3/4″ Dp.; base is 1 5/8″ Wd.×1″ Dp. *Slimline* are 4″ Ht.×2 1/4″ Wd.×1 3/4″ Dp.; base is 1″ Wd.×1″ Dp. for better access to confined areas. ***Pen style*** include a certificate of calibration traceable to NIST (National Institute of Standards and Technology) and are 6 1/8″ Ht.×2 1/4″ Wd.

Scale	*Standard*		*Slimline*		*Pen Style*	
A	**1388T2**	$507.49	**1388T213**	$507.49	**1388T235**	$399.33
D	**1388T1**	507.49	**1388T113**	507.49	**1388T236**	399.33
O	———	———	**1388T231**	566.41	**1388T237**	465.89
OO	———	———	**1388T232**●	574.04	**1388T238**	465.89

● Does not come with a pointer that "freezes" on highest reading.

Digital Durometer Hardness Testers

Eliminate reading errors with a large easy-to-read LCD. Testers have a hold function that keeps the maximum reading on screen, high and low buttons for setting acceptable tolerance limits, a face that rotates 270° for taking readings in difficult positions, an automatic shut-off, and an RS-232 port for connection to computer serial ports. Scale range is 0-100 in 0.1 increments. Accuracy is ±1 point. Testers come with two 3-volt lithium batteries, an AC adapter that runs on 120 VAC, 60 Hz for continuous use, and a metal case. Size is 6 1/8″ Ht.×2 1/4″ Wd.×1 1/2″ Dp. All meet ASTM D-2240 standards.

Repl. 3V Battery	**7701K58**	4.17

Pocket-Style Durometer Hardness Testers

Compact testers fit in your pocket and operate in any position. Plus, they have no gears, cams, or levers that can wear out or break—just apply pressure to the spring-loaded penetrator and take a reading. Vernier scale has a range of 5-100 in five-point increments. Accuracy is ±1 point. Testers are 1/2″ Dia.×4 1/2″ Lg. and include a leather pocket sheath.

Scale			Scale		
A	**11545T21**	$246.15	D	**11545T22**	$246.15

Type A Durometer Hardness Test Kit

Perfect as a reference check for durometer hardness testers and to establish a feel for using a durometer gauge. Kit includes seven color-coded test blocks that cover the Durometer A scale from 30 to 90 in increments of ten. Each block is rubber and measures 2″ Ht.×2″ Wd.×1/4″ Dp. Includes a 2.6″ Ht.×5.5″ Wd.×4.7″ Dp. vinyl-covered steel case.

1011T11 ..... $246.03

Coating-Thickness Gauges

Mechanical, Magnetic Pull-Off

Mechanical, Pen Style

Digital, Standard

Digital, Universal

Mechanical Coating-Thickness Gauges

For nondestructive measuring of nonmagnetic coatings such as paint, plastic, galvanizing, plating, and enamel on steel as well as cast iron. All include a certificate of calibration traceable to NIST (National Institute of Standards and Technology), except 14055T11.

Magnetic Pull-Off Gauges—Calibrated gauges with a wear-resistant carbide probe for long life and accuracy. Visual and audible indicators tell you when thickness reading is established. V-grooves in probe housing and base allow proper positioning on cylindrical objects. Gauges can be used in any position and have a go/no-go indicator for rapid measurements. Include a wrist strap, neck strap, and leather case with belt straps. Size is 2″ Ht.×8 1/2″ Wd.×1 1/4″ Dp.

Pen-Style Gauges—Use on small, hard-to-reach surfaces. Place tip on the surface to be measured, allowing an internal magnet to make contact. Pull tip away and watch scale and indicator. Note reading when magnet releases. Gauge has two scales and can be used in any position. Includes a leather case with belt clip. Can be used in extreme temperature applications from –150° to +450° F.

Economy Pen-Style Gauge—Use this magnetic gauge for measuring nonferrous coatings such as paints, platings, and plastics on steel. Includes a storage case.

	Scale★		
Magnetic Pull-Off	0-8 mils	**1378T21**	$362.07

Economy Pen Style	1-15 mils	**14055T11**	76.72

★ One mil equals 0.001″.

Digital Coating-Thickness Gauges

These precision instruments have an easy-to-read LCD, a reset function and a solid ruby probe tip (unless noted) for long life and one-point measurement. Plus, they're mils/microns switchable. Ferrous gauges measure the thickness of nonmagnetic coatings such as paint and plating on steel. Ferrous/nonferrous gauges also measure the thickness of nonconductive coatings on ferrous or nonferrous metals. Nonmetal gauges measure coating thickness on materials other than metals, such as plastic, wood, concrete, and fiberglass.

Standard—Have ±3% accuracy. Include a hard rubber case, plastic shims, and one AAA battery. Size is 4″ Ht.×1 1/2″ Wd.×29/32″ Dp.

Universal—Gauges support 11 languages; have hi/low limits; and have continual display of average, min./max. thickness, and number of readings. They include a certificate of calibration traceable to NIST (National Institute of Standards and Technology), a rubber pouch with belt clip, calibration shims, and three AAA batteries. *1453T61*, *T65*, and *T73* store 250 readings. Gauges are 5 3/8″ Ht.×2 3/8″ Wd.×1 1/8″ Dp. and include a wrist strap. Conform to ISO 2808; ASTM B499, D1186, and D1400. *1453T82* and *T83* store 10,000 readings. Gauges are 5 3/4″ Ht.×2 1/2″ Wd.×1 13/64″ Dp. Conform to ISO 2808 and ASTM D6132.

Coated Material	Scale★

★ One mil equals 0.001″.

▲ Probe tip is plastic.

Ultrasonic Thickness Gauges and Calibration Blocks

Thickness Gauges

Highly accurate, hand-held instruments have a 4-digit LCD screen that gives readouts in English and metric units. Both gauges include an ultrasonic coupling medium for maximum surface contact.

Painted-Surface Thickness Gauge— Quickly and accurately measure the metal thickness of a painted structure without removing the coating. Accurate to ±0.001″. Allowable surface temperature range is –40° to +150° F. Uses three AAA alkaline batteries (included). Conforms to ASTM E797.

Thickness Gauge— Measures the wall thickness of materials such as steel and plastic from 0.040″ to 5.000″ with an ultrasonic probe (included) on a 3-ft. cable. Accurate to ±0.001″. Allowable surface temperature range is –40° to +300° F. Uses three AAA alkaline batteries (included).

Optional software and USB cable to download data are sold separately below.

Painted-Surface Thickness Gauge	8729T73	$1,682.98
Thickness Gauge	8729T71	1,160.83

♣ **To Order:** Please specify test material: aluminum or steel.

Magnetic-Particle Flaw Detection Kits

Standard Kit

Use each kit's yoke to create a magnetic field on the part you're inspecting and then apply the powder—defects will immediately appear. The perfect choice for finding defects on ferrous components. Both kits comply with ASTM E1444 and MIL-STD 2132.

Standard kit includes an AC yoke for finding surface cracks, two 1-lb. bottles of powder (one gray and one red), a powder dispenser, a paint marker, wet hand towels, and a plastic case. Yoke has a 10-ft. cord with three-prong plug; operates on 115 VAC, 50/60 Hz.

Cordless kit is completely portable. Includes a DC yoke for finding surface and subsurface cracks, 1-lb. of gray powder, a powder dispenser, a paint marker, wet hand towels, a battery, a battery charger, a battery case with shoulder strap, and a plastic case. Operates on a 6-volt, 12-amp battery that provides 8 hours of use per charge.

Colored-Dye Flaw Detection Kits

Visible Dye Kit

Fluorescent Dye Kit

Reveal cracks and other flaws open to the surface in virtually any nonporous material. Ideal for use on metal surfaces (magnetic or nonmagnetic). The contents of all kits comply with SAE-AMS-2644, ASTM E1417, MIL-STD 271, MIL-STD 2132, and sulfur-chlorine-halogen requirements.

Visible Dye-Penetrant Detection Kit

Flaws become visible under natural light, appearing bright red—no ultraviolet light is needed. Great for weld inspection and spot checking on aluminum, magnesium, brass, copper, cast iron, steel, stainless steel, carbide, stellite, and certain plastics and ceramics. Contains four 16-oz. aerosol cans of cleaner, two 16-oz. aerosol cans of red penetrant, two 16-oz. aerosol cans of white developer, a cloth, a marking pen, wet hand towels, and a plastic case.

Fluorescent Dye-Penetrant Detection Kit

A high-intensity UV light makes fluorescent dye-penetrant visible. Light operates at peak fluorescent output, making this detection kit more sensitive than the visible dye method above. Use for the following materials: aluminum, magnesium, brass, copper, titanium, bronze, sintered carbide, steel, stainless steel, nonmagnetic alloys, ceramics, and glass. Kit contains a 100-watt fan-cooled UV light with bulb and transformer, one 16-oz. aerosol can of fluorescent green penetrant, one 16-oz. aerosol can of white developer, two 16-oz. aerosol cans of cleaner, a cloth, a marking pen, wet hand towels, and a plastic case. UV light has a 10-ft. cord with three-prong plug. Lamp operates on 115 VAC, 60 Hz. ***Refill kit*** (sold separately) includes two cans each of penetrant and developer, four cans of cleaner, a cloth, a marking pen, wet hand towels, and a plastic case.

Magnetic-Field Indicators

Noncalibrated

Calibrated

Indicators measure magnetism in tools and parts after exposure to magnetic chucks, magnetic-particle testing, and magnetized machine tools. Simply place the lower edge of the indicator near or against the object being tested.

Noncalibrated Indicator— Use this economical unit to measure relative intensity and direction of magnetic fields. Scale is black. Housing is plastic and 2″ dia.

Calibrated Indicators— Calibrated at 70°, these indicators measure the direction of a magnetic field in positive/negative and magnitude of magnetic field in gauss. Units have a black scale that measures the magnetic field parallel with the centerline and a red scale that measures magnetic field parallel with the pointer. Housing is aluminum and 2½″ dia.

Calibrated Indicators with Certificate— Exactly the same as the calibrated indicators above, but include a certificate traceable to NIST (National Institute of Standards and Technology).

Gauss Range	Noncalibrated		Calibrated		Calibrated w/Certificate	
10-0-10	8575T11	$39.98	8450T14	$107.50	8450T21	$166.61

50-0-50	_____	_____	8450T18	113.75	8450T23	173.22

Digital Gauss/Tesla Meter

Get magnetic-field measurements to determine electromagnetic interference, to detect flaws in welded joints, and for magnetic-particle testing. Meter reads in gauss, tesla, and ampere/meters. Includes auto zero, min./max./peak hold, and auto range. The three measurement ranges are 200 g, 2 kg, and 20 kg in 0.1 g, 1.0 g, and 10 g increments. Accuracy is 2%; frequency bandwidth is DC-20 kHz. Operating temperature range is 32° to 122° F (0° to 50° C). Unit includes a transverse probe, a zero gauss chamber, four AA batteries, an AC adapter, and a plastic case. Overall size is 6.9″ Ht.×3.9″ Wd.×1.4″ Dp.

Digital Gauss/Tesla Meter	1488T55	$1,055.36
Replacement AA Battery	14715T102	.68

Ultraviolet Light

A sturdy stand allows hands-free use; light can be easily removed for hand-held use. Plus, a switch lets you select between UV and white fluorescent light. Ideal for lab and security images.

Light intensity is 950 microwatts/cm^2 at 3″; wavelength is 365 nm. Lamp uses two 8-watt bulbs (included) and has a beige extruded metal housing with black end caps and filter face. Operates on 115 VAC and includes an 8-ft. cord with three-prong plug. Size is 14 29/32″ Lg.×3 13/16″ Wd.×2 1/2″ Ht.

Lamp	1000T11	$333.29
Replacement UV Bulb	1000T31	25.34

Retractable-Cord UV Lights

Simply pull lights from the ceiling when you need them and when you're done, tug the cord and they retract out of your way. Lights are perfect for UV curing, leak detection, and nondestructive testing applications. All have an impact-resistant, polymer housing and an easy-to-hold pistol-grip handle. Light intensity is 4,800 microwatts/cm^2 at 15″; wavelength is 365 nm. Lights include a 100-watt bulb, an 8-ft. power cord with three-prong plug, a 35-ft. retractable cord on a fly reel, 6-ft. mounting chain, on/off pull chain, and UV-absorbing eyeglasses.

	Wt., lbs.		
120 VAC, 60 Hz	24.8	13605T73	$611.14

High-Intensity UV Lights

100 Watt

160 Watt

High-intensity lights provide brilliant illumination for optimum fluorescence. Light wavelength is 365 nm. Operate on 115 VAC, 60 Hz and include a bulb and an 8-ft. cord with three-prong plug.

***100 Watt*—**Use for nondestructive testing, UV curing, and dye-penetrant inspection. For hand-held or stationary bench-top use; when used on a benchtop head rotates 360°. Lamps include a transformer and have an on/off switch. 1447T17 has a 5.5″ Dia.×8.5″ Lg. lamp head and an 8.5″ Ht.×4.25″ Wd.×6.25″ Dp. transformer; 1447T15 has a 6″ Dia.×9.75″ Lg. lamp head and an 8.5″ Ht.×4.25″ Wd.×6.25″ Dp. transformer. Choose a painted aluminum or a heat-resistant plastic housing. *Optional lens filter* (sold separately) reduces output of visible light, reducing glare and enabling finer particles to be seen.

***160 Watt*—**Self-ballasted lamp needs no transformer, making it more portable. Good for automotive leak detection and magnetic-particle flaw detection. Vented housing keeps unit cool. Handle has finger grips and an on/off switch. Lamp is 6″ Dia.×9.75″ Lg.

UV Magnifying Lights

1495T25

The combination of UV lights and a magnifying lens lets you see the smallest traces of fluorescence during testing. Choose two UV tubes or a combination of two UV tubes and two white fluorescent tubes (for normal light) that work independently of each other. Magnifying lens is plastic, measures 2″ Lg.×4″ Wd., and magnifies 3X (300%) with an 8″ working distance. Housing is polycarbonate with an aluminum reflector, a phenolic handle, and an on/off switch. A friction-lock swivel joint lets you position the head.

Light intensity is 650 microwatts/cm^2 at 6″; wavelength is 365 nm. Operate on 120 VAC and include an 8-ft. cord with three-prong plug. Size is 7″ Lg.×5 3/4″ Wd.×2 1/4″ Ht. UL listed.

Replacement Tube, White Fluorescent, 4-Watt	1495T12	24.06

Broad-Beam UV Lights

A tubular UV bulb sheds light over a wide area. Use for security control, rodent detection, UV curing, and magnetic-particle flaw detection. Lights have a plastic housing and an on/off switch.

***(A) Pocket-Size*—**The smallest and most economical light we offer. It has a 4-watt UV bulb and a built-in white-light flashlight. Light wavelength is 365 nm. Operates on four AA batteries (sold separately below). Size is 6 1/4″ Lg.×2 1/16″ Wd.×7/8″ Ht.

***(B) 115 VAC*—**Has a filter that blocks most visible light interference. Includes a 4-watt UV bulb and an 8-ft. cord with three-prong plug. Light wavelength is 365 nm. Size is 7 13/16″ Lg.×2 13/16″ Wd.×2 1/10″ Ht.

***(C) 12 Volt*—**Has a built-in white-light flashlight, a 6-watt self-filtering UV black light blue (BLB) bulb, and a three-position switch. Light wavelength is 365 nm. Operates on two 6-volt lantern batteries (included). Size is 9 1/2″ Lg.×2 13/16″ Wd.×9 13/32″ Ht.

***(D) Rechargeable*—**Has a rechargeable lead-acid battery that provides approximately five hours of continuous use when fully charged. To recharge, use wall-outlet plug inside unit or optional car-lighter adapter plug sold below. Light includes two 6-watt self-filtering UV black light blue (BLB) bulbs. Wavelength is 365 nm. Size is 5 1/2″ Lg.×3″ Wd.×9 13/16″ Ht.

Hydraulic Drivers for Knockout Hole Punches

The power behind your knockout punch. Use these drivers with punches and dies (sold separately on this page and pages 2317-2318). Drivers come in a carrying case.

Styles A-C work with 19/32″-2½″ hole dia. Round Knockout Hole Punches, all Self-Centering Round Knockout Hole Punches, ⅞″-1 11/16″ hole dia. Self-Centering Round Knockout Hole Punches for Stainless Steel, all Special-Shape Knockout Hole Punches, and all Quick-Cut DB Connector-Shaped Knockout Hole Punches.

Styles D and *E* are compatible with all Round Knockout Hole Punches (except ½″ hole dia.), all Self-Centering Round Knockout Hole Punches, all Self-Centering Round Knockout Hole Punches for Stainless Steel, all Special-Shape Knockout Hole Punches, all DIN-Shaped Knockout Hole Punches, and all Quick-Cut DB Connector-Shaped Knockout Hole Punches.

(A) 8-Ton Hydraulic Driver— For straight-on, front-panel punching. Has two draw studs (⅜″×2 13/16″ and ¾″×4⅛″), a stud adapter, and a spacer.

(B) 8-Ton Right-Angle Hydraulic Driver— Drive head rotates 180° for flexibility in tight spots. Includes two draw studs (⅜″×2 13/16″ and ¾″×4⅛″), a stud adapter, and a spacer.

(C) 8-Ton Flexible Head Hydraulic Driver— Fits in tight spots and around corners. Includes two draw studs (⅜″×2 13/16″ and ¾″×4⅛″), a stud adapter, and a spacer.

(D) 11-Ton Hand-Pump Hydraulic Driver and Ram— For repeated punching. Comes with one ⅜″×2 13/16″ draw stud, one ¾″×5⅜″ draw stud, a stud adapter, 3 spacers, 3-ft. hose, and ½″ step bit.

(E) 11-Ton Foot-Pump Hydraulic Driver and Ram— Punch quickly and easily with your feet and keep your hands free. Includes one ¾″×5⅜″ draw stud, two stud adapters, three spacers, 10-ft. hose, and ½″ step bit.

			Each
A	8-Ton Hydraulic Driver	**3484A15**	$668.78
B	8-Ton Right-Angle Hydraulic Driver	**3490A21**	786.32
C	8-Ton Flexible Head Hydraulic Driver	**3448A2**	798.99
D	11-Ton Hand-Pump Hydraulic Driver and Ram	**3448A1**	843.99
E	11-Ton Foot-Pump Hydraulic Driver and Ram	**3448A3**	1,455.88

Round Knockout Hole Punches

Knockout Punch with Hydraulic Driver (Sold Separately)

Tough enough to cut clean holes in mild steel, fiberglass, and plastic enclosures, these punches are ideal for sockets, plugs, electrical controls, switches, meters, panel lights, relay sockets, timers, and receptacles. A drilled pilot hole for the draw stud is required.

Punches with a 2½″ hole dia. and smaller split the slug into two pieces. Punches with hole diameters larger than 2½″ produce one slug piece.

Punches with 19/32″-2½″ hole dia. can be used with any of the drivers above. Punches with hole diameters larger than 2½″ can be used only with the 11-ton hydraulic drivers on this page.

Also Available: Replacement punch, die, and draw stud. Please ask for 34685A1 and specify part required and hole diameter.

Individual Punches

All punches are made of steel and have a ball-bearing drive. To drive, use a hand wrench, ratchet wrench (see pages 2778-2780), or hydraulic driver (sold separately on this page), except 34685A41-A46, which cannot be used with a hydraulic driver. Each punch includes a die and a draw stud.

Punch Sets

6-Punch Set with Ratchet Driver

6-Punch Set with 11-Ton Hand-Pump Hydraulic Driver and Ram

Sets include punches, dies, and draw studs in a carrying case, unless noted. For more information on the hydraulic drivers, see Hydraulic Drivers for Knockout Hole Punches on this page.

Six-Punch Set with 8-Ton Hydraulic Driver— For straight-on punching.

Six-Punch Set with 8-Ton Right-Angle Hydraulic Driver— Driver head rotates 180° for added flexibility in tight spots.

Six-Punch Set with 8-Ton Flexible Head Hydraulic Driver— Has a versatile driver head that fits into tight spots and around corners.

Six-Punch Set with 11-Ton Hand-Pump Hydraulic Driver and Ram— Also includes a 3-ft. hydraulic hose, adapter, spacers, and a step bit.

10-Punch Set with 11-Ton Hand-Pump Hydraulic Driver and Ram— Furnished with a 3-ft. hydraulic hose, adapter, spacers, and a step bit.

	For Hole Diameters		Per Set
2-Punch Set	1 15/16″, 2⅜″	**34685A32**	$175.09
4-Punch Set	⅞″, 1 7/64″, 1 23/64″, 1 11/16″	**34685A31**	174.42

6-Punch Set with 11-Ton Hand-Pump Hydraulic Driver and Ram	⅞″, 1 7/64″, 1 23/64″, 1 11/16″, 1 15/16″, 2⅜″	**34685A62**	1,049.70
10-Punch Set with 11-Ton Hand-Pump Hydraulic Driver and Ram	⅞″, 1 7/64″, 1 23/64″, 1 11/16″, 1 15/16″, 2⅜″, 2⅞″, 3½″, 4″, 4½″	**34685A68**	1,835.42

▲ Punches are self-centering and designed for use with hydraulic drivers. Set does not include draw studs or carrying case.

Self-Centering Round Knockout Hole Punches for Stainless Steel

Stronger and longer lasting than the punches on page 2316, these punches are ideal for use on tough materials such as 10-ga. stainless steel. They automatically center on the draw stud pilot hole, eliminating the need to make additional cross hair marks. A hydraulic driver is required to operate (sold separately on page 2316). Punches with 7/8″-1 11/16″ hole dia. can be used with all hydraulic drivers listed on page 2316; punches with 1 15/16″ hole dia. and larger can be used only with 11-ton hydraulic drivers.

Also Available: Replacement punch, die, and draw stud. Please ask for 3454A61 and specify part required and hole dia.

Individual Punches

Each punch includes a die and draw stud.

Hole Dia.	For Conduit Size	Cutting Capacity, Stainless Steel		Each
7/8″	1/2″	10 ga. (0.1345″)	3454A41	$171.28
1 7/64″	3/4″	10 ga. (0.1345″)	3454A42	186.06
1 7/32″	Oil-Tight	10 ga. (0.1345″)	3454A43	253.43
1 23/64″	1″	10 ga. (0.1345″)	3454A44	218.15
1 11/16″	1 1/4″	10 ga. (0.1345″)	3454A45	222.55
1 15/16″	1 1/2″	10 ga. (0.1345″)	3454A46	310.31
2 3/8″	2″	10 ga. (0.1345″)	3454A47	378.64

Punch and Die Sets

Sets are complete with punches, dies, and draw studs and come in a steel carrying case. *Six-punch set with hydraulic driver* also includes an 11-ton hydraulic ram, hydraulic hand pump, 3-ft. hydraulic hose, and all necessary couplings.

	For Hole Diameters		Each
4-Punch Set	7/8″, 1 7/64″, 1 23/64″, 1 11/16″	3454A28	$557.65
6-Punch Set with Hydraulic Driver	7/8″, 1 7/64″, 1 23/64″, 1 11/16″, 1 15/16″, 2 3/8″	3454A31	1,873.23
7-Punch Set	7/8″, 1 7/64″, 1 7/32″, 1 23/64″, 1 11/16″, 1 15/16″, 2 3/8″	3454A29	1,198.61

4-Punch Set

Self-Centering Round Knockout Hole Punches

The special design of these punches allows you to quickly make perfectly centered holes. No need to draw cross hairs or make adjustments; they automatically align themselves in the draw stud pilot hole. Tools also split the slug into two pieces for easy removal.

All punches are made of steel and have a ball-bearing drive to reduce friction. Die and draw stud included. To drive, use a hand wrench, ratchet driver, or any of the hydraulic drivers listed on page 2316.

Hole Dia.	For Conduit Size	Cutting Cap., Mild Steel		Each
7/8″	1/2″	10 ga. (0.1345″)	34685A49	$42.11
1 7/64″	3/4″	10 ga. (0.1345″)	34685A52	60.04
1 23/64″	1″	10 ga. (0.1345″)	34685A53	69.28
1 11/16″	1 1/4″	10 ga. (0.1345″)	34685A54	74.97
1 15/16″	1 1/2″	10 ga. (0.1345″)	34685A55	96.36
2 3/8″	2″	10 ga. (0.1345″)	34685A56	118.61

Plier-Action Keyway Punch

Squeeze the handles together, and let the plier action do the rest. Also known as a keyway nibbler, this punch instantly cuts 1/8″ and 3/16″ keyways in existing holes (7/8″ dia. or larger) for oil-tight switches and other applications. Tool is made of steel and typically used with round hole knockout punches. Use on up to 10-ga. (0.1345″) mild steel.

3536A11 ..... Each $220.27

DIN-Shaped Knockout Hole Punches

Use these punches to cut DIN-sized openings for rectangular- and square-shaped instruments. Punches have a hardened tool steel cutting surface. Furnished in a plastic case.

Manual Wrench Operated

Manual Wrench-Operated Punches—Use an adjustable wrench to turn the draw bolt until the punch completes the hole. Cutting cap. is 16-ga. (0.0598″) mild steel; 18-ga. (0.0478″) stainless steel; and 14-ga. (0.0747″) aluminum. Puller adapter is required (sold separately); hydraulic driver is optional (sold separately).

Hydraulic Driver- and Cylinder-Operated Punches—Require less manpower than manually operated punches. They have a cutting capacity of 12-ga. (0.1046″) mild steel; 14-ga. (0.0747″) stainless steel; and 10-ga. (0.1345″) aluminum. Hydraulic driver and cylinder are required (sold separately).

	Hole Size, (A)×(B)		Each
Manual Wrench-Operated Punches			
1/32 DIN	0.88″ ×1.78″	34835A51	$536.25
3/64 DIN	0.88″ ×2.68″	34835A52	579.58
1/16 DIN	1.776″×1.776″	34835A53	590.42
1/16 DIN	1.313″×2.625″	34835A54	622.92
Puller Adapter		34835A35	140.78
Hydraulic Driver- and Cylinder-Operated Punches			
1/8 DIN	1.776″×3.626″	34835A46	695.00
1/4 DIN	3.626″×3.626″	34835A47	795.00
11-Ton Hydraulic Driver		3448A1	843.99
Hydraulic Cylinder		34835A49	595.00

Special-Shape Knockout Hole Punches

Make precise, nonround holes in sheet metal with these specially shaped punches. Ideal for creating openings for various panel cutout switches.

Also known as chassis punches, they have an automatic centering design to accurately align with dies. A ball-bearing drive nut is included for use with a hand wrench (except for keyway punches). Die and draw stud also included.

Use with any hydraulic driver listed on page 2316. A ***stud adapter*** (sold separately) is required when using a hydraulic driver, unless noted.

Punches

DB Connector-Shaped Knockout Hole Punches

Create panel openings for mounting DB (D-subminiature) connectors without leaving a hole in your wallet. These economical punches are hardened steel and cut through 22- to 16-ga. (0.0299″-0.0598″) mild steel and 1/8″ aluminum. Edges can be resharpened. Use for Amphenol, T & B Ansley, ITT Cannon, TRW Cinch, 3M, and other equivalent connectors. All include a die, drive screws, strip of 25 adhesive templates, and hex keys. Not for use with hydraulic drivers.

No. of Pins	Hole Size, (A)×(C)		Each
9 Pins	0.755″×0.440″	3476A51	$202.17
15 Pins	1.085″×0.440″	3476A52	202.17

50 Pins	2.165″×0.540″	3476A58	313.04

▲ For mounting to the front side of panel.

Quick-Cut DB Connector-Shaped Knockout Hole Punches

Use these tools to make fast, accurate punch-outs and mounting slots for DB (D-subminiature) connectors. Drill one 7/16″ pilot hole and use a hand wrench or an 11-ton hydraulic driver to tighten the stud.

Punches are steel and cut through up to 16-ga. (0.0598″) mild steel and 1/8″ aluminum. Use for front or back mount of ITT Cannon, TRW Cinch, and equivalent connectors. Includes a die and draw stud. Furnished in a plastic box.

No. of Pins	Hole Size, (A)×(B)×(C)		Each
9 Pins	0.787″×0.982″×0.469″	34195A61	$502.45

50 Pins	2.201″×2.402″×0.579″	34195A65	540.46

Bench-Mount Hole Punches

Mount these manually operated punches to your workstation (fasteners not included), and punch holes through metal or other materials. Overall height listed in table below does not include handle.

(A) Smooth Action Bench Punches—With 34 roller bearings in the lever, these medium duty punches have a smooth, fluid punching action. They include a 9/32″ round punch and die as well as adjustable die shoes to punch light-gauge metal. Handle is 24 1/2″ long.

3441A19 is hot-rolled steel and has four 3/8″ dia. mounting holes. 3441A18 is cast iron and has three 3/8″ dia. mounting holes.

Optional workplate for Style A is steel and provides you with a larger work surface for punching. Measures 8″ Wd.×6″ Dp.

(B) Deep Throat Bench Punch—Punch larger workpieces than *Style A* and make holes further from the edge. Punch is medium duty, made of ductile iron, and comes with a 1/4″ round punch and die. Base has four 9/16″ Wd.×7/8″ Lg. mounting slots. Handle is 29″ long.

(C) Heavy Duty Rotary Handle Bench Punch—Has the greatest punching capacity of our punches. Made of cast iron, it has a ball-bearing, rotary action handle for smooth operation. A 1/2″ round punch, die, and coupling nut are included. Base has two 1/2″ Wd.×1″ Lg. mounting slots. Handle socket accepts 1″ unthreaded pipe up to 48″ long to extend handle.

Optional ratchet handle for Style C works in tight spots where rotating the handle 360° isn't possible.

(D) Heavy Duty Large Capacity Bench Punches—With their geared mechanism, these tools punch through tougher materials than other punches. Made of drop-forged steel, they are for use on structural steel channels (2 1/2″ flange) and angle iron (2 1/2″ Ht.×2 1/2″ Wd.×1/4″ Dp. maximum size). Tools include a set of two stripping plates to help remove the punch from your material. A die shoe is required (sold separately below). Base has four 17/32″ dia. mounting holes. Handle is 30″ long.

Portable Electro-Hydraulic Hole Punch

When punching takes you away from the workstation, bring the punch with you. With a 9-ft. power cord and two-prong plug, this easy-to-handle tool simply needs to be plugged in and it's ready to go. Its hydraulic pump with automatic return enables you to punch every 1.2 seconds. Use for flat bar stock, angle iron, channel, and sheet stock. Housing is aluminum. Punching tool is 20 5/32″ Ht.×5 1/2″ Wd.×6 1/2″ Dp. and has a punching pressure of 13.2 tons. Motor is 115 VAC single phase, 9.5 amps.

Punch includes tool, one round 9/16″ punch, two dies, stand, foot switch, and plastic carrying case.

Punch

Capacity in Mild Steel: Max. Hole Dia.	Max. Metal Thick.	Throat Dp.		Each

Portable Heavy Duty Hydraulic Hole Punch

Made of heavy duty forged steel, this tool punches round holes when used with any 10,000 psi hydraulic pumping source (see hydraulic pump below or pages 1387-1388). Ideal for bus bar, tower iron, railing, and I-beams. Tool measures 13 1/4″ Ht.×3 3/4″ Wd.×7 1/2″ Dp. and has a punching pressure of 35 tons.

Punch includes tool; four round punches and dies in sizes 7/16″, 9/16″, 11/16″, and 13/16″; a 3/8″ female quick-coupler for attaching a 10,000 psi hydraulic hose (see page 1389); and metal carrying case.

Extra Punch and Die Sets—Include one round punch and one die. **To Order:** Please specify size: 5/16″, 7/16″, 9/16″, 5/8″, 11/16″, or 13/16″.

Capacity in Mild Steel: Max. Hole Dia.	Max. Metal Thick.	Throat Dp.	Punch	Each	Extra Punch and Die Sets	Per Set

Hydraulic Pump—This 10,000 psi pump has a 10-ft. remote control cable that provides you with full control of the pump as well as safety and convenience. It has a 1/2 hp motor that operates on 115 VAC, 60 Hz. Pump measures 14″ Ht.×6″ Wd.×7″ Dp.

3456A41 ..... **Each** $2,231.25

Portable Hole Punches

Punching Tool Kit

Easy to handle and easy to take with you, these tools punch round holes in mild steel or stainless steel. ***Punching tools*** include one punch and die for mild steel.

(A) Lever with Cam Action— Feature a powerful cam gear design. 3531A11 is cast iron, has a slip-on grip handle, and comes with a 7/32″ punch and die. It has a max. hole diameter of 1/4″ in 14-ga. (0.0747″) stainless steel with a max. metal thick. of 10 ga. (0.1345″) with a 1/8″ punch.

3433A21 is drop-forged steel and includes a 1/4″ punch and die. It has a max. hole diameter of 15/32″ in 14-ga. (0.0747″) stainless steel with a max. metal thick. of 10 ga. (0.1345″) with a 1/4″ punch.

3530A11 is made of drop-forged steel. It includes a 1/4″ punch and die. It has a max. hole diameter of 17/32″ in 12-ga. (0.1046″) stainless steel with a max. metal thick. of 3/16″ with a 5/16″ punch.

(B) Compact Lever with Cam Action and Adjustable Throat— Designed like *Style A* punches, but small enough to fit in your tool box. They have an adjustable throat for punching at varying depths from the edge of material. Made of cast iron with comfort grip handles. 3461A22 comes with a 3/16″ punch and die. 3485A12 includes a 9/32″ punch and die.

(C) Rotary Lever with Ball-Bearing Action— The lever smoothly rotates 360° so you can punch in close quarters. Made of cast iron with plastic-dipped handles. Includes a 9/32″ punch and die. Handle is 19 1/2″. *Optional ratchet handle* interchanges with the top rotary lever for use in tight spots.

Small-Diameter Hole Punches

Bigger isn't always better. These steel punches make small, precise holes in spots other tools can't reach. Punches have a waste slot in the handle to easily remove cuttings. Use on soft nonmetallic materials.

One-Piece Punches

Handle and punch are one complete unit.

6-Piece Sets— Have one of each size listed. Supplied in a plastic roll.

Hole Dia.		Each
1/8″, 5/32″, 3/16″, 1/4″, 5/16″, and 3/8″	3424A41	$44.40
3/16″, 1/4″, 5/16″, 3/8″, 7/16″, and 1/2″	3507A11	38.33

Multi-Diameter Hole Punching Tool

You'll get a threaded handle and seven interchangeable screw-in punch tubes in the following sizes: 5/64″, 3/32″, 7/64″, 1/8″, 5/32″, 11/64″, and 3/16″.

3426A1 ..... Per Set $34.96

Sheet Metal Fastening Punch

A punch that doesn't quite punch. Unlike other tools, these punches don't cut holes in the material. Instead, they create indents, or dimples, that can be used to securely hold pieces of sheet metal together. Also known as button punches.

For ease of use, the head rotates 360° to punch in any position and the jaw ends are offset to give you a clean view of the material.

Indents in Sheet Metal

Capacity in Mild Steel: Indent Dia.	Max. Metal Thick.	Throat Depth	O'all Lg.		Each
3/8″	3 sheets of 20 ga. (0.0359″)	1 3/4″	26″	3467A11	$525.95
Replacement Punch and Die Set				3467A12	89.93

Oblong Hole Arch Punches

Make oblong holes in soft nonmetallic materials with these punches. They are made of alloy steel and taper to provide easy clearance for the punched-out material.

Hole Size, (A) × (B)	Punch Lg.		Each
1/2″ × 7/64″	4 1/2″	3503A11	$40.13

1 1/2″ × 13/64″	6 3/4″	3503A14	55.97

Round Hole Arch Punches

The unique design of these punches makes them ideal for punching round holes in soft metals (soft brass, copper, and lead) as well as soft materials (leather, rubber, canvas, and gasketing). They have a tapered head to prevent clogging and a strengthened cutting edge for extra durability. All conform to U.S. Gov't. Spec. GGG-P-833a. For best results, use on a solid surface with a punch-cutting pad (see 3496A on page 2321).

Inch punches are hardened tool steel; ***metric*** punches are forged steel.

13-Punch Deluxe Set

25-Punch Dual-Cutting Head Set

Punch holes and internal radii without blowing a gasket. These punches cut right through gaskets and soft materials (leather, rubber, canvas, and felt) as well as soft metals (foils).

Sets are furnished in a plastic carrying case. For best results, use a hardwood block or punch-cutting pad underneath the material to be cut. If the set you select does not include a pad, see 3496A on the following page.

Economy Set

10-Punch Set— Contains 1/4", 5/16", 3/8", 7/16", 1/2", 9/16", 5/8", 3/4", 7/8", and 1" punches and driving handle.

3430A12 ..... **Per Set** $38.92

Deluxe Sets

Sets include a handle, punches, a precision centering pin, and a punch-cutting pad. Use the precision centering pin to easily and accurately cut both washers and gaskets. The handle is made of drop-forged steel and has an arched design with quick-release locking mechanism for fast punch changes. Its large striking surface minimizes miss-hits, and the step-relief design eliminates clogging.

7-Punch Deluxe Set— Contains 1/4", 3/8", 1/2", 5/8", 3/4", 7/8", and 1" punches.

3466A15 ..... **Per Set** $142.31

13-Punch Deluxe Set— Contains 1/4", 5/16", 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", 3/4", 13/16", 7/8", 15/16", and 1" punches.

3466A16 ..... **Per Set** $196.53

Dual-Cutting Head Sets

Use these sets to create gaskets, washers, and rings in one operation. With a step-down mount and a threaded mount, the included handle can hold two punch heads and cut both the inner and outer holes at once. Also for use on foam, cardboard, rubber fiber, and lead.

10-Punch Set— Contains 1/8", 3/16", 1/4", 5/16", 3/8", 7/16", 1/2", 9/16", 5/8", and 3/4" punches with dual-cutting heads.

33785A51 ..... **Per Set** $133.17

15-Punch Set— 1/8", 3/16", 1/4", 5/16", 3/8", 7/16", 1/2", 9/16", 5/8", 3/4", 7/8", 1", 1 1/16", 1 1/8", and 1 3/16" punches with dual-cutting heads.

33785A11 ..... **Per Set** $206.80

25-Punch Set— 1/8", 3/16", 1/4", 5/16", 3/8", 7/16", 1/2", 9/16", 5/8", 3/4", 7/8", 1", 1 1/16", 1 1/8", 1 3/16", 1 1/4", 1 5/16", 1 3/8", 1 7/16", 1 1/2", 1 5/8", 1 11/16", 1 3/4", 1 7/8", and 2" punches with dual-cutting heads.

33785A12 ..... **Per Set** $409.80

10-Punch Metric Set— 3, 4, 6, 8, 10, 12, 14, 16, 18, and 20 mm punches with dual-cutting heads.

33785A52 ..... **Per Set** $128.00

15-Punch Metric Set— 3, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, and 30 mm punches with dual-cutting heads.

33785A14 ..... **Per Set** $206.60

29-Punch Metric Set— 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, and 50 mm punches with dual-cutting heads.

33785A15 ..... **Per Set** $459.55

Shim-Stock Punch Sets

Make your own washers, shims, and gaskets in just seconds. These punches cut steel, brass, rubber, and plastic up to 0.025″ thick, except the punches in the ***9-pc. large-diameter inch set***, which cut brass, rubber, and plastic up to 0.020″ thick and steel up to 0.015″ thick. All punches also cut stainless steel and heat-treated steel up to 0.010″ thick. Punches are made of tool steel. Furnished in a plastic case.

10-Pc. Metric Set

Small-Diameter Sets

To use, scribe center lines, align punch and base with center lines, and then hit with hammer.

10-Pc. Inch Set—Contains one each of 1/8″, 3/16″, 1/4″, 5/16″, 3/8″, 7/16″, 1/2″, 5/8″, and 3/4″ punch sizes and base.

3472A11 ..... **Per Set** $141.65

10-Pc. Metric Set—Contains one each of 3.5, 5, 7, 8.5, 10, 11.5, 13.5, 16.5, and 19.5 mm punch sizes and base.

3861A56 ..... **Per Set** $122.54

Small-Diameter and Large-Diameter Sets with ID Pilots

No need for scribing; the ID pilots automatically center the OD punches in relation to the ID hole.

18-Pc. Small-Diameter Inch Set—Contains one each of 1/8″, 3/16″, 1/4″, 5/16″, 3/8″, 7/16″, 1/2″, 5/8″, and 3/4″ punch sizes; eight ID pilots; and base.

3455A71 ..... **Per Set** $248.60

9-Pc. Large-Diameter Inch Set—Contains one each of 7/8″, 1″, 1 1/8″, and 1 1/4″ punch sizes; four ID pilots; and base.

3455A72 ..... **Per Set** $384.97

20-Pc. Metric Set—Contains one each of 3, 4, 5, 6, 7, 8, 10, 12, 16, and 20 mm punch sizes; nine ID pilots; and base.

3455A73 ..... **Per Set** $286.20

Multi-Diameter Expandable Transfer Punches

A simple twist expands and contracts the end of these punches, allowing you to transfer the center of any hole within their diameter range. Precision-made of hardened and alloy steel, they have a point that is accurate to 0.005″, even in thin material.

Diameter Range		Body Length		Each
1/4″ -5/16″;	6- 8 mm	3 25/32″	**3380A12**	$50.24
5/16″-7/16″;	8-11 mm	4 1/64″	**3380A13**	57.12
7/16″-11/16″;	11-17 mm	4 1/2″	**3380A14**	66.03

3-Pc. Set—Contains one of each punch listed above. Furnished in a plastic case.

3380A11 ..... **Per Set** $137.80

Self-Aligning Threaded-Hole Transfer Punches

Transfer entire hole patterns without having to meticulously align your punches. These specially designed punches, also known as transfer screws, have a uniform shoulder height of 0.200″ regardless of diameter. By inserting them into the hole and tightening with a wrench or pliers, the punches automatically align themselves. Made of steel.

Individual Punches

Thread Size		Each	Thread Size		Each
10-24	**3400A11**	$1.92	3/8″-24	**3400A33**	$2.30

1/2″-13, 5/8″-11, 3/4″-10	**3400A26**	34.67

Punch-Cutting Sheets

Keep the edges of your punches sharp by using them with these resilient polypropylene sheets. Ideal for arch and gasket punches. Color is translucent off-white.

Lg. × Wd. × Thick.		Each
12″ × 12″ × 1/2″	**3496A22**	$15.40
12″ × 24″ × 1/2″	**3496A23**	28.23

Plier-Action Hole Punches

Squeeze the handles to punch round holes in leather, canvas, and rubber. Punches are 8 1/2″ long and have a 1 1/2″ throat depth. The punch tubes are steel with a black-oxide finish, unless noted.

Single-tube punches have a forged-steel frame with self-opening spring-return handles.

Economy multi-tube punch has a revolving head and a pressed nickel-plated steel frame. Includes six punch tube sizes: 5/64″, 3/32″, 7/64″, 1/8″, 5/32″, and 3/16″.

Deluxe multi-tube punch has a revolving head, forged-steel frame, and self-opening spring-return handles. It comes with six punch tubes in the following sizes: 3/32″, 7/64″, 1/8″, 5/32″, 11/64″, and 3/16″.

Single-Tube Punch

Deluxe Multi-Tube Punch

		Each
1/8″ Single-Tube Punch	**3435A22**	$74.83
3/16″ Single-Tube Punch	**3435A21**	74.83
1/4″ Single-Tube Punch	**3435A11**	74.83
Economy Multi-Tube Punch	**3488A9**★	17.55
Deluxe Multi-Tube Punch	**3488A1**	82.63

★ Punch tubes are black-zinc steel.

Threaded-Hole Transfer Punches

Ideal for copying the exact placement of through and blind-threaded holes to mating parts. Also known as transfer screws, these punches come with six heat-treated steel transfer punches and a hollow handle that doubles as a wrench and storage holder for the punches. Additional uses include locating fixtures, air cylinders, and chucks.

Transfer Punches

Use to transfer the location of threaded, drilled, and reamed holes from one piece of metal to another that requires identical holes. These U.S.-made punches are made from top-quality heat-treated tempered steel with a black-oxide finish for durability. All are approximately 4⅞″ long.

The diameter tolerances of these punches are ±0.0005″. Punches with diameters of 1/16″ to 3/32″, #40 to #60, and 1 mm to 2 mm are approximately 0.002″ undersized. Those with diameters 7/64″ to 17/32″, A to Z, #1 to #39, and 2.5 mm to 13 mm are approximately 0.0025″ undersized. Punch diameters 35/64″ to 2″ and 13.5 mm to 25 mm are approximately 0.003″ undersized.

Punch sets are furnished in a storage stand.

Punch Sets

28-Pc. Inch-Size Set

***28-Pc. Inch-Size Set*—**Includes the following punch sizes: 3/32″ to 1/2″ in 1/64″ increments, plus 17/32″ size.
3374A11 ..... **Per Set** $53.75

***33-Pc. Inch-Size Set*—**Includes the following punch sizes: 1/2″ to 1″ in 1/64″ increments.
3374A93 ..... **Per Set** $212.75

***26-Pc. Letter-Size Set*—**Comes with a complete set of letter sizes from A to Z.
3374A91 ..... **Per Set** $82.47

***60-Pc. Wire-Gauge-Size Set*—**Comes with a complete set of wire-gauge sizes from #1 to #60.
3374A92 ..... **Per Set** $102.58

***25-Pc. Metric-Size Set*—**Includes punches in the following sizes: 1 mm to 13 mm in 0.5 mm increments.
8962A41 ..... **Per Set** $82.40

***25-Pc. Metric-Size Set*—**Includes punches in the following sizes: 13 mm to 25 mm in 0.5 mm increments.
8962A35 ..... **Per Set** $181.22

Blind-Hole Transfer Punches

108-Pc. Set

Designed for holes that don't extend all the way through the workpiece, these punches easily locate opposite centers. Also known as blind-hole spotters. Punches are made of steel. Package quantity is six.

Also Available: Additional individual punches. Inch sizes in 1/32″ intervals up to 1″ dia. Please ask for 3414A21 and specify size. Package quantity is six.

Punch Sets

Sets include plastic tubes that contain six of each punch size listed. Packed in a steel case with a rack for easy identification.

***66-Pc. Set*—**Six each of the 11 sizes from 11/16″ to 1″ in 1/32″ increments.
3414A12 ..... **Per Set** $86.71

***108-Pc. Set*—**Six each of the 18 sizes from 1/8″ to 2 1/32″ in 1/32″ increments.
3414A11 ..... **Per Set** $87.00

Self-Centering Transfer Punches

Push down on the spring-loaded, cone-shaped mechanism of these tools to self-center them in any hole shape—round, rectangular, elongated, and square. These punches are made of hardened steel and work for both inch and metric hole sizes. Use on materials up to 2″ thick and with any sized hole within their diameter range.

To use, set cone in hole and push and hold the knurled body down on the material surface to center. Then slide the punch down and tap it with a hammer to mark the workpiece.

Dia. Range		Each
3/16″- 5/8″; 5-16 mm	8963A1	$16.01
3/16″-1 1/16″; 5-27 mm	8963A2	18.78

Automatic Center Punches

Steel Handle

Aluminum Handle with Pocket Clip

No need for a hammer; just press down on the punch handle to drive the point down. Turn the knurled cap to adjust the stroke impact from light to heavy. Punches have a hardened tool steel point, which is replaceable in steel handle punches.

Premium Automatic Center Punches

Steel Handle

Aluminum Handle with Self-Centering Sleeve

Marking centers with these premium punches is so easy you'll only need one hand. Simply press down on the handle to automatically strike a blow and mark the center. Adjust the stroke impact from light to heavy by turning the knurled cap. Punches have a hardened tool steel point that can be removed for regrinding and replacement.

Center Punch for Curved Surfaces

Find and mark the vertical center of pipe, round stock, and other curved surfaces. This punch has a jig and a level set in shock-resistant material to ensure accurate results. Punch is hardened tool steel. Body is aluminum. Use the adjustable guide to reproduce identical layouts on multiple workpieces. Body is 1 7/8″ Lg.×1 1/2″ Wd.×1″ Ht. Use on surfaces with a 1/4″ to 8″ diameter.

3436A32 ..... **Each** $40.62

Optical Center Punch

Make accurate center marks over scribed lines with this unique punch. Look through the optical lens to center the holder and pinpoint the exact spot you want. Then replace the lens with the included tool steel center punch to make your mark. Holder has an anodized aluminum main body with cork base that prevents movement. Body is 1 7/8″ Dia.×1″ Ht. Furnished in a plastic case.

		Each
Optical Center Punch	3440A21	$75.00
Repl. Centering Optical Lens	3440A66	39.00

Center Punches

Round Knurled Handle

Hexagonal Handle

Make small marks in metal and other materials. Typically used before drilling, these punches can mark the center of a hole to prevent your drill bit from wandering. Made of alloy steel with a polished taper and point.

8-Pc. Inch Set—Punches are tool steel and have a round knurled handle with black-oxide finish. Punches are 4″ long. Set contains 1/16″, 3/32″, 1/8″, 5/32″, 3/16″, 7/32″, 1/4″, and 5/16″ pin sizes. Furnished in a vinyl pouch.

3480A11 ..... **Per Set** $23.20

10-Pc. Inch Set—Punches are heat-treated alloy steel with a black-oxide finish and have a hexagonal handle. Set contains 1/8″×4 3/4″ Lg., 1/8″×7 7/8″ Lg., 3/16″×5 1/4″ Lg., 3/16″×7 7/8″ Lg., 1/4″×5 3/4″ Lg., 1/4″×7 7/8″ Lg., 5/16″×6″ Lg., 5/16″×8″ Lg., 3/8″×6″ Lg., and 3/8″×8″ Lg. punches.

3505A11 ..... **Per Set** $88.08

6-Pc. Metric Set—Punches are made of heat-treated alloy steel with a black-oxide finish. They are 6″ long and have a hexagonal handle. Set contains 3, 4, 5, 6, 7, and 8 mm pin sizes. Furnished in a vinyl pouch.

34245A69 ..... **Per Set** $34.13

Nonmarring Brass Pin Punches

Round Handle

Hexagonal Handle

Softer than their steel counterparts, these brass pin punches reduce marring of work surfaces.

Round-handle punches have a matte finish and a knurled handle.

Hexagonal-handle punches have a brushed finish.

8-Pc. Hexagonal-Handle Set—Contains one each of the hexagonal-handle punches listed above. Furnished in a vinyl pouch.

34255A7 ..... **Per Set** $40.20

Solid Punches

Loosen pins and rivets for final removal by a pin punch. These punches have a hexagonal handle, except the brass punch, which has a round handle.

Alloy steel punches have a black-oxide finish, unless noted.

High-carbon steel punches have a polished taper and are heat-treated.

Brass punch has a round knurled handle and is less likely to mar surfaces than steel.

34235A67 ..... **Per Set** $35.25

Punch and Chisel Holders

Firmly grip punches, chisels, drift pins, and other impact tools with these holders while protecting your hands from stray blows.

Style A—The large striking area shields your hand while the holder absorbs the shock of your blow. Use with punches and chisels with a minimum length of 6".

Styles B and ***C***—Turn handle to tighten. *Style C* also has a spring-loaded clamp and foam grip to reduce shock.

Styles D and ***E***—Holders have a screw at the bottom of the handle for tightening. *Style E* also has a brass rivet to resist sparking.

	Tool Size Capacity	Handle Material	O'all Lg.		Each

Arbor Presses

Use for staking and riveting as well as for installing and removing bearings and arbors. The lever arm slides so when it's clamped in the center it can be spun to bring the ram down. Maximum leverage is achieved when the lever arm is fully extended and clamped at one end. Frames are cast iron and rams are solid steel without any drilled or tapped holes (unless otherwise stated). Mounting fasteners are not included.

Bench Mount with Removable Rotating Base Plate and Square Ram

Wall Mount

Arbor Presses with Fixed Base Plate

Standard Bench Mount Presses— The fixed base plate, or platen base, is a flat machined surface that allows you to easily affix dies, fixtures, press-in assemblies, and printed circuit boards. Rams are square.

1-ton model has two 1/2″ dia. holes for bench mounting. The ram housing can be shimmed to compensate for ram wear.

1 1/2-ton model has two 5/8″ dia. holes for bench mounting. The ram housing can be shimmed to compensate for ram wear. Optional *floor stand* is steel and has four 9/16″ dia. holes for floor mounting.

3-ton model has two 3/4″ Dia. × 1 1/2″ Lg. slots for bench mounting. It has adjustment screws to keep ram aligned. Optional *floor stand* is steel and has four 3/8″ slots for floor mounting.

Arbor Presses with Removable Rotating Base Plate

Rotating base plate is removable and has four machined openings (unless otherwise stated) to allow arbors or shafts of different diameters to pass through.

Economy Bench-Mount Presses— Rams are square with a drilled hole and have adjustment screws to ensure alignment. Presses have two 7/16″ dia. mounting holes for bench mounting. 2444A62 has a handwheel to rapidly raise or lower ram into position and can be used for light duty pressing.

Standard Bench-Mount Presses— Bench mount using the two 5/8″ dia. mounting holes, except the 1-ton model has two 1/2″ dia. mounting holes. *Presses with square rams* have five machined openings and the ram housing can be shimmed to compensate for ram wear.

Optional *floor stands* are made of steel. They have six 11/16″ dia. mounting holes, except 2425A672 has four 1/2″ dia. mounting holes.

Wall-Mount Press— Has a round ram. Attach to a wall, a sturdy column, or a machine side to save valuable bench space. The head is separate from the base, so the height above the base is unlimited. Spacer plates (not included) can be inserted behind the head and base for additional throat depth. The base and the head each have four 11/16″ dia. mounting holes.

★ Furnished with a handwheel to rapidly raise or lower ram into position. Can also be used for light duty pressing.

Low-Effort Arbor Presses

Get more force with less effort. These presses give you more leverage with minimal force. They have a cast iron frame and a removable rotating base plate with four openings (unless noted) to allow arbors or shafts of different diameters to pass through. Rams are solid steel without any drilled or tapped holes. Rams are square except 2426A12, which has a round ram.

Arbor Press with Easy-Effort Lever— Insert a sliding pin to easily convert from single leverage to compound leverage. Rams have adjustment screws to ensure ram alignment. Bench mount using the two 41/64″ dia. mounting holes (fasteners not included).

Arbor Presses with Easy-Access Lever— A ratcheting device allows lever to be used in the most convenient position. Simply turn the handwheel to quickly advance and position the ram, thus lowering the lever arm into a comfortable position for the final application of force. Presses have two 5/8″ dia. mounting holes except 2426A12, which has two 11/16″ dia. holes and 2426A67, which has two 11/16″ dia. mounting holes (fasteners not included).

Optional *floor stands* are steel. 2425A672 has four 1/2″ dia. mounting holes; 2442A31 has four 9/16″ dia. holes; 2425A24 has six 11/16″ dia. holes; and 2426A672 has four 11/16″ dia. holes. Mounting fasteners included.

♣ Base plate has five openings.

Compact Arbor Presses

1

2

3

4

5

Designed for working on and assembling small parts made of light-gauge metal and plastic. Mounting fasteners are not included.

(1&2) Side-Arm Presses— Lever arms have manual return.

Style 1— Ram is steel and round. It is accurately keyed into the head and aligned with a 5/8″ dia. hole in the base. Frame is cast iron. Base has two 1/4″ dia. holes for bench mounting.

Style 2— Ram is steel, square, and reversible. One end is solid and the other end has a 1/4″ dia. hole and a tapped hole on the side with 10-32 threads for a set screw or custom fixturing. Frame is die cast zinc. Base has a 1/2″ slot for arbor work and two holes, each with a 1/4″-20 screw for attaching dies. Base also has four 1/4″ dia. holes for bench mounting. Arm is adjustable. When arm is clamped in the center it can be spun to bring ram down. Maximum leverage is achieved when arm is fully extended and clamped on one end.

(3) Side-Arm Press with Deep Throat— Cast iron press has a deep throat for larger items. Base and column are separate pieces held together by four screws. Add a riser block between base and column flange to increase clearance over base. Ram is steel, round, and aligned with the 5/8″ dia. hole in the base. Base also has two 3/8″ dia. holes for bench mounting. The press has an adjustable upstroke limiter. Lever arm has manual return.

(4) Side-Arm Presses with Adjustable Height— Presses are cast iron and have two clamp screws that hold the adjustable head in place. Head adjusts approximately 7 1/4″, enabling you to use a variety of tool setups. Also reduces the time spent operating the lever for take-up. Ram is steel and has a tapped hole with 10-32 threads on the end. Lever arms have manual return.

2423A11 has an adjustable upstroke limiter. Base has a 5/8″ dia. hole for tool setups. Ram is square. 2423A12 has an adjustable down stop and upstroke limiter. Base has two 1/4″ dia. holes for mounting. Ram is round.

(5) Center-Arm Press— Operating arm lever is centered directly on top of ram for easy use by right- and left-handed workers. Frame is aluminum. Ram is round, steel, and has a 9/32″ Dia.×0.85″ Dp. hole and set screw for tool attachment. Base has a 1/4″ T-slot for tool setups. Bench mount using the two 9/32″ dia. holes in the base. Two springs return handle and ram to starting position.

Hydraulic Arbor Press

Manual hydraulic pump provides 20,000 lbs. of ram pressure. The long, adjustable lever arm provides excellent control with little effort. Maximum leverage is achieved when the lever arm is fully extended and clamped at one end. Ram is steel, round, and self-retracting. Press is steel and bench mounts using the six 1/2″ dia. mounting holes (fasteners not included). The adjustable relief valve allows you to set any pressure below the 20,000-lb. maximum.

Press includes a 4″ OD pressure gauge that reads 0 to 12 tons in 100-psi increments and in 200-pound increments, a removable ram tip (full usable ram length is 6 5/8″), and a removable 4 1/2″ Lg.×12″ Wd.×1 1/4″ Ht. base plate with a 1 1/4″ Wd.×1 5/8″ Dp. U-shaped cutout and two V-blocks.

Optional ram extension insert set contains one each 3/8″, 1/2″, 5/8″, 3/4″, and 7/8″ dia. ram extension inserts and an adapter. All inserts are 2″ long.

Air-Powered Arbor Presses

Get more consistent pressure at a faster pace than manual presses. These air-powered presses are great for applications such as pressing, punching, and swaging. Presses have a fixed stroke length. Ram force can be adjusted by regulating air line pressure. Presses are made of steel and aluminum with a cast iron base. Rams are round and solid steel (no drilled or tapped holes). Change clearance over base plate by moving the cylinder up and down on the column. Presses require a minimum of 25-30 psi to a maximum of 120 psi air pressure to operate. Mounting holes and bolts included.

Single-Acting Presses— Spring returns ram to original position; use where a powerful or a controllable ram return is not needed.

Double-Acting Presses— Have a powerful and controllable air-actuated ram return. Use with heavy punches and dies where return action is required. 2373A21 comes with ram guides to prevent ram rotation.

Two-Hand Safety Control Kits with Double-Acting Press— In addition to one of the double-acting presses from above, these kits have a safety package that complies with OSHA regulations (operator must hit two controls simultaneously to operate). Plus, assembled on the press are the following accessories: a pilot-operated four-way valve, a filter, regulator, polyurethane tubing, and fittings. 2373A25 comes with ram guides to prevent ram rotation.

Hydraulic Floor-Mount Presses

A large working area under the ram allows you to easily position bulky work on these presses. Rams are steel.

Hand-Operated Presses

Economy Presses— Made of angle steel and have a hydraulic hand-operated jack mounted on the top cross member instead of a ram. The jack exerts pressure against the top cross member to drive the press plate downward. Press plate returns automatically via external return springs. Table can be raised and lowered by repositioning the movable supports in the vertical uprights. Include four drilled 1.6″×0.5″ mounting holes (fasteners not included).

Optional accessory kit for economy hand-operated presses includes one 9″ long V-block set, a V-pushing adapter, and ¾″ dia. and 1″ dia. pushing adapters.

Medium Duty Presses— Have structural steel frames with open sides for inserting long pieces. They also have a gauge for taking direct pressure readings. Rams are round with an adjustable extension screw that lowers ram to workpiece.

5-ton press includes a hydraulic cylinder with hand pump; pump handle; two table plates; and a 4 5/16″ OD; 0- to 12-ton pressure gauge. Raise and lower table by repositioning the movable locking bars in the uprights. Does not include mounting holes.

15-ton press is furnished with a hydraulic cylinder with hand pump; pump handle; two table plates; and a 4 5/16″ OD, 0- to 30-ton pressure gauge. Table can be raised and lowered by the hand crank. For added versatility, ram moves laterally up to 10 3/16″. Press has four ½″ dia. holes for floor mounting (fasteners not included).

Heavy Duty Presses— Constructed of welded reinforced steel channel and have a gauge for indicating direct pressure readings. A self-locking hoist raises and lowers table by means of a hand crank. Presses have a rapid ram return, which starts as soon as the release valve is opened. Ram is round and can be stopped at any point by closing the valve. Come with two table plates, two V-blocks, a flat ram nose, a pump, and a pump handle. Presses have four 17/32″ dia. holes for floor mounting (fasteners not included).

25-ton press includes a 4″ OD pressure gauge (0 to 25 tons). Work head is stationary.

50- and 75-ton presses include a V-ram nose and a 4″ OD pressure gauge (0 to 50 tons for 2374A2; 0 to 75 tons for 2374A3). Include movable roller-bearing mounted work head for off-center work (up to 20¾″ for the 50-ton model; 29⅝″ for the 75-ton model). Lock head in position with handwheel.

Electric Presses

Presses are steel channel with round rams and have one-hand ram positioning and pressure relief with a four-way valve hydraulic control. Cylinder is double acting and fixed between uprights. Removable table pins allow height adjustment. Include a 2½″ OD pressure gauge (0 to 2,500 psi for 23825A11; 0 to 3,200 psi for 23825A15); hydraulic pump; two pressing plates; a 1 hp, 1,725 rpm, 110 volt, 50/60 Hz, single-phase motor; and a 3½-ft. cord with three-prong plug. Presses have four 17/32″ dia. holes for floor mounting (fasteners not included).

25-ton press has a lifting chain.

Air-Powered Press

Press is steel channel with a round ram. Operated by an air-driven hydraulic foot pump that provides 10,000 psi @ 100 psi of air pressure. Comes with a 3½″ OD, 0- to 10,000-psi gauge; tee; and ¼″ ID×8-ft. hose. Has four 1.6″×0.5″ mounting holes (fasteners not included).

Optional accessory kit for air-powered press includes bearing pulling attachment, ¾″ dia. and 1″ dia. ram-pushing adapters, V-pushing adapter, a pair of 11½″ long V-blocks, ram-forcing cap, and threaded adapter.

Hydraulic Bench-Mount Press

The low height makes this press perfect for mounting on a workbench. Plus, a large opening under the ram makes the positioning of bulky work a snap. Press is steel and powered by a hydraulic hand pump with two speeds. Pump includes hose and fittings. Press has a steel frame and a round 1½″ dia. steel ram. Ram travel is 10⅛″.

Optional accessory kit includes two V-blocks, ½″ dia. and ¾″ dia. ram-pushing adapters, a V-pushing adapter, and a 1″-8 threaded adapter.

Laboratory Hydraulic Bench-Mount Presses

Powered by a hydraulic hand pump, these presses work well in applications such as compression molding, destructive testing, fluid extraction, pressure forming, and pelletizing. Presses are steel with a round steel ram. Ram travel is 5⅛″.

Presses have a safety shield with polycarbonate door and an easy-to-read 4½″ OD gauge that is calibrated for fast, accurate readout in pounds (from 0 to 24,000 lbs.) and in metric tons (from 0 to 11 tons).

Die Sets

Standard

Heavy Duty

Sets can be adapted for use with manual, mechanical, hydraulic, and air-operated arbor presses.

Standard— Made of steel. Excellent for assembly operations and light stamping work using the compact presses on page 2328. Also for use in punching, staking, and bending operations. Dies *with linear ball bushings* have smoother movement.

Heavy Duty— Made of hot rolled steel with hardened steel bushings. Ideal for heavy duty stamping applications as well as metal forming, staking, crimping, pressing, and punching. Base has two 25/32″ mounting slots (fasteners not included).

Sheet Metal Benders

Economy

Standard

Also known as press brakes, these benders easily mount to your bench top. Mounting fasteners are not included.

Economy— These extruded aluminum benders make clean, smooth bends up to 90°. Brake bar lets you form boxes, trays, and pans. Adjusts easily for stock thickness and angle of bends. Mount using the four 3/8″ dia. mounting holes.

Standard— Use these steel benders to form trays, rocker panels, duct work, and other shapes usually done by bigger units. They have a 4″ clearance for easy insertion and removal of awkward shapes. Toggle clamp system provides quick clamping. The bending edge has a machined surface for bending angles up to 135°. Front edge is removable for making bends that are close together.

Mount benders in a vise or bench mount using the four 27/64″ dia. mounting holes. *Optional floor stands,* sold separately, have four slots to accept benders and four 27/64″ dia. mounting holes for securing stand to floor.

Adjustable-Width Sheet Metal Benders

Bench Model Shown with Optional Floor Stand

48″ and 72″ Floor Models

Easily create boxes, trays, and pans by adjusting the width of these benders. Also known as press brakes or box- and pan-press brakes, they bend a variety of materials including mild steel, stainless steel, aluminum, and heavy plastic. Just position or remove sectional forming dies (fingers) to adjust width. Benders can then form the bends of all four sides of a box.

Benders have welded steel-plate body sections with heavy truss rods. Upper leaf and nose bar are adjustable for radius bending. Minimum reverse bend is 1/4″ except 2489A11, which is 5/16″. All (except 2489A11) include removable apron insert, apron stop rod, and counterweights.

Bench Models— For lighter gauge metals. These benders have a base with four 3/8″ dia. holes for bench mounting (fasteners not included). Handles have plastic grips. *Optional heavy-gauge steel floor stand* is sold separately below.

Floor Models— For heavier gauge materials. These benders have heavy duty bending-leaf support bushings and reinforced aprons and top leaves to minimize deflection. 48″ and 72″ models have four 9/16″ dia. holes for floor mounting (fasteners not included); 48 1/4″ model has four 5/8″ dia. mounting holes (fasteners not included).

Miniature Sheet Bender

Small but powerful, this mini sheet bender easily bends mild steel, stainless steel, aluminum, brass, styrene, and similar light sheet materials. Makes bends up to 90°. Made of aluminum with plastic hand knobs and a steel bending blade. Furnished with a reversible steel die. Simply tighten the press screws to change the degree of the bend. An adjustable depth guide simplifies duplicate bends.

Optional urethane dies will not scar material. Three urethane dies are required to replace one steel die.

Maximum Bending Wd.	Capacity: Mild Steel	Capacity: Stainless Steel	Capacity: Aluminum	Overall Size, Ht. × Wd. × Dp.		Each
3″	32 ga. (0.010″)	32 ga. (0.010″)	30 ga. (0.010″)	3½″ × 4″ × 1½″	2371A76	$47.94
Optional Urethane Dies (3/Pkg.)					2371A77	Pkg. $3.33

Sheet Benders for Plastic

These benders heat a narrow strip across a sheet of plastic to create a bendable section.

Bender for Acrylic Sheets

For Acrylic Sheets— Specifically designed for bending acrylic sheet. Simply lay a sheet over the heating element, wait three to six minutes for it to soften, and bend. Units have an on/off switch, pilot light, and a thermostat control with a dial numbered 0-6 (maximum temperature is 450° F). They also have a 6-ft. cord with three-prong plug and operate on 120 VAC. Housing is steel. CSA certified.

Bender for Thermoplastic Sheets

For Thermoplastic Sheets— Great for bending polyethylene, polypropylene, polycarbonate, PVC, CPVC, ABS, Kynar, Kydex, acrylic, and other types of thermoplastic. Just place your sheets between the two heating bars and heat until flexible. Heating can take from 30 seconds to 12 minutes. Each heating bar has a 6-ft. cord that plugs into the control box. The control box has a stepless, variable-heat controller; an 8-ft. cord with three-prong plug; and operates on 120 VAC. Maximum temperature is 400° F. Heating elements are replaceable. Made of aluminum. Use pieces of 2 × 4 (not included) to support sheets while heating.

The optional ***V-groove attachments*** create sharp, nonradius, 90° bends in polypropylene and polyethylene by melting a deep groove into the material. Bend at the groove to form the angle. A contact weld is left along the groove reinforcing the inner joint. Made of aluminum.

Maximum Bending Wd.	For Sheet Thickness	Watts	Overall Size, Ht. × Wd. × Dp.	Bender		Opt. V-Groove Attachment

Combination Sheet Bender, Roll Former, and Shear

Get three machines in one—sheet bender (press brake), roll former (slip roll), and shear. Made of heavy cast iron, this right- or left-hand operated machine includes a spring-loaded work hold-down and guards for the slip roll. Overall size is 28″ Ht. × 42½″ Wd. × 21½″ Dp. Base has four ⅜″ dia. holes for floor mounting (fasteners not included).

Sheet Bender (Press Brake)—Makes up to 30″ long bends in 20-ga. (0.0359″) mild steel, 24-ga. (0.0239″) stainless steel, and 15-ga. (0.0571″) aluminum. Includes a set of six removable forming dies (also called fingers) that are 4⅜″ long and have widths of 1″, 2″, 3″, 6″, 8″, and 10″. Also has one nonremovable ¾″ Wd. × 30″ Lg. V-die. Makes a ⅜″ minimum reverse bend and a 90° maximum angle.

Roll Former (Slip Roll)—Roll is 1½″ Dia. × 30″ Lg. with ⅛″, 3/16″, and ¼″ dia. wire-forming grooves. Rolls mild steel up to 20 ga. (0.0359″). Minimum forming radius is ¾″.

Shear—Cuts up to 30″ wide, 20-ga. (0.0359″) mild steel or equivalent. A gauge in the back adjusts from 1″ to 16″. Remove gauge to cut sheets of any length. Includes a reversible dual-edge blade for longer life.

2384A72 ..... $1,320.05

Roll Formers

Heavy Duty

Also known as slip rolls, these formers create a variety of rolled metal shapes—from reverse curves and radius bends to perfect circles. All slip rolls can be mounted on a bench or table. Mounting hardware not included.

(A) Light Duty— Has a machined aluminum frame, three ground and polished steel rollers, knurled head-screw adjustments, gear covers, a work release cam, and side supports. Rollers are 1″ dia. Minimum bending radius is ½″. Base has two ¼″ mounting holes.

(B) Heavy Duty— Have rigid cast iron frame, fully enclosed steel gears, and three ground steel rollers. Grooves in one roller enable them to form wire as well as sheet metal. Lift the top roller with the handle to remove material easily. Rollers are 2″ dia. Minimum bending radius is 1″. Base has four 7/16″ mounting holes.

(C) High-Capacity Gear Drive— Has a rigid cast iron frame, fully enclosed steel gears, and three ground steel rollers. A 4:1 gear ratio makes turning easier than other roll formers, particularly with thick materials. It has 3″ dia. rollers, a minimum bending radius of 1½″, and four ½″ mounting holes.

	Max. Bending Wd.	Capacity: Mild Steel	Capacity: Stainless Steel	Capacity: Aluminum	Wire Grooves, dia.	Overall Size, Ht. × Wd. × Dp.

Rotary Edge Former

With a simple roller change, you can turn, crimp, bead, edge, and perform many other forming tasks. Tool can form 24-ga. (0.0239″) mild steel; 26-ga. (0.0179″) when crimping. The distance between roller centers is 2″. Frame is cast iron; rollers are steel. A C-clamp mounting base attaches to work surfaces from 1½″ to 2½″ thick. Includes rollers for ⅛″ turning, burring, crimping, wiring, and ¾″ ogee beading, plus all required gauges. Additional rollers sold separately.

Forming Machine

Throat Dp.	Overall Size, Ht. × Wd. × Dp.		Each
7″	24″ × 4″ × 16″	2435A74	$1,043.55

Additional and Replacement Rollers

⅛″ Turning 2435A75 ... Pair $102.11

Crimping 2435A88 ... Pair $128.00

Wiring 2435A76 ... Pair $102.11

Offset 2435A81 ... Pair $226.17

Burring 2435A77 ... Pair $102.11

Elbow Edging 2435A91 ... Pair $102.11

¼″ Single Beading 2435A79 ... Pair $113.97

¾″ Ogee Beading 2435A89 ... Pair $113.97

Combination Crimping and Beading Machines

Crimp and bead at the same time. These machines have crimping and ogee beading rolls that do both with one pass. Plus, you can adjust for deep or shallow beading and for "fade-away" crimping. Replace the beading rolls with spacing collars (included) for applications that only require crimping. A quick-acting crank screw raises and lowers the upper roll. Frame is cast iron. Distance between roll centers is 1¾″. Roll length is 1¾″.

Includes a throat gauge, a wrench, one pair each of crimping and ogee beading rolls, a pair of spacing collars, and a C-clamp mounting base (for ½″ to 2½″ bench thicknesses).

Capacity: Mild Steel	Capacity: Stainless Steel	Capacity: Aluminum	Overall Size, Ht.×Wd.×Dp.

Radius Forming Tools

Easily turn an angled strip of sheet metal with a 90° bend into a curve. These tools can form a radius as small as 3″ and will curve angles on sheet metal as wide as 2″ and as deep as 8″. Perfect for forming angle rings for the top of a drum or other container, for joining pieces of round duct, or for other similar applications. Both tools are hand operated, made of cast iron, and provide a leverage ratio of 45:1 to either shrink or stretch metal into your curve.

They form up to 18-ga. (0.0478″) mild steel, 20-ga. (0.0359″) stainless steel, and 16-ga. (0.0598″) aluminum. Jaws are hardened alloy steel and reversible for longer life. Tools have two ⅜″-16 threaded holes for bench mounting (fasteners not included) or can be mounted in a vise.

Shrinker— Contracts sheet metal for inside curves; makes rings that fit around outside of drum.

Stretcher— Expands sheet metal for outside curves; makes rings that fit around inside of drum.

	Complete Tools	Each	Sets of 4 Repl. Jaws	Set
Shrinker	2452A11	$271.38	2452A13	$121.25
Stretcher	2452A12	271.38	2452A14	121.25

Sheet Metal Forming Hand Tools

(A) Compound-Leverage Seamer— This nickel-plated steel tool is designed to deliver more power with less effort. Jaws are drop-forged steel and notched in ¼″ increments to measure depth. Handles are hardened steel with cushioned grips.

(B) Compound-Leverage Seamer with Offset Handles— Same as *Style A* above, but with offset handles that allow you to work at awkward angles. Jaws are heat-treated alloy steel.

(C) Rounded-Jaw Seamer— Jaw shape prevents tears in aluminum and other light metals. Drop-forged steel with cushioned handles.

(D) Air-Powered Lock Seamer— Hammers down tight, uniform lock seams at a rate of approximately 15 feet per minute. Use on sheet metal from 30 to 18 ga. (0.0120″ to 0.0478″) without making adjustments for thickness. Operating pressure is 60 to 80 psi. Hose connection is ¼″ NPT female. Made of heat-treated alloy steel.

(E) Vise-Grip Sheet Metal Tool— Locks on to make bending and crimping easier. Use lever for quick release. Made of nickel-plated alloy steel.

(F) Five-Blade Pipe-End Crimper— Crimp and join the same size corrugated, round, and square sheet-metal pipe. Jaws have leverage action for more power with less effort; marks at ¼″ increments measure crimp depth. Made of cold-rolled, low carbon steel; spring-return cushioned handles.

(G) Snap-Lock Joining Punch— Creates a ⅜″ long louver-shaped edge on a piece of metal. The raised edge locks into the rolled edge of another piece of metal, eliminating the need for a second tool. Joins 28- to 24-ga. (0.0149″ to 0.0239″) sections of sheet metal, duct, and pipe. Nickel-plated steel with forged steel jaws and cushioned handles.

(H) Snap-Lock Joining Punch with Adjustable Depth Gauge— Same as *Style G* above, but adjusts to allow different throat depth settings.

	Throat Dp.	Jaw Wd.	Overall Size		
A	¼″-1¼″	3¼″	8″ Lg.	8763A11	$68.07

H	¼″-⅝″	½″	8″ Lg.	8752A42	45.40

Combination Press, Shear, and Punch

Meet all your metalworking needs with one machine. Often called a 40-ton metalworker, this electrically operated hydraulic machine presses mild steel and shears ⅜″ Thick.×4″ Wd. to ¼″ Thick.×6″ Wd. sheets and ¾″ dia. rods. It can also bend and form with the optional sheet bender, notch with the optional notcher, and punch with one of the optional punch sets.

Throat depth is 3¾″. Overall size is 55¼″ Ht.×30″ Wd.×24″ Dp. Base has four 9/16″ mounting holes (fasteners not included). Includes a 5-ft. cord with three-prong plug; runs on 110 VAC. Safety guard complies with ANSI B11-5 standards.

Optional 8″ sheet bender bends up to ¼″ thick mild steel. Maximum bend width is 8″. ***Optional notcher*** makes ¼″×2″×1¾″ notches.

Optional Punch Sets— Punch up to 1″ dia. or 1″ sq. in ⅜″ mild steel. **To Order:** Please specify size, ¼″ to 1″ in 1/16″ increments. Include punch and die.

Metalworker	24695A11	$3,036.23
Optional 8″ Sheet Bender	24695A12	619.40
Optional Notcher	24695A13	619.40
Optional Round Punch Set	24695A14	50.91
Optional Square Punch Set	24695A16	132.73

Contour Forming Wheel

Forming Wheel with Optional Floor Stand

Also known as an English wheel, this machine creates curves in up to 18-ga. (0.0478″) mild steel, 11-ga. (0.0907″) aluminum, copper, brass, and some stainless steel. Metal is stretched as it passes between the upper and lower wheels. The lower wheel, often called the anvil wheel, is curved to produce contoured shapes in metal. Ideal for auto body components, shrouds, covers, fuel tanks, doors, and more. The lower wheel has a 3¼″ radius. Use the optional wheels sold separately to create tighter or flatter contours; the larger the wheel radius, the flatter the contour. Overall size is 29″ Ht.×27″ Wd.×8″ Dp. Throat depth is 22″.

Unit has welded steel construction and can be bench mounted or clamped to a vise. It has four mounting holes for ½″ bolts (bolts not included); mounts to optional floor stand.

Contour Forming Wheel	2468A11	$744.64
Optional Floor Stand (26¾″ Ht.)	2468A47	230.77
Optional 2½″ Radius Lower Wheel	2468A48	106.15
Optional 5″ Radius Lower Wheel	2468A34	106.15
Optional 8½″ Radius Lower Wheel	2468A35	106.15

● Has two horns. ♣ Surface-hardened forged steel. ♦ Cast steel.

Miniature Wire Bender

At only 4¾″ Lg.×1″ Wd., this bender can easily be clamped in a vise or mounted to a workbench with its two ¼″ holes (fasteners not included). Create angles, curves, and eyes by changing the arrangement of pins. Handles steel and softer metal wire up to ¼″ in diameter. Includes three bending pins. Made of die cast aluminum.

2379A11 ..... $8.88

Wire, Rod, and Flat Stock Benders

Economy Bender

Standard Bender

Create braces, hooks, eyes, loops, brackets, and pipe hangers. Benders can be clamped in a vise.

Economy benders bend wire and rod up to ⅜″ dia. and flat stock up to ½″×3/16″. Both are aluminum. *Small diameter* includes ½″, ¾″, 1″, 1¼″, and 1½″ dies. Handle is 12″ long. Base is 3″×3″. *Large diameter* includes ⅜″, ¾″, 2″, 3″, and 4″ dies. Handle is 16″ long. Base is 4″×6″.

Standard bender bends wire, rod, and rebar up to ⅝″ dia. and flat stock up to ¼″×1″. Change sleeves for eye-diameter and radius bends—¾″, 1¼″, and 1⅝″ sleeves are included. Overall size is 19¼″ Lg.×2″ Wd.×5½″ Ht. Made of steel.

Small Diameter Economy Bender	**2460A16**	$44.44
Large Diameter Economy Bender	**2460A18**	69.00
Standard Bender	**2460A11**	75.72

Wire Bender for Complex Shapes

Forming wire and flat metal into complex shapes couldn't be easier. This compact steel bender makes bends on multiple planes, S-shapes, squares, coils, and more. Use with wire and rod up to 5/16″ dia. and flat stock up to 1″ Wd.×⅛″ Thick. Can be clamped in a vise or bench mounted with the two 5/16″ dia. holes (fasteners not included).

Bender includes 3/16″, ¼″, ½″, and 1″ dia. circle pins; one sharp-angle die; a form pin follower; a bending gauge; and a 1-ft. long handle. It measures 9½″ Lg.×2½″ Wd.×3½″ Ht. (not including handle).

Expand your bending capabilities with the optional ***edge bender kit***. It adds edgewise bending capability (for ductile materials up to 0.12″ thick and ¾″ wide).

Use the ***optional circle pins*** to create large diameter circles.

Bar, Pipe, and Tube Benders

These versatile tools can bend flat bar stock, angle iron, round and square pipe, tubing, and conduit. Angles up to 180° can be easily and accurately duplicated using set stops. Benders include a set of general purpose dies for cold-bending Schedule 40 pipe and hot-rolled, low carbon steel bar stock and tubing. Made of steel.

Conduit Benders

Benders meet National Electrical Code (NEC) specifications for conduit bending. Heads and handles sold separately.

Conduit Bending Heads—Degrees are marked for 10°, 22°, 30°, 45°, 60°, and 90° angles. A star, an arrow, and a rim notch are also marked to align conduit for accurate stub, offset, saddle, and 90° bends. Markings are easy to read and cast on both sides of the bender. Aluminum heads are lighter and more corrosion resistant than cast iron heads.

Short-Radius Bending Heads—Also known as hickey benders, they're ideal for making short-radius bends.

Handles—Handles are labeled with a bending guide. Made of tempered steel.

Conduit Benders for Offset Bends

Just insert conduit, depress handle, and release. These tough benders produce identical offsets in EMT conduit every time. Bending heads are made of aluminum alloy and have two 5/16″ dia. holes for bench mounting (fasteners not included). Furnished with a 22″ long steel handle with a cushioned grip. Overall length is 27¼″.

For ½″ EMT Conduit	**2458A1**	$235.49
For ¾″ EMT Conduit	**2458A2**	346.62

Multisize Conduit and Pipe Benders

Now you only need one bender for different sizes of conduit and pipe. These handy tools not only bend several sizes, but have ratcheting action for increased leverage and productivity—there's no need to reposition your conduit or pipe for multiple bends. Plus, with two 8″ dia. plastic wheels you can take them anywhere. Body and bending heads are steel.

They have a scale marked for 30°, 45°, 60°, and 90° angles. Handle is not included; use your own 3- to 4-ft. length of 1″ OD pipe or rigid conduit. Use benders with IMC conduit and ½″ to 1½″ rigid pipe (Schedule 40). 2412A11 can also bend EMT conduit.

Note: Not for use on Schedule 80 pipe.

Hydraulic Benders for Rigid Conduit

These lightweight aluminum tools are both powerful and portable. Bending mandrels are included in a variety of conduit sizes. Not for use with EMT or IMC conduit.

Segment Bender— Also called a sweep bender, this tool forms curves by making a series of small bends, enabling you to incrementally adjust a curve to fit a specific application. Create up to a 90° radius in 1¼″ to 4″ dia. rigid steel and rigid aluminum conduit. Powered by a two-speed hand-operated hydraulic pump. Comes in a 48″ Lg.×18″ Wd.×18″ Ht. steel storage case.

One-Stroke Benders— These benders make uniform 90° bends in 1″ to 2″ dia. rigid steel conduit with one stroke of the ram. Each comes in a 25⅞″ Lg.×24⅝″ Wd.×7⅜″ Ht. steel storage case.

The *electric* bender has a powerful single-phase, ½ hp motor that operates on 120 VAC, 50/60 Hz. It includes an 8-ft. cord with three-prong plug.

Benders for PVC Conduit and Pipe

Heating Blanket

Heater

Portable and simple to use, these benders heat PVC conduit and pipe, making it pliable enough for you to bend by hand.

Electric Heating Blanket— Just wrap it around the pipe and secure it with the hook-and-loop strap. Evenly heats any schedule of ½″ to 1½″ dia. PVC conduit and pipe. Blanket measures 13″ Lg.×8¼″ Wd. and has a woven glass exterior and a silicone vinyl interior. Includes an 8-ft. cord with two-prong plug. Operates on 120 VAC. Reaches temperatures over 300° F.

Electric Heater— The open-end design of this heater lets you work on any length of pipe. A pair of rollers at each end aligns the pipe so it heats evenly. Accommodates Schedule 40 to 80 PVC conduit and ½″ to 2″ dia. pipe. Includes a bending guide that adjusts from 0° to 90° in any radius from 6″ to 12″. It has an on/off switch with indicating light and a carrying handle and latch on the cover. Includes a 12″ cord with three-prong plug. Operates on 115/120 VAC. Overall size is 29½″ Lg.×7″ Wd.×7⅛″ Ht. Housing is steel. Maximum temperature is 450° F.

Electric Heating Blanket	**3236A66**	$227.71
Electric Heater	**8756A14**	679.40

Spring Tube Benders

Simple yet effective—just slip over aluminum, copper, and other thin-wall tubing to eliminate crimping and collapsing when hand bending. Made of oil-hardened spring steel with zinc-plated finish.

Small Diameter Multisize Tube Bender

Bend four sizes of copper tubing (3/16″, ¼″, 5/16″, and ⅜″ OD) and three sizes of steel tubing (3/16″, ¼″, and 5/16″ OD). Works on fuel, brake, and hydraulic lines. To use, clamp the bender in a vise or hold one end of the tubing stationary. Bends up to 135° in a single motion. Bender is steel with a nylon mandrel to prevent kinking and flattening. Length is 4″.

2478A12 ..... $21.00

Tube Benders for Soft and Hard Metals

Adjustable Bender

The lever-action design allows you to make accurate bends in one continuous motion with significantly less effort than other hand benders. Use to create bends in steel, stainless steel, titanium, and other hard metal tubing. Bend up to 180°.

Standard— Built-in rollers never lose contact with the tube, which virtually eliminates out-of-plane bends. Two-stage handle lets you stop mid-bend and reposition for better comfort and control. Benders are ductile iron (unless noted).

Adjustable— You can adjust the calibrated face plate to compensate for spring-back, adjust the top handle to minimize flattening, and fine tune the clamping hook so it holds the tube snugly. Rollers are self-aligning to eliminate scoring, and an offset handle reduces bending effort. Benders are steel. Meet ANSI and ASME Boiler and Nuclear Standards: ASME 3; ANSI B31.1.

One-Hand Tube Benders for Soft Metals

So easy to use, you only need one hand to operate these benders.

Compact Bender with Mandrels

Includes a bender and four mandrels (sizes ¼″, 5/16″, ⅜″, and ½″) in a plastic carrying case. Individual mandrels are also sold separately.

2430A32 ..... $290.35

Bender Kit

Everything you need to make 90° bends in soft copper tubing from ⅜″ to ⅞″ OD. Bender is steel, 12½″ long, and has angle marks that guide you when bending tubing. In addition to the bender, kit includes the following tools: a steel tube cutter for ⅛″ to 1⅛″ OD tubing; a tube reamer; ⅜″, ½″, ⅝″, ¾″, and ⅞″ mandrels; and a plastic carrying case.

2454A11 ..... $191.91

Compact Bender

At just 6″ long, this bender makes it a cinch to form 0° to 90° inline bends in confined spaces. It'll bend aluminum and soft copper tubing from 3/16″ to ½″ OD and soft steel tubing from 3/16″ to ⅜″ OD. Made of steel. Mandrels are sold separately below.

2430A6 ..... $130.00

Tube Benders for Soft Metals

Slip one of these open-sided tools over soft metal tubing, position it for the best leverage, and create a bend in one continuous motion. Tools have incremental calibration marks (unless noted) so you can be sure of the accuracy of your angle. Use on brass, aluminum, steel, stainless steel, and soft copper tubing (unless noted). Benders are steel (unless noted).

90° Multisize—*Triple-head benders* can bend more than one size of tubing without adjustments to the bending head. They bend up to 90°.

180° Single Size— Each of these benders works on one size of tubing. They have a wide (fixed) hook that holds the tube securely while you bend. They bend up to 180° and conform to Fed. Spec. GGG-B-191A, Type III, Class 2.

180° Multisize— Bend up to 180° (unless noted). *Triple-head benders* bend different tubing sizes without adjustments to the bending head. *Note:* Use the 1/4″ groove for both 1/4″ and 3/16″ tube OD. *Wide-range bender kits* include a bender that quickly adjusts to bend different sizes of tubing with the change of a mandrel. Kits also come with an assortment of mandrels that fit a variety of tubing sizes and a steel carrying case. Meet Fed. Spec. GGG-B-191A Type III, Class 1 (unless noted).

Benders for Thick-Wall Tubing

Ratcheting action and leverage give these tools the strength to bend thick-wall tubing without heating or tempering. Use for steel tubing with up to a 1/8″ wall thickness, stainless steel tubing with up to a 3/32″ wall thickness, as well as Types K and L hard-copper water tubing. Bend tubing up to 180° in one continuous motion. Made of aluminum.

Easy-Use Precision Tube Bender for Hard Metals

Make smooth bends in mild steel, chromemoly, bendable grades of aluminum, Type 303 stainless steel, and DOM (drawn over mandrel) steel. Forms 90° bends in 2 steps; 180° bends in 3 1/2 steps. Can make either right or left-hand bends. Bender and mandrels are made of steel. Can be bench mounted. ***Bender*** includes a degree indicator wheel and a 36″ telescoping handle.

Optional pedestal is made of steel and has four 1/2″ bolt holes.

Precision Tube Bender for Soft and Hard Metals

Bender with Slide Bar and Mandrel

A slide bar keeps the tube round for precise bends. To bend, simply crank the revolving hand lever and the enclosed gear with a 50:1 leverage ratio creates a lot of force with minimal effort. Bend both soft and hard metal tubing, including hard and soft copper, aluminum, brass, thin-wall steel, stainless steel, Monel (nickel-copper alloy), titanium, and even aircraft-grade high-strength stainless steel. Create bends up to 180° in one continuous motion. Clamp in a vise or mount to a bench using the two 3/8″ threaded holes (fasteners not included).

A complete tool requires a bender, a dual-style slide bar, and a bending mandrel (slide bar and mandrel need to have matching tube ODs).

Complete Tube-Bending Kit

Includes the *bender* and all of the *slide bars* and *mandrels* listed below for bending 1/4″ to 3/4″ OD tubing. Comes in a steel carrying case.

2487A35 ..... $1,880.18

Individual Bender

Does not include slide bar or mandrel. Made of steel and is 16 1/4″ long. Comes in a steel carrying case.

Tube Flaring Tools

Flaring tools create a funnel shape at the end of tubing so it can be used with 37° or 45° flared fittings. All tools are steel (unless noted). Use *flaring tools for soft metals* on copper, brass, aluminum, and soft steel. *Flaring tools for hard metals* can be used on 1/8-hard and annealed stainless steel as well as titanium. *Note:* Type M hard copper should be torch annealed before flaring.

★ Tool is steel with an aluminum bar.

Tube Expanders

Join tubing of the same size without fittings. Expanders enlarge the end of a piece of tubing so another piece can slip into it, making soldering and sealing with adhesives easier. They're made of aluminum and have plastic handle grips. Expanders measure 16" long and include durable stainless steel expansion heads that ensure precisely rounded tube openings. Use on soft copper, aluminum, and steel tubing with a wall thickness up to 0.063". Include a metal carrying case.

Complete Expanders

Expander Heads Included		
1/2", 5/8", and 7/8" Tube OD Sizes	2637A12	$359.72
3/8", 1/2", 3/4", and 1" Tube OD Sizes	2637A42	423.07

Tube Flaring and Expanding Tools

Flaring and expanding tubing couldn't be easier. These tools include everything you need for flaring and expanding a variety of tubing diameters. Tools flare the end of a piece of tubing to create a funnel shape so that it can be used with 37° or 45° flared fittings. They also expand, or swage, the end of a piece of tubing just enough so another piece with the same diameter can slip into it. All tools are steel.

Tool for soft metals is designed for use with copper, brass, and aluminum. Mount tool in a vise or to a bench with the two 5/16" dia. mounting holes (fasteners not included). Includes six expanding adapters, 37° and 45° flaring cones, six flaring adapters, and two Allen wrenches.

Tool for soft and hard metals expands soft copper, aluminum, and brass. Designed for 37° or 45° flaring of soft copper, brass, aluminum, steel, and stainless steel, and for 45° double flaring of soft copper, aluminum, and steel. This tool can be hand held or vise mounted. Includes a yoke assembly, hex socket, 3/8" square drive ratchet wrench, seven expanding adapters, 37° and 45° flaring cones, seven double-flaring adapters, and a plastic carrying case. *Note:* Type M hard copper should be torch annealed before flaring.

● Will not expand or double flare 1/8" or 7/16" OD tubing.

Metal Tube Cutters

Cutters have dual rollers with a groove (unless otherwise stated) for cutting off flared tube ends.

Cutters with Enclosed Adjustment Screw

Prevent damage to the adjustment screw from chips and debris.

(A) Compact Tube Cutters— A small swing radius lets you cut tubing in tight spaces. 2764A12 has a 1¼″ swing radius and smooth dual rollers. 2764A14 has a 1 11/16″ swing radius. 2764A13 has a 1 15/16″ swing radius.

(B) Economy Tube Cutter— A good general purpose cutter.

(C) Premium Tube Cutters— Have a precision mounted cutting wheel for more accurate cuts and an adjustment screw with steel bearings for smooth operation. Body is chrome plated. Include a fold-away deburring reamer with file and an extra cutting wheel.

(D) Tube Cutter and Constrictor— In addition to cutting tubing, this tool crimps tubing to reduce its size. Includes two cutting wheels, one crimping wheel, and a fold-away deburring reamer.

(E) Quick-Adjusting Tube Cutters— An enclosed ratchet feed opens quickly to insert tubing; instantly slides to cutting position. Include an extra cutting wheel. 2708A2 has four extra-wide grooved rollers; *A3* has two extra-wide grooved rollers.

C-Frame Cutters

(F) Economy C-Frame Tube Cutter— Includes a fold-away deburring reamer.

(G) C-Frame Tube Cutters— All have an extra-heavy cast frame for extended life and a fold-away deburring reamer, except 2670A5, which does not have a reamer and has an aluminum frame. 2670A1, A2, and A3 have rollers that are not grooved.

★ Does not cut titanium. Comes with two wheels.

Metal Tube Cutters for Tight Spots

(H) Ratchet Tube Cutters— Ratchet action permits cutting in cramped areas. Cutters are aluminum-zinc alloy with a high-impact nylon fiberglass handle and a smooth roller. Also cut plastic and PVC tubing; when used with a *heavy duty cutting wheel* (sold separately) cutters can cut thin-wall steel and stainless steel.

(J) Spring-Loaded Tube Cutters— A spring-loaded cutting wheel automatically tightens as you turn these cutters. All have a plastic body, except 27005A31, which is zinc-plated steel. *Optional ratchet handle* provides extra leverage.

Corrugated Stainless Steel Tube Cutter

This cutter has two sets of guide wheels that ride in the corrugations for stability so you get clean, precise cuts in 3/8″ to 1″ OD corrugated stainless steel tubing. Cutter is cast aluminum with a steel cutting wheel. It's 8¾″ long when opened and 7″ long when closed.

Cutter	3241A16	$60.72
Replacement Wheel	2757A29	6.77

Flexible Hose and Tube Cutters

Mini Cutters

With Lanyard

Have a hardened steel blade mounted to a sturdy plastic spring-action frame. For soft rubber and plastic hose and tubing. Cutting capacity is 1/8″ to ¾″ OD. Overall length is 3″.

Cutter with Lanyard	8288A52	Each	$15.77
Cutter without Lanyard	8288A51	Each	$7.00
Repl. Blades (5/Pkg.)	8288A54	Pkg.	$12.40
Repl. Blades (10/Pkg.)	8288A53	Pkg.	$20.00

Snap-Back Safety Cutter

Has a plastic frame and an enclosed, spring-loaded stainless steel blade for safe, clean cuts. For soft rubber and plastic hose and tubing. Maximum cutting cap. is 1″ OD. Overall length is 8″.

Cutter	8337A1	$23.37
Repl. Blade	8337A3	11.63

Bench-Mount Cutter

Has an aluminum frame with four 9/32″ mounting holes (fasteners not included). Blade is hardened steel. For soft rubber and plastic hose and tubing. Cutting capacity is 1/8″ to ¾″ OD. Overall length is 9½″.

Cutter	3676A11	$79.76
Repl. Blade	3676A12	20.64

Plastic Pipe, Hose, and Tube Cutters

Lightweight Pipe, Hose, and Tube Cutters

Cut PVC and polyethylene pipe and tubing, and rubber hose. Cutters are nylon with a black antistick steel blade (unless noted). 3691A55 has a three-position blade.

Cutting Capacity: Plastic Pipe Size	Hose and Tube OD	Lg.	Cutters		Repl. Blade	
1″	1¼″	8 3/16″	3691A39	$17.85	3691A19	$6.04

2⅛″	2½″	17¼″	8336A12	127.78	8336A22	39.54

Pistol-Grip Ratchet-Action Pipe Cutter

The pistol grip lets you more easily and comfortably cut; the ratchet action increases leverage. Cut Schedule 40 CPVC pipe. Cutter is cast aluminum with a stainless steel blade. Cutting capacity is 1⅝″ for plastic pipe. Overall length is 8¼″.

Cutter	24875A75	$64.13
Repl. Blade	24875A77	20.91

Polyethylene (PEX) Tube Cutters

Quickly and easily cut cross-linked polyethylene, or PEX, tubing with one or two twists. Plus, these cutters automatically adjust pressure during cutting to prevent distorting the tube end, so it's easier to attach fittings. Cutters are plastic with a steel cutting blade.

Cutting Cap., Plastic Tube Size	Size, Dia. × Wd.	Cutters	Each	Repl. Blades: Pkg. Qty.	Pkg.

Plastic Pipe and Tube Cutters

Standard *Quick Adjust*

Standard Cutters—Cut PVC, polyethylene, and most plastic pipe and tubing. Cutters have dual rollers to keep tubing aligned, fingertip control for adjusting to tube size, a cast aluminum frame, and a steel cutting wheel. The adjustment screw is enclosed to prevent damage from chips and debris.

Quick-Adjust Cutters—A fast-acting release lever lets you instantly open cutter to maximum size, then just push the handle to quickly slide the cutting wheel to pipe. Extra clearance is built in to keep pipe from hitting the frame. Cutters have dual rollers to keep pipe and tubing in perfect alignment for a precise cut, a cast aluminum frame, and a steel cutting wheel for ABS, polyethylene, and other rigid plastic pipe and tubing. ***Cutting wheels for PVC*** are sold separately.

Pipe Cutters for Tight Spots

Ratchet Action *Four Wheel*

Ratchet-Action Cutter—Requires only 10° of handle swing to complete a 360° cut; swings a full 360° if desired. Cuts semirigid plastic pipe (such as ABS, PVC, and polyethylene) and Schedule 40 and 80 steel pipe. Also cuts plastic, copper, brass, aluminum, and galvanized steel tubing. Cutter is cast aluminum with a hardened steel cutting wheel.

Four-Wheel Cutters—Require just a 90°-110° handle swing and 4″ clearance around the pipe. They have an iron frame that opens to fit around pipe and four heat-treated steel wheels for cutting steel pipe.

Pipe Cutters

Economy Single Wheel— Comes with a cutting wheel for iron pipe, stainless steel and copper tubing, thin wall conduit, and PVC pipe.

Ridgid— These heavy duty cutters come with a cutting wheel for steel pipe and have an iron frame for exceptional durability. Use ***single-wheel*** cutters where cutter can make a complete turn. 2679A65 has extra-wide rollers that resist wobbling for straight, clean cuts. ***Four-wheel*** cutters are great when only a half turn is possible. 2679A7 has an extra-short handle for spots where you can't make a half turn.

Glass Cutters

Standard Cutters— Designed for smooth, flake-free glass cutting. Cutters have a die cast zinc handle with a ball end, except 3867A11, which has a straight handle with no ball. Overall length is 5 1/8″. Carbide wheels last up to 10 times longer than steel.

Easy-Cut Cutters— A reservoir in the handle provides automatic oil-feed to keep the cutting wheel blade sharp longer and make cutting easier. Cutting oil sold separately. Cutters have a swivel head with cutting wheel. The *straight handle* is brass and 6 3/4″ long. The *pistol-grip handle* is plastic and 6″ long. *Optional thinner pattern-cutting wheel* is for more intricate work.

♣ Not for stainless steel.

Glass Tube Cutters

Cut glass, porcelain, and other brittle tubing.

Pliers-Style Cutters— Just wrap cutter chain around the tube, then squeeze the handles while rotating the tube. Cutters have one steel and one aluminum handle, except 3655A13, which has steel handles with plastic grips.

Compact Fingertip Cutter— Apply fingertip pressure while rotating the tube. Cutter is spring loaded and made from die cast zinc with a replaceable steel cutting wheel.

Cutting Capacity, Tube OD	Overall Length	Cutters	Each	Replacement Wheels/Chain	Each

Glass and Ceramic Tile Cutter

Score glass and ceramic tile easily. This pistol-grip cutter has a die cast zinc handle and includes a carbide tile-cutting wheel. Cutting wheels for glass are sold separately. *Carbide wheels* last 10 times longer than steel.

For Cutting	O'all Lg.	Cutting Cap., Material Thick.		
Cutter				
Ceramic Tile	6 1/2″	0.030″-0.090″	**3943A11**	$33.64

Single-Strength Glass		0.125″-0.250″	**3943A33**	22.31

Ceramic Tile End Cutter

Also known as nippers, this end cutter is great for cutting standard thicknesses of ceramic tile. Cutter has a handle spring for repetitive cutting and handle stops that keep jaws from damaging each other. Made of steel with plastic-coated handles and durable carbide jaw inserts.

Overall Length	Jaw Wd.	Cutting Cap., Material Thick.		
8″	13/16″	5/16″	**3736A12**	$29.81

Breakaway-Blade Circular Gasket Cutter

When the blade gets dull just snap it off for a new, sharp one. This cutter is mounted on a radius bar for precision. Excellent for cutting gasket material, thin plywood, carpet, leather, and cardboard. Also good for scoring wallboard. Cuts 2 13/16″ to 12″ diameter circles. Maximum depth of cut is 3/4″. Includes one blade with eight snap-off points.

Cutter	24555A7	Each	$36.18
Repl. Blades (10/Pkg.)	38505A22	Pkg.	$7.89

Ceramic and Flexible Tile Cutters

Ceramic Tile Cutter

Flexible Tile Cutter

Ceramic Tile Cutters— Score and break tile without repositioning. Base is aluminum alloy with an inch-graduated rule. *10″ cutter* includes a steel six-wheel turret assembly and scores tile up to 1/2″ thick. *16″ cutter* includes a carbide wheel assembly and scores tile up to 1 1/2″ thick.

Flexible Tile Cutter— Cut flexible (resilient) floor tile up to 1/4″ thick. For asphalt and vinyl composition, solid vinyl, linoleum, felt-backed vinyl, and marble-chip epoxy tiles. Cutter has a gauge for making accurate 45° and 90° cuts, a steel blade, an aluminum alloy base with inch/metric graduations, and three 1″ dia. ball casters.

Cutting Length Straight	Cutting Length Diagonal	Lg. × Wd.		
Ceramic Tile Cutters				
10″	6″	15″ × 15″	3826A2	$94.72

Flexible Tile Cutter				
12 1/4″	—	18 1/2″ × 18″	3825A11	271.39

Circular Gasket and Washer Cutters

Cut leather, rubber, cork, graphite, and other soft materials. Styles A and B simultaneously cut inside and outside diameters.

(A) Standard Dual-Blade Cutter— Has steel blades, a 5/16″ square shank, and a steel cutter bar with a graduated scale from 5/8″ to 6 1/2″. Use in a bit brace or hand-powered tool only.

(B) Wide-Range Dual-Blade Cutter— Also cuts 2-3 mil thick copper. Has steel blades, a 1/4″ tapered shank, and a steel cutter bar. Use by hand, in a bit brace, or in a drill press.

(C) Wide-Range Single-Blade Cutters— Include two steel knife blades with blade holder, two center points with holder, and a hex wrench. Use by hand only; do not use in a bit brace, hand drill, or drill press.

The *2″-70″ capacity* cutter has dual bars for rigidity.

	Cutting Cap., dia.	Bar Length	Max. Material Thick.	Cutters	Each	Repl. Blades	Pair
A	5/8″- 6 1/2″	6 1/2″	1/4″	36795A11	$27.60	36795A12	$3.68
B	1″ -24″	13 1/4″	1/8″	3077A11	88.14	3077A21	53.66
							Each
C	1″ -22″	12″	1/8″	3857A11	30.11	3857A21	$5.34
C	2″ -70″	36″	1/8″	3857A12	59.01	3857A21	5.34

Circular Gasket Cutters

Cut circular gaskets in pliable, nonmetallic materials. Cutters have blade depth adjustment, top-reading inch and metric scales, and a smoothing base (unless noted). The smoothing base prevents thin materials (0.001″) from buckling. Include a cutting board that reseals itself after each cut.

(D) Standard Cutter (1/4″-6″ Cap.)— Includes one general purpose, one heavy duty, and one thin-material blade; one short and one long pivot pin; one pin for cutting discs; and an extra center pin ferrule. Also cuts straight strips up to 3 5/8″ wide. Body is phenolic. Comes in a metal storage case.

Replacement blade set contains four general purpose blades, one heavy duty blade, and one thin-material blade. *Blade assortment* contains two each of general purpose and heavy duty blades, and one blade each for thin and rigid materials.

(E) Wide-Range Cutter (1″-25″ Cap.)— Includes an extension arm, three general purpose and three heavy duty blades, one short and one long pivot pin, one pin for cutting discs, and a pin insertion handle. Body is plastic. Comes in a plastic case.

Replacement blade set contains three general purpose and three heavy duty blades.

(F) Extra-Wide-Range Cutter (1/4″-37″ Cap.)— Includes two extension arms, six general purpose blades, one short and one long pivot pin, a hex key, piercing awl, and cutting knob. Body is brass. Comes in a molded plastic box.

Replacement blade set contains six general purpose blades. *Optional extension arm* can be used for cutting gaskets up to 49″ diameter.

(G) Deluxe Extra-Wide-Range Cutter (1″-37″ Cap.)— Has a dovetail tool for cutting a circular gasket in sections held together by dovetail cutouts. Also includes two extension arms, three general purpose and three heavy duty blades, one pin insertion handle, one short and two long pivot pins, one pin for cutting discs, a bolt-hole locator that can find the center point of any size hole, one hex wrench, and one extra center pin ferrule. Body is plastic. Comes in a plastic case.

Replacement blade set contains three general purpose and three heavy duty blades. *Optional extension arm* can be used to cut gaskets up to 49″ diameter.

Crank-Style Circular Gasket Cutters

Cut gaskets with ease, speed, and accuracy. Just punch a hole in your material, mount it on the spindle, set the radius you need, and crank the handle. Cutters are cast iron and steel. Use the optional extension bars (sold separately) for cutting larger diameter gaskets.

Vise-Mount Cutter for Nonmetallic Materials— Easily mounts in a standard bench vise and cuts 2″ to 22″ dia. gaskets. Also cuts 1/32″ to 1/8″ thick rubber and cloth sheet packing.

Heavy Duty Bench-Mount Cutter for Metallic and Nonmetallic Materials— Cuts 3″ to 28″ dia. gaskets. For soft steel, zinc, brass, tin, and galvanized iron up to 0.04″ thick; stainless steel and Monel up to 0.03″ thick; copper up to 0.0625″ thick; lead, fiber, rubber, and PTFE up to 0.125″ thick; and cork up to 0.25″ thick.

Bench Mount

Guillotine-Style Packing-Seal Cutter

Cut all kinds of packing including Kevlar, copper-sheathed, and wire-core up to 1″ dia. at 15° and 45° angles. This cutter includes a vernier caliper for accurate measurements and a direct-reading diameter/circumference scale (4″ dia. max. shaft size) to eliminate material waste. Overall size is 21″ Lg.×6″ Wd.

Cutter	3662A11	$549.06
Replacement Blade	3662A21	26.76

Steel Drum Head Cutters

These cutters give you a reusable container with a clean edge and lip for using a cover (see page 1712 for covers). Good for occasional head cutting. Drum head cutters operate counterclockwise except for the *ratchet-action head cutter*, which can operate in either direction.

Standard Drum Head Cutter— Turn the knob to clamp cutter onto drum, then push down and pull up on the handle to cut around the head. Made of cast steel with a steel blade. Overall length is 20½″.

Nonsparking Drum Head Cutter— For drums containing flammable materials. Made entirely from aluminum alloys and bronze alloys with a beryllium copper blade. Like the *standard drum head cutter*, simply turn the knob to clamp cutter onto drum, then push down and pull up on handle to cut. Overall length is 19″.

High-Leverage Drum Head Cutter— With longer handles than the models above, you get better leverage and therefore reduced effort while cutting. Cutter has a rear pointed tip and a striking surface for an easier start. Simply squeeze the handles together to clamp to drum, then push both handles down and pull them up to cut. Made of steel with a steel blade. Overall length is 24″.

Ratchet-Action Drum Head Cutter— Clamp to drum and adjust the 18¾″ long ratchet handle for left- or right-handed use. Move handle up and down to open drums with less effort. Made of steel and high-strength aluminum with a steel blade. Size is 18″ Ht.×7″ Wd.×12″ Dp. (without handle).

Standard and Nonsparking

High Leverage

Ratchet Action

	Capacity: Drum Size, gal.	Capacity: Gauge	Cutters		Repl. Blade	
Standard	20-85	Up to 16	3778A12	$66.18	3778A14	$20.11
Nonsparking	30-85	Up to 16	3778A61	353.73	3778A62	122.33
High Leverage	20-85	Up to 16	3756A1	209.46	3756A2	52.76
Ratchet Action	30-55	Up to 16	2457A5	697.74	2457A6	102.59

Electric and Air-Powered Steel Drum Head Cutters

Fast cutting with virtually no manual effort. A self-propelled round blade makes a continuous cut, leaving a reusable container with a burr-free, smooth edge and lip for using a cover (see page 1712 for covers). Cutters have a high-strength aluminum and steel frame, a steel cutting wheel, and nonmarring rollers.

Standard drum head cutter is 24″ Ht.×10″ Wd.×12″ Dp.; ***heavy duty drum head cutters*** are 25″ Ht.×11″ Wd.×17″ Dp.

Electric Drum Head Cutters— Have a quiet-operating, single-phase, totally enclosed motor. They have a 31½″ long coiled power cord with three-prong plug. *Standard* is 1/8 hp, 60 Hz, 115 volts; *heavy duty* is 1/3 hp, 60 Hz, 110 volts.

Air-Powered Drum Head Cutter— Ideal for areas where work surfaces are wet. It has a variable-speed control and operates on 60-100 psi, 25 cfm air pressure. Air inlet is ¼″ NPT male. Hose size is ½″ (hose not included).

Optional Support Stands— Have an overhead roller and chain that holds the cutter at working height and pivots 360°. Stands are steel and 74½″ high. They're portable but can also be bolted to the floor.

Standard

	Capacity: Drum Size, gal.	Capacity: Gauge	Cutters		Replacement Cutting Wheel		Optional Support Stand	
Standard—*For 25-50 drums per week.*

Heavy Duty Electric with Optional Support Stand

Bolt and Chain Cutters

Hand Cutter

Bench-Mount Cutter

General Purpose, Heavy Duty, and Flush Cut

Flush Cut with Angled Head

Hard Chain and Padlock

Cut metal bolts, chain, rods, screws, rivets, nails, bars, and wire. Cutters have an adjustment screw for aligning cutting edges, forged tool steel jaws, and a lightweight tubular steel handle with rubber grips. The longer the handle, the more leverage the cutter provides. Not for wire rope.

General Purpose—Handle most jobs.

Flush Cut—Blades are beveled on one side for close-to-the-surface cuts.

Flush Cut with Angled Head—Cutting jaw is angled 30° up from the handle to keep work in sight and hands clear of the work surface. Blades are beveled on one side for close-to-the-surface cuts.

Heavy Duty—Have heavy duty extended-nose side plates to reinforce the blades and keep them aligned during cutting.

Hard Chain and Padlock—With a short-nosed jaw, these cutters force the material being cut deeper into the jaw for maximum leverage. The short jaw also allows you to cut one side of a chain link or padlock hasp without hitting the other side.

Bench-mount cutters can be mounted to a workbench for extra stability as well as ease of use for repeated cuts. Base is 3″×6″ with four 3/8″ dia. mounting holes (fasteners not included).

Replacement cutter heads include lockplate, jaws, and bolts.

Compact Bolt and Wire Cutters

General Purpose

Heavy Duty

Flush Cut with Angled Head

End Cutter

Cutting through bolt and wire is a snap with these compact cutters. Their small design lets you make one-handed cuts, takes up less space, and makes them more portable. Cutters have spring-action handles with a plastic grip, except 7119A33, which has a pliers-style handle (without spring return). Jaws are riveted onto the handles and are not replaceable. Overall length is 8″. Not for wire rope.

Air-Powered Bolt and Chain Cutters

Easily slice through bolts, chain, bars, hard wire, pins, and rivets with these hand-held air-powered cutters. Heads are made of forged hardened steel and precision ground to produce accurate cuts.

Air inlets are 3/8″ NPT female. Required hose size is 3/8″ (hose not included).

Light duty cutter requires 80-120 psi. *Heavy duty* cutter requires 90-130 psi.

Bench-Mount Rod Cutters

An alternative to hacksaws and bandsaws, these cutters use leverage to cut rods cleanly in a single stroke. They have an adjustable-length gauge for cutting duplicate lengths. Cut five sizes of threaded and unthreaded mild steel, brass, and aluminum rods and bars. Blades are steel. One blade mounts in the base, the other to the movable jaw.

Cutting Capacity, Mild Steel Rod	Size, Lg. × Wd. × Ht.	Handle Lg.

Threaded Rod Cutter

Turn cutter's blade with a wrench to cut #10 to 3/8″ dia. bolts and easily shear bolts up to Grade 5 while leaving their threads intact. Made of heat-treated alloy steel with a black-oxide finish. Overall length is 16″.

7792A21 ..... $67.24

Hard-Wire Cutters

Compact—Designed to cut music wire and other hardened solid wire. They have soft cushion-grip handles.

Heavy Duty—These powerful cutters make diagonal cuts with a nipping action to cut extra-hard wire with ease. They have PVC handle grips.

Cutter Type	Cutting Cap., Music Wire	Overall Length		
Compact	0.040″	5 1/2″	59445A45	$21.00
Compact	0.060″	5 1/2″	59445A44	36.11
Heavy Duty	0.079″	8″	27485A93	47.96
Heavy Duty	0.118″	10″	27485A91	68.58

Hard-Wire End Cutters

Also known as nippers, these cutters cut hard steel wire, nails, and small rivets close to the surface.

(A) Standard General Purpose—Also great for pulling nails.

(B) Premium General Purpose—Ideal for cutting copper, aluminum, and steel wire. Cutters have plastic grips and aligned, hardened cutting edges with a rust-resistant coating for clean, even cuts.

(C) High Leverage—Cutter has spring-return handles and uses leverage to make cutting heavy stock easier.

(D) Adjustable Jaw—Jaws adjust up to a 1/4″ opening and can be removed and ground. Cutters have a spring-action handle with vinyl grip.

Nut Splitters

Remove frozen, rusted, and stubborn nuts.

Manual—Blade swivels 360° to cut in any position (except on compact splitter, which has a nonswiveling, reversible blade). ***Compact*** and ***standard*** split one side of the nut at a time. Use a 3/4″ hand wrench to turn the adjustment screw. ***Heavy duty*** splits both sides of the nut at once. Use a 3/4″ impact or hand wrench to turn the adjustment screw.

Hydraulic—For all grades of nuts up to Rockwell C44. Splitters have an angled head to get in close for easy splitting, a heavy duty chisel that can be sharpened, and a single-acting 10,000 psi cylinder to connect to a 10,000 psi-rated hand, air, or electric pump. Include a chisel, a wrench, and a plastic case.

2916T5 ..... $107.40

Two-Speed Hydraulic Hand Pump—Rated at 200/10,000 psi. Outlet connection is 3/8″ NPTF female. Oil capacity is 45 cu. in.

2992T17 ..... $354.01

Large-Diameter Wire Rope Cutters

Ideal for cutting wire rope, aircraft cable, and stainless steel cable.

Economy Impact Style—With a quick hammer blow, these cutters cut without squeezing or flattening wire. Your rope is instantly ready for splicing or socketing. Dies and blades are made of steel. For best results, use with wire rope cutting bands (see 3501T on page 1421).

Also Available: Replacement parts. Please ask for 38535A92 and specify the McMaster-Carr part number of the cutter.

Hydraulic—These manually operated cutters make a clean cut with just a few pumps of the handle. They don't require any outside power and are light enough to carry to the job. Cutters and blades are steel.

Also Available: Repair kit. Please ask for 39525A81 and specify the McMaster-Carr part number of the cutter.

No-Fray Rope and Cord Cutter

A heated blade fuses the ends of material to prevent fraying. Cuts synthetic rope and cord including nylon, Dacron, and polypropylene. Blade is 2 5/16″ long and heats to 1200°F in 30 seconds. Cuts through 1″ rope in just 10 seconds. Base has four 3/16″ dia. holes for mounting. Operates on 110 VAC. Has a 5 1/2-ft. long power cord with three-prong plug. Overall size is 6 1/4″ Lg.×4″ Wd.×5 3/4″ Ht.

Cutter	2834A27	$149.98
Replacement Blade	2834A42	21.73

General Purpose Wire Cutters

The cutting edge is centered on the jaws, so these pliers can cut through soft, hard, and thick wire more easily than diagonal-cutting pliers. Cutters are steel with plastic grips.

Cutting Capacity, Dia. (AWG)	Overall Length	Jaw Length		
0.197″ (5)	9 27/32″	3/4″	5453A91	$49.89

Cordless Power Cable Cutter

Cut copper and aluminum power cable with the push of a button. Blades automatically open when the cut is complete. Head rotates 350° so you can cut in tight spots and inside panel boxes. Cuts up to 500 MCM copper and aluminum power cable.

Cutter has hardened steel jaws and an ABS plastic handle. Operates on one rechargeable 18-volt lithium ion battery; makes about 100 cuts per battery charge. Includes two batteries, a battery charger, and a carrying case. Overall length is 16″.

2920A13 ..... $1,477.03

Self-Healing Die-Cutting Boards

Made from pressed polypropylene, these boards endure pressure from dies and blades. After the pressure is released, they heal themselves to seal surface cuts. Durometer is 78D. Color is white.

BX-Cable and Flexible-Conduit Cutter

Easily cut armored cable such as BX, MC, and HCF cable and flexible metal conduit. Made from forged steel, cutter has plastic-dipped hand grips and a notch for stripping insulated wire. Cutting capacity is 1/2″. Overall length is 7 5/8″. One-handed operation.

3724A2 ..... $37.61

Coaxial and Fiber-Optic Cable Cutter

Get clean, distortion-free cuts with one-handed operation. Also cuts carbon fiber, Kevlar, and fiberglass. Cuts 3/4″ dia. cable. Overall length is 8 1/4″. Made from forged steel with plastic-coated handles.

4938A31 ..... $20.43

Rotary BX-Cable and Flexible-Conduit Strippers

Strip armored cable such as BX, MC, and HCF cable and flexible metal conduit. Turn the crank to make a slit in the cable casing, then just twist the casing to remove it without damaging the wires inside or having to debur the ends. Strippers can cut at the end or the middle of a cable roll. Made from die cast zinc.

	Capacity

Strap Cutters and Breakers

Strap Cutter

Strap Breaker

Break or cut steel and plastic strapping with ease.

(A-J) Strap Cutters

Economy— Made from forged steel.

Style A has spring-action jaws that open automatically. One-handed operation.

Style B has long handles for better leverage. One-handed operation.

Style C has an offset lower handle for cutting heavy steel strapping easily and preventing bruised knuckles. Two-handed operation.

Standard— Have hardened steel cutting heads and plastic handle grips.

Style D has spring-action jaws that open automatically. It also cuts tie wire. One-handed operation.

Style E has long handles for extra leverage when cutting wide straps. One-handed operation.

Style F makes light work of cutting heavy steel strapping. Offset lower handle prevents bruised knuckles. Two-handed operation.

Safety— Reduce the chance of worker injury from sharp flying strap ends. Cutters hold both ends of properly tightened strapping until tension is released. They're high-grade alloy steel with a plastic-grip top handle; *Styles G* and *J* also have a plastic-grip bottom handle.

Style G uses leverage for additional power. One-handed operation.

Styles H and *J* have rubber compression pads for greater control of tight straps. *Style H* is one-handed operation; *Style J* is two-handed.

(K&L) Strap Breakers

Just slip the strapping into the slot, rotate the handle, and snap the strap. Made from steel with a durable heat-treated cutting head and a vinyl handle grip.

Sheet Metal Snips

Standard

Standard with Replaceable Blade

Heavy Duty with Offset Handle

General

Notch/Nibble

Tight Spot

Standard Snips— Made of steel with vinyl grips. Meet Fed. Spec. GGG-S-291F and ANSI/ASME Industrial Standard B107.16M.

Standard Snips with Replaceable Blade— Blades are steel and easily replaceable. Handle is lightweight cast magnesium. *Replacement blade kit* includes 2 blades, 4 screws, and 4 nuts.

Heavy Duty Snips— Blades are heat treated then sharpened for increased performance and durability. Made of steel with vinyl grips.

Heavy Duty Snips with Offset Handle— Blades are heat treated then sharpened for increased performance and durability. Snips have an offset handle to keep your hand away from the material being cut. Made of steel with a plain handle.

Cutting Heads: *General* is for straight cuts and wide left and right curves. *Notch/Nibble* (also known as bulldog) has long handles and short blades, making it perfect for cutting heavy stock. For straight cuts as well as left and right curves. *Tight Spot* (also known as duckbill) has a tapered blade that cuts straight, tight left and right curves, and circles.

Light Gauge Sheet Metal Snips

Designed for cutting light gauge sheet steel up to 24 ga. Snips are double-plated Type 420 stainless steel with a polished finish. Overall length is 7 1/8″; cut length is 1 7/16″.

3729A65 ..... $16.68

High-Leverage Sheet Metal Snips

Also known as aviation snips. High leverage gives these snips substantially increased cutting pressure while self-opening jaws allow fast, smooth cutting. They cut angles, complex patterns, and circles with half the effort required with conventional snips. Snips have a locking latch and steel handles with vinyl-cushion grips (unless otherwise stated). Blades are steel. All except Styles G and H have blades that cannot be sharpened.

A Standard Snips—Blades are serrated to prevent slipping. Cut aluminum, tin, and steel up to 18 ga.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
1	Yellow	9 3/4"	1 1/2"	3585A12	$14.78
2	Red	9 3/4"	1 3/8"	3585A13	14.78
3	Green	9 3/4"	1 3/8"	3585A14	14.78

B Standard Snips with Offset Handle—Keep your hand away from the material being cut. Have serrated blades to prevent slipping. Cut aluminum, tin, and steel up to 18 ga. 3558A13 has polypropylene grips.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
1	Yellow	9 5/8"	1 1/2"	3558A13	$18.58
2	Red	9 1/4"	1 1/4"	3558A11	20.33
3	Green	9 1/4"	1 1/4"	3558A12	20.33

C Notch/Nibble Snips—Also known as bulldog snips. Trim and notch extra-heavy steel to 16 ga. Blades are serrated.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
1	Red	9 1/4"	7/8"	3832A11	$21.28

D Hard-Edge Snips—Blades are serrated and hardened to cut stainless steel up to 18 ga.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
2	Blue	9 3/4"	1 3/8"	3673A1	$25.52
3	Blue	9 3/4"	1 3/8"	3673A2	25.52

E Double-Cut Snips—Snips make two cuts, creating a 13/64" wide strip that peels back leaving little distortion. For duct, sheet metal, and steel up to 20 ga. They have offset handles to keep your hand away from the material being cut. Blade clearance can be adjusted for clean, square cuts.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
1	Gray	9 1/4"	9/16"	3908A11	$27.38

F Long-Cut Snips—A 3" cut length makes these snips great for cutting aluminum, vinyl siding, plastic, screening, and steel up to 20 ga. Serrated blades prevent slipping. Blades are hardened steel.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
1	Blue	11 1/2"	3"	7102A15	$19.54

G Long-Cut Snips with Offset Handle—Have a curved jaw for better cutting ability and an offset handle to keep your hand away from the material being cut. Cut steel up to 18 ga. and stainless steel up to 22 ga.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
2	Black	11"	2 3/8"	6770A13	$29.44

H Sharpenable High-Speed Steel Snips—Stay sharp significantly longer than standard steel snips and can be sharpened. Blade edge has a high-speed steel surface for cutting steel up to 16 ga., stainless steel up to 18 ga., rusty steel, and other hard-to-cut materials. Snips have offset handles to keep hand away from material being cut.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
2	Black	10 1/4"	1 5/16"	3545A41	$91.31
3	Black	10 1/4"	1 5/16"	3545A42	91.31

J Upright Snips—Blades are 90° from the handle to keep your hand away from the blade and allow for easier cutting of curves and in tight areas. Snips cut up to 28-ga. stainless steel. Grips are polypropylene.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
2	Red	8 3/4"	1 1/4"	4249A21	$19.85
3	Green	8 3/4"	1 1/4"	4249A22	19.85

Leather Belt Sheath

For all snips except Style J.

3585A21 ..... $3.94

Burr-Free Edge Sheet Metal Cutter

High leverage and quick action let you make clean burr-free cuts without damaging painted or plated materials. Plus, a safety guard prevents cut-off waste from flying up at operator. Cut a 0.110" wide strip. Jaws are self-opening. Handles have a polyurethane cushion grip and locking latch. One-handed operation.

Cutting Capacity: Mild Steel	Aluminum, Brass, Copper	Lg.	Cutter		Repl. Blade	
18 ga.	15 ga.	11"	3793A4	$52.27	3793A11	$11.50

Manual Sheet Metal Nibbler

Make round, square, and irregular-shaped holes in steel up to 18 ga. (0.048"), aluminum up to 16 ga. (0.060"), copper, and plastic. Use a drill to make a 7/16" dia. hole, then push nibbler through hole and squeeze handles together to nibble out small pieces of material. Nibbler is made of hardened tool steel with a rust-preventive black-oxide finish. Overall length is 6 3/4".

Nibbler 3623A14 $37.00
Repl. Punch 3623A15 21.00

Nibbler Attachment for Portable Drills

With Drill (Not Included)

Attach this tool to any portable drill to create a high-powered nibbler that cuts curved or straight shapes in flat and corrugated sheet metal and plastic. Requires a 1/2" dia. start hole. Use with a drill having a maximum speed of 3,000 rpm. Attachment has a 1/4" hex shank, hardened tool steel punch, and ABS plastic housing.

Maximum cutting capacity is 0.031" thick for stainless steel; 0.047" thick for sheet steel; 0.059" thick for copper/brass; 0.079" thick for PVC, aluminum, and floor tile; and 0.099" thick for synthetic material.

Nibbler 7293A11 $110.75
Repl. Cutter 7293A14 42.52

Sheet Metal Notchers

Cut 1" deep V-shaped notches in mild steel up to 20 ga. (0.036"). Notchers are forged steel with rubber cushion-grip handles. Overall length is 9".

Notch Angle	Notchers Each		Repl. Blade Set	
45°	3599A1	$186.03	3599A11	$95.82
90°	3599A2	168.10	3599A21	91.18

About Power Nibblers and Power Shears

Nibblers— Cut heavy gauge material without distortion and with relatively burr-free edges. A nibbler is actually a fast punch that nibbles small pieces out of the material.

Shears for Thin Materials— For cutting light gauge materials. They operate like sheet metal snips, producing a clean edge with no material waste.

Burr-Free Edge Shears— Also known as slotting shears, these make two parallel cuts to create a waste strip that peels away from the remaining material. Use for cutting straight lines, contours, and irregular shapes; not for cutting tight curves or corrugated material. They cut smoother than shears for thin materials and leave clean edges.

Sheet Metal Shears— Also known as right-angle shears. For cutting heavier gauge material compared to shears for thin materials and burr-free edge shears. Best for straight patterns on flat material, they also cut curves and notches. There's no material waste, but shears leave material with slightly rough edges.

Electric Nibblers for Heavy Gauge Sheet Metal

A

B

C

D

E

Achieve an almost burr-free cut with no material distortion. These nibblers have an aluminum housing, except Style C is magnesium. All include one punch, one die, and instructions.

Style A has a round punch that can rotate 360°. Can cut flat stock up to 60″ per minute. Not for corrugated or uneven material. Nibbler can change cutting direction as desired (no cutting radius required). Has a lever switch. Overall length is 9¾″. Nibbler is double insulated; operates on 120 VAC/VDC, 60 Hz, 3 amps; and has an 8-ft. cord with two-prong plug. UL listed, CSA certified, and meets OSHA requirements.

Style B has a round punch that can rotate 360°. Can cut uneven and corrugated material up to 84″ per minute. Nibbler can change cutting direction as desired (no cutting radius required). Has a lever switch with locking button. Overall length is 10½″. Operates on 120 VAC/VDC, 60 Hz, 6.5 amps; has an 8-ft. cord with two-prong plug; and is double insulated. UL listed, CSA certified, and meets OSHA requirements.

Style C cuts flat stock and uneven and corrugated material up to 105″ per minute. Has a toggle switch and a reversible side handle. Overall length is 12¼″. Nibbler is double insulated; operates on 120 VAC/VDC, 60 Hz, 4 amps; and has an 8-ft. cord with two-prong plug. UL listed and meets OSHA requirements.

Style D cuts flat stock up to 48″ per minute. Not for corrugated or uneven material. Has a trigger switch with locking button. Overall length is 13″. Operates on 110 VAC, 60 Hz, 3-5 amps and has a 10-ft. cord with three-prong plug.

Style E cut flat stock up to 48″ per minute. Not for corrugated or uneven material. They have a locking trigger switch and include an extra punch. Additional tools (sold separately) are required to cut aluminum. Overall length is 14¼″. Operate on 120 VAC, 60 Hz, 15 amps and have a 10-ft. cord with three-prong plug.

Air-Powered Nibblers for Heavy Gauge Sheet Metal

F

G

H

J

Powered by compressed air, these nibblers have heavy duty bearings and an aluminum housing, unless noted. They have a lever switch, unless otherwise stated, and include one punch, one die, and instructions. Operate on 90 psi air pressure and require a ⅜″ hose (not included), except Style H, which requires 100 psi and a ½″ hose.

Style F cuts corrugated material and leaves a burr-free cut with no material distortion. Cuts 62″ per minute. Overall length is 7 1/16″. Air inlet is ¼″ NPT female. Air consumption is 21 cfm.

Style G cuts corrugated or uneven material and leaves a burr-free cut with no material distortion. Cuts 46½″ per minute. Includes an extra punch. Overall length is 7″. Air inlet is ¼″ NPT female. Air consumption is 4 cfm. Housing is plastic.

Style H cuts flat stock and corrugated or uneven material while leaving minimal burr and no material distortion. Cuts 55″ per minute. Overall length is 12″. Air inlet is ⅜″ NPT female. Air consumption is 27 cfm.

Style J cuts flat stock and leaves minimal burr and no material distortion. Not for corrugated or uneven material. Cuts 48″ per minute. Has a locking trigger-style switch. Overall length is 12″. Air inlet is ⅜″ NPT female. Air consumption is 21-23 cfm.

▲The smallest arc (or curve) the tool can cut. Radius × 2 equals the smallest diameter circle the tool can cut.

For information about power shears, see page 2348.

Electric Sheet Metal Shears

Also known as right-angle shears, these shears don't waste material (such as produced by nibblers and burr-free shears). Ideal for cutting straight patterns on flat material and for trimming heavy gauge material. They also cut angles and curves. They're double insulated. Operate on 120 VAC/VDC, 60 Hz (unless otherwise indicated) and have an 8-ft. power cord with two-prong plug. UL listed. CSA certified. Meet OSHA requirements.

Style A have an adjustable lower blade to accommodate various metal thicknesses.

Style B has four-sided blades for longer life; when you need a new edge, just turn the blade 90°.

Style C has a D-shaped handle for excellent control. Operate on 120 VAC, 60 Hz.

▲The smallest arc (or curve) the tool can cut. Radius×2 equals the smallest diameter circle that tool can cut.
● Sold and priced individually. Tool requires two identical blades (upper and lower).

Electric and Air-Powered Shears for Thin, Pliable Materials

Similar to sheet metal snips, these shears cut with a scissor-like action and are also known as scissor-blade shears. They leave a clean sheared edge. The bottom blade remains stationary while the upper blade moves up and down to cut. Blades are tool steel.

Electric shears are double insulated and rated 5 amps. Operate on 120 VAC, 50/60 Hz and have an 8-ft. power cord with two-prong plug.

Air-Powered shears require 90 psi air pressure. Air inlet is ¼″ NPT female. Requires ¼″ to ½″ hose (not included). Air consumption is 4 cfm.

D ***Shears for Light Gauge Materials—*** Cut light gauge materials including mild steel up to 24 ga. (0.024″ thick), aluminum up to 0.020″ thick, and plastics up to ⅛″ thick. Blades close completely when cutting. 3818A18 has a variable-speed trigger.

E&F ***Shears for Pliable Materials—*** For pliable materials including foam rubber, vinyl, foils, wire mesh screening up to 18 ga., and plastic sheeting up to ⅛″ thick. Blades do not close completely. *Style E* is UL and C-UL listed.

Burr-Free Electric and Air-Powered Sheet Metal Shears

Get burr-free edges with no distortion of the material with these double-cut shears. Also known as slotting shears, they have a movable blade between two stationary blades; the movable blade creates two cuts and a 7/32″ wide waste strip. Shears cut sheet metal in straight lines, contours, and irregular shapes such as those needed for flashing and signs. Blades are tool steel.

G ***Electric Shears—*** Double insulated and rated for 5 amps. Come with a wrench for head adjustment and lubricant. Operate on 120 VAC, 50/60 Hz and have an 8-ft. power cord with two-prong plug. UL and C-UL listed.

H&J ***Air-Powered Shears—*** Operate on 90 psi air pressure. Air inlet is ¼″ NPT female. Requires ¼″ to ½″ hose (not included). Air consumption is 4 cfm. Come with a wrench for head adjustment and lubricant.

K ***Cordless Shears—*** Come with a 14.4-volt NiCad battery pack, charger, blade wrench, and case.

Bench-Top Shears for Heavy Gauge Sheet Metal

Make clean cuts in heavy gauge metals without distortion. These shears also cut plastic, rubber, and leather. Blades are steel and can be sharpened.

(A) Standard Shears— Frames are steel plate and are rigidly braced to keep blades aligned. Base has two 1/2″ dia. mounting holes (fasteners not included).

(B) Shape-Cutting Shears— The unique shoulder design lets you turn the work during cutting so you can create complex shapes. Frame is cast steel. Blades are adjustable. Base has three 1/2″ dia. mounting holes (fasteners not included). The *4 1/4″ max. cut length shear* has an adjustable hold-down bar to keep material in place.

Replacement blades are sold in sets of two.

♦ Shear capacity is the same for soft aluminum.

Light Duty 12″ Bench-Top Sheet Metal Shears

Cut flexible material up to 0.0625″ thick, brass up to 0.020″ thick, steel up to 0.015″ thick, and aluminum up to 0.030″ thick. The work surface of these shears has holes for positioning the calibrated scale, so you can use the entire length of the blades. Shears are 11″ Ht.×25″ Wd.×14 1/2″ Dp.; handle is 17 1/4″ long. Frame is aluminum and steel. Blades are hardened steel and can be sharpened. Do not use on phenolic or other rigid materials.

Max. Cut Wd.		
Shears		
12″	86745T51	$531.45
Replacement Blades		
Upper Blade	86745T52	170.92
Lower Blade	86745T53	127.69

Bench-Top Sheet Metal Notcher/Shears

Notch, shear, and pierce steel, aluminum, copper, plastic, leather, linoleum, Formica, and more. These versatile shears have an adjustable ram stroke for piercing and knockout operations. Frame is made of cast iron. Blades are tool steel and are set at 90°. Base has four 1/2″ dia. mounting holes (fasteners not included). Tools cut a 90° notch (maximum size 6″×6″) in mild steel up to 16 ga. (0.060″ thick), stainless steel up to 20 ga. (0.036″ thick), and soft aluminum up to 9 ga. (0.125″ thick).

Repl. blades are sold in a set of four.

Optional floor stand (sold separately) is 30″ Ht.×16 1/2″ Wd.×19″ Dp.

Heavy Duty 25″ Bench-Top Sheet Metal Shears

These large-capacity shears have an 11 13/16″×28 1/2″ work surface, an easy-to-read front gauge (up to 12″), a back gauge (up to 12 1/2″), a finger safety guard, and an automatic material hold-down. Frame is steel. Weight is 220 lbs. Blades are hardened tool steel, can be sharpened, and are reversible and interchangeable for use as an upper or lower blade. Cut leaded brass up to 16 ga. (0.062″ thick), mild steel up to 18 ga. (0.048″ thick), and aluminum up to 14 ga. (0.075″ thick).

Max. Cut Wd.	Size, Ht.×Wd.×Dp.●	Handle Lg.		Each	
25″	15 13/32″×32 1/2″×27 3/32″	25″	36665A11		$1,864.02
Replacement Upper and Lower Blades			36665A14	Pair	$935.06

● Dimensions without handle; overall height with handle is 36 7/8″.

Wide-Width Sheet Metal Shears

Also known as squaring shears, these shears have machined and precision ground surfaces to provide accurate square cuts and are foot operated—just step on the foot treadle to run. Frame is cast iron. Blades are steel, adjustable, and can be sharpened.

Shears have a material hold-down clamp, a front gauge, a double-locking back gauge with embossed scales and vernier wheels for fine adjustments, 30″ long front extension arms with stop, and pedal stops for safety. Back gauge range is up to 30″; front gauge range is up to 37″.

Shears cut mild steel up to 16 ga. (0.060″ thick), stainless steel up to 20 ga. (0.036″ thick), and soft aluminum up to 9 ga. (0.125″ thick). Shears also cut other metals including copper and nickel alloys.

Max. Cut Wd.	Overall Size, Ht.×Wd.×Dp.	Shears Each		Repl. Blades Set	
37″	42″×46 1/2″×27″	3809A2	$2,106.16	3809A11	$631.43
52 1/4″	42″×61″ ×36″	3809A4	2,787.16	3809A12	807.50

Rounded-Corner Sheet Metal Cutter

Cutting Base with Corner Punch

Easily round corners or punch holes into sheet metal—simply combine the cutting base and a rounded-corner punch. Cuts brass up to 0.020″ thick, steel up to 0.015″ thick, aluminum up to 0.040″ thick, and plastic up to 0.060″ thick.

Cutting base is 8″ Lg.×6″ Wd.×2 1/2″ Ht. with a 10 1/4″ lg. handle. Made of aluminum.

Corner punch is hardened aluminum and steel. **To Order:** Please specify radius: 1/8″, 3/16″, 1/4″, 5/16″, 3/8″, or 1/2″.

Cutting Base	23805A11	$110.00
Corner Punch	23805A92	108.33

Angle-Iron Floor-Mount Shears

Cut mild steel angle iron up to 2″×2″×1/4″ with these handy shears. They have a cast iron frame, tool steel blades, and a long handle for maximum leverage. Base has two 17/32″ dia. mounting holes (fasteners not included). Shears are 13 1/2″ Lg.×7″ Wd.×10″ Ht.; handle is 72″ long.

Shears	3807A1	Each	$528.11
Repl. Blade for Jaw	3807A3	Each	$80.45
Repl. Blade Set for Base	3807A5	Set	$105.00

Paper Cutters

Standard Table Top with Wood Base

Large-Capacity Table Top

Floor Model

Cut most paper products. Not for sheet metal, wood, leather, rubber, or roofing materials.

Table-Top Paper Cutters

Standard—Have a self-sharpening blade, a base marked with a ½″ grid, an inch/metric rule, a trigger-locking safety latch, a blade guard, and skid-resistant feet. 3823A42 and 3823A21 also have automatic hold-down clamps to prevent slipping and improve cutting accuracy.

Cutters with a polypropylene base have stainless steel blades and are warp, crack, and peel resistant. Not for mat board.

Cutters with a wood base have steel blades.

Also Available: Replacement blades. Please ask for 3823A51 and specify handle or base blade and paper cutter part number. *Cutters with a polypropylene base* have stainless steel replacement blades (unless noted). *Cutters with a wood base* have steel replacement blades.

Large Capacity—A clamp securely holds the paper in place while roller guides control the blade for easier cutting of large capacities. It has a hardened-steel blade, a safety latch, and protective rubber feet. The back stop is marked with inch and metric scales.

Paper Cutters with Safety Blades

Light Duty

Heavy Duty

These table-top paper cutters have a self-sharpening blade that is partially enclosed to prevent accidental cuts. Cut most paper products. Not for sheet metal, wood, leather, rubber, or roofing materials.

Light Duty—Have a steel cutting wheel with a molded-plastic handle that's mounted on a single guide rail, a metal base with an inch rule, and a see-through paper clamp.

Heavy Duty—Cut light foils and film to mat board. Paper cutters have a tungsten steel cutting wheel that glides on dual guide rails for more precise cuts. They have a gray melamine wood base marked with a 1/4″ grid, an aluminum inch/metric side rule, an adjustable paper stop, and a clamp.

Precision Paper Cutters with Safety Blades

To prevent accidents, a clear polycarbonate guard completely covers the steel cutting blades. These table-top paper cutters have a metal base, a hand clamp that exerts extra pressure for improved cutting accuracy, a back gauge, and a side guide with inch/metric scale. Cut thin paper to mat board. Not for sheet metal, wood, leather, rubber, or roofing materials.

Also Available: Replacement upper and lower blades are sold as a set. Please ask for 3850A3 and specify paper cutter part number.

★ Based on standard 20-lb. paper.

Electric Foam-Rubber Cutter

Similar in operation to a jigsaw, this heavy duty cutter uses reciprocating cutting action to cut any density of foam, sponge rubber, and flexible plastic foam. Cutter has an 8″ high-speed steel blade with sawlike teeth; maximum cutting depth is 8″.

The included footplate guides the blade, making it easier to cut corners. For cutouts, just remove footplate.

Motor housing is nylon and gear housing is aluminum. Operates on 120 VAC, 60 Hz, 3.2 amps; has a 7-ft. power cord with two-prong plug; and is double insulated. UL listed. Meets OSHA requirements.

Optional 12″ blades have a maximum cutting depth of 12″. To properly install them, you will need the *blade guide* sold separately.

Heavy Duty General Purpose Scissors

Straight Handle with Pointed Tips — *Offset Handle with Safety-Point Tips*

Scissors are for right-hand use except the left-handed offset handle scissors. Chrome/nickel blades have chrome plating over nickel plating for added durability. ***Pointed tips*** have standard scissor blades. ***Safety-point tips*** have rounded blade ends. ***Offset-handles*** keep your hand clear of the material being cut. ***Heavy duty blades*** are wider, thicker, and stronger and have a raised edge to prevent blade separation.

Sharp-Point Scissors

Standard — *Barber Style*

Blades have a sharp point for fine cutting, notching, and trimming. They cut material such as filaments and fine paper. For right- and left-hand use.

Standard and ***Heavy Duty Scissors—*** Made of chrome over nickel-plated forged steel. *Heavy duty scissors* have thicker blades.

Barber Style Scissors— The bottom blade is serrated to prevent material from slipping. Scissors are forged stainless steel, except for 3605A11, which is nickel-plated forged steel.

Heavy Duty Corrosion-Resistant Scissors

Curved Blade

Cut in wet areas without worry of rust or corrosion. These scissors handle anything from paper and gasketing to poultry. For right-hand use.

Curved blade works well for close-cut trimming on flat surfaces.

Serrated blades keep materials from slipping while cutting.

Knife blades have one blade ground extra sharp for fast, clean cuts.

Overall Length	Cut Length	Blade Type

♠ Have an extended bottom ring for easy four-finger insertion.

Heavy Duty High-Leverage Scissors

Snub-Nose Blade — *Broad Blade* — *Regular Blade*

Longer handles and shorter blades give you more leverage than general purpose scissors for easily slicing and trimming light metals, light wire screening, heavy fabrics, and thin plastics. For right-hand use.

Snub-nose blade is for close, intricate cutting.

Broad blades are shorter and wider for even more leverage.

Serrated blades keep materials from slipping while cutting.

7″	2 5/16″	4945A47	58.56

Lightweight Titanium Scissors

Standard — *Heavy Duty*

Titanium is bonded over a stainless steel core, producing a sharp, long-lasting cutting edge that's three times harder than stainless steel. These scissors resist rust, corrosion, and adhesive residue. Handles are contoured with a cushioned grip. For right- and left-hand use. ***Heavy duty scissors*** have extra-wide blades with a longer cut length for ultra-smooth cutting. ***Heavy duty scissors with nonstick blades*** cut tape, hook and loop, and other glued surfaces without the adhesive sticking to the blades.

Lightweight Stainless Steel Scissors

These lightweight scissors work well on fabric, paper, and cardboard. For right- and left-hand use (unless noted). Blades are stainless steel. *TiN* (titanium nitride) coating resists wear and corrosion and reduces friction. *PTFE* coating creates a nonstick surface.

(A) General Purpose— Handles are contoured for a comfortable grip.

(B) Soft, Flexible Grip with Oversized Finger Loops— Soft, flexible nonslip grips reduce hand fatigue. The lower finger loops are oversized to accommodate gloved hands. 7091A14 has slightly curved blades.

(C&D) High Leverage— Shorter blades give these scissors extra leverage to cut wire, rubber, leather, light plastic, and heavy canvas. *Style C* have one serrated blade. *Style D* blades are ribbed for extra strength and they have one serrated blade.

Scissors

(K) Long-Cut Paper and Fabric Scissors— Make long, continuous cuts. 3885A1 and 3885A4 are forged steel with chrome over nickel-plated blades. 3877A12 is polished stainless steel with PVC-dipped handles.

(L) Scissors with Jar/Bottle Opener— Cut twine, rope, cardboard, wire screens, light metals, and more. Also open jars and bottles. Made of stainless steel with painted handles.

(M) Scissors with Screwdriver and Bottle Opener— Get more than scissors. These scissors are also a prying screwdriver, a bottle opener, and a tacking hammer. Made of steel with chrome-plated blades.

(N) First-Aid Scissors— Blunted tips slip under bandages and prevent injury. 3720A22 and 3720A23 are stainless steel. 3720A24 has large rings for easy finger insertion and is steel with a chrome over nickel plating.

(P) Blunt-Point Scissors— Also known as pocket shears, these cut fabric and other light materials. Made of forged steel with chrome over nickel plating.

(Q) Collapsible Pocket Scissors— Points tuck away for safe, go-anywhere convenience. Blades are stainless steel; handles are chrome-plated die cast zinc.

(R) Notched-Blade Scissors— Also known as pinking shears, these leave a ravel-resistant zigzag edge. Made of forged steel with chrome over nickel-plated blades.

Heavy Duty Belt and Leather Scissors

Short, durable blades give you leverage to slice through heavy leather belting. Made of forged steel, these scissors have one serrated blade to prevent material from slipping and one knife-edged blade for easier cutting. Overall length is 9¾″; cut length is 3¼″. For right-hand use.

3878A11 ..... $35.60

Heavy Duty Fabric and Rubber Scissors

Cut carpet, rubber, canvas, and other thick fabrics. Blades are forged steel that is tempered, precision ground, and double plated with chrome over nickel. Handles are offset to keep hand clear of the material being cut. 3877A15 has a soft cushion grip; 3877A11 has a contoured handle and meets GSA specifications. Both are for right-hand use.

Light Fabric Cutters

Electric *Air Powered* *Cordless*

Cut sheer synthetics, thin vinyl, and felt with precision and ease not provided by traditional scissors. Cutters have tool steel rotary blades and a built-in blade sharpener. Not for cutting carpet, corrugated material, rubber, plastic, or metal.

Electric— Cut straight lines and patterns in light fabrics up to ½″ thick with the included 2¼″ dia. round blade in a plastic housing. Use the *optional hexagonal blade* (sold separately) to cut dense cloth up to ½″ thick. Motor is 1/10 hp. Operates on 110 VAC, 60 Hz, 0.7 amps; has an 8-ft. long power cord with two-prong plug; and is double insulated.

Air Powered— Use for general purpose wet and dry cutting and for cutting light or dense cloth up to ⅜″ thick with the included 2 1/32″ semi-square blade in an aluminum housing. Use the *optional round blade* (sold separately) for trimming and edging light fabrics up to ⅜″ thick. Motor is ⅓ hp. Recommended air pressure is 90 psi. Air inlet is ¼″ NPT male. Hose size is ¼″; hose not included. Air consumption is 4 cfm.

Cordless— Operates on a 7.2-volt battery, so there's no power cord or air line to get in your way. Make clean, nonfray cuts through a wide range of fabrics from lightweight textiles to heavy-grade felts with the included 2 1/32″ dia. semi-square blade. Use the *optional round blade* for general purpose cutting (may cause fraying). Use the *optional octagonal blade* to make nonfray cuts in coarse fabrics. Cutter has a variable speed motor that operates from 0 to 2,000 rpm in both forward and reverse and an adjustable blade guard. Includes two 7.2-volt batteries and a one-hour charger.

Scissors for Kevlar and Abrasive Materials

Easily cut abrasive materials like Kevlar and fine wire and light metals.

Standard Scissors— For right-hand use. 2498A28 is heat-treated steel with nylon comfort grips and pointed tips. 2498A27 is forged steel with blunted tips to prevent snagging.

Spring-Action Scissors— After each cut, the jaws spring to the open position, making continuous cutting a breeze. Made of forged steel with vinyl-covered grips. For right- and left-hand use. 3897A11 and 3897A12 have short, narrow blades for getting into tight spots.

No-Fray Heated-Blade Scissors

Eliminate fraying when cutting carpet, nylon webbing and slings, and synthetic fabrics. With the required temperature control unit (sold separately) the blades on these scissors heat to 540° F to sear thread ends. Scissors generate 100 watts and are made of forged steel. Include a stand and 6-ft. long cord that plugs into the temperature control unit. For right-hand use.

Temperature control unit has 12 settings that let you choose temperatures from 80° to 540° F. Operates on 115/120 VAC and has a 6-ft. power cord with three-prong plug.

Precise-Cut Compact Scissors

Excellent for cutting filament, wire, and thread in tight areas. Scissors are steel with nickel plating. For right- and left-hand use.

Snub-nosed blades are short to fit into tight spaces. ***Curved blades*** are for trimming flush against a flat surface. ***Angled blades*** keep hand clear of material being cut.

Style C has a wire cutter and a serrated jaw to prevent material from slipping.

Style D has a notched blade to selectively cut small wires.

♠ One blade is serrated to prevent wire slippage.

Precision Flush-Cut Wire Cutters

These precision tweezer-style cutters have specially designed tips to let you position and flush-cut wire. Recommended for cutting soft copper, gold, silver, and magnetic wire of no more than 0.010″ diameter. Tips are 3/8″ long and angled 70°. Cutters have a smooth outside grip and dull finish. Overall length is 4 1/2″.

400 Series Stainless Steel	8387A75	76.00

Compact Thread-Snipping Scissors

Replaceable-Blade with Sharp Point

Nonreplaceable-Blade with Sharp Point

Snip thread and lightweight filaments with these compact scissors. They have self-opening, spring-action handles for smooth, easy cutting. For right- and left-hand use.

Sharp-point blades are for work in tight places.

Blunt-point blades prevent snagging.

Replaceable-Blade Scissors

Have stainless steel blades and a PVC handle. *Replacement blades* are sold 10 pairs to a package and include 40 blade screws.

Shears for Laminated Plastics

Cut right through all kinds of brittle, high-pressure laminates without chipping, binding, or fracturing the material. Shears work by cutting out a 1/8″ wide strip of material while the material on either side of the strip lays flat. They won't mar decorative surfaces. Not for use on soft plastics. Shears have steel blades and PVC hand grips. For right- and left-hand use.

O'all Lg.	Cut Lg.		
9″	1 1/2″	7103A11	$33.40

Mini Sheet Cutters

Standard

Replaceable Blade

Choose one of these handy plastic cutters for quick, clean cutting of paper and thin plastic sheeting. All have guarded blades to protect your fingers.

Economy Cutter— Blade is stainless steel. Overall length is 3″. Package quantity is 5.

49305A71 ..... **Pkg.** $5.71

Standard Cutter— Blade is stainless steel. Overall length is 2 3/4″.

49305A67 ..... **Each** $3.73

Replaceable-Blade Cutter— Replace blade as needed to be sure you always have a sharp edge. Cutter has a hold-down tab that flattens the material ahead of the blade edge for easier cutting. Blade is steel. Overall length is 3 1/2″.

Replaceable-Blade Cutter	3221A3	**Each**	$6.78
Repl. Blades (Pkg. of 10)	3221A4	**Pkg.**	$4.62

Compact Scissors and Wire Strippers

Notched Blade

Also known as electricians' shears, these scissors are well-suited for many telephone-installation and electrical-service applications. The back edge of the blade has a file to clean contacts. Made of forged, nickel-plated steel. For right- and left-hand use.

Notched blades have two notches for stripping 19- and 23-gauge wire.

Serrated blades keep materials from slipping while cutting.

Clean-Cut Utility Shears

Short Cut

Long Cut

The cutting blade pushes down on the flat anvil-style jaw to produce a clean cut. Grips are vinyl-coated. For right- and left-hand use.

Short-Cut Shears— Great for cutting wood dowels, rope, and small branches. Made of steel with a brass anvil and steel blade with non-stick coating.

Replacement blade kit for short cut shears includes a steel blade with non-stick coating, brass anvil, and hardware.

Long-Cut Shears— Cut hose, tubing, and a variety of common materials including carpet, wood trim, and leather. Made of steel with a plastic anvil and a steel blade. There are three extra blades in the handle.

Replacement blade kits for long cut shears include three steel blades and a plastic anvil.

Replacement Blades for Utility Knives

Dispenser Pack

Fit most brands of utility knives, including Ardell, Hyde, Wiss, General, Red Devil, Allway, Starrett, Evans, Great Neck, and Warner. Check the style of blade used in your knife and match it with the images shown here.

Dispenser packs include 100 blades (unless noted), dispense one at a time, and can be hung on the wall.

Serrated blades create less friction allowing a faster cut with less force.

Bimetal blades stay sharp three times longer than steel blades. *TiN-coated* blades are extra durable.

Retractable Rotary-Blade Safety Cutter

With a squeeze of the plastic spring-loaded handle, you can cut plastic sheet, cloth, felt, and other sheet material. Includes one 0.024″ thick steel blade that retracts into the handle when the squeeze bar is released. Blade diameter is 1″. Cutter is 5 3/4″ long with a cut depth of 1/8″.

Cutter	**4925A11**	$15.23
Repl. Blade	**4925A13**	4.89

Breakaway-Blade Utility Knives and Blades

Always have a sharp blade ready to go. Just snap off the dull blade segment with the built-in blade breaker; ratchet-lock knives require pliers to break off the blade. All knives have plastic handles, except Style E has a stainless steel handle and Style J has a hard, rubber-like handle. All have steel blades, except Styles E-G have stainless steel blades.

Manual-Lock Knives
A sliding two-piece, manually operated lock holds the blade in position.
(A) Standard Duty— Good general purpose knife.
(B) Magazine Load— Has a five-blade magazine with automatic blade load.

Auto-Lock Knives
Blade locks instantly in position when the push-button is advanced.
(C) Standard Duty— Extra blades store in the handle.
(D) Trimline— Slim design with storage for extra blades in the handle.
(E) Stainless Steel Trimline— Slim design with a stainless steel handle and blade.
(F) Cushion Insert— Rubber insert for comfort and slip resistance.
(G) Cushion Insert Trimline— Slim design with a rubber insert for comfort and slip resistance.

Ratchet-Lock Knives
Knives have a ratchet wheel lock that adjusts the blade at any position.
(H) Standard Duty— Has a comfort-grip, slip-resistant handle.
(J) Chemical Resistant— Resists acetone and solvents. Handle is made of a slip-resistant, rubber-like material for a firm grip.
(K) Heavy Duty Cushion Grip— Has a thicker and wider blade for durability and a rubber cushioned grip for comfort and slip resistance.
(L) Carton Cutting— Has a depth-cutting guide and a staple puller.

Precision Knives and Replacement Blades

Knives

Standard

Choose-a-Color Rubber Grip

Heavy Duty

Plastic Handle

Swivel Blade

Retractable Blade

Great for fine cutting, slicing, trimming, etching, and scoring. All except the plastic-handle knife come with a safety cap. All include one blade.

Standard— Has an aluminum handle.

Choose-a-Color Rubber Grip— Has a fatigue-reducing rubberized grip on the handle. **To Order:** Please specify grip color: black, blue, green, purple, or red.

Heavy Duty— For tough cutting jobs. Has an aluminum handle.

Plastic Handle— Good for heavy-pressure cutting, this knife has a large, fluted plastic handle for an extra-firm grip; handle is red.

Swivel Blade— Blade rotates 360° for cutting curves and circles. Handle is aluminum.

Retractable Blade— Like a pen, a push of a button extends or retracts the blade. Handle is aluminum.

Light Duty Hot-Blade Knife

Knife

Temperature-Control Unit

Use heat to cut through gasketing, nylon webbing, slings, and other thin synthetic fabrics. Without the optional temperature-control unit, knife heats up to 1050°F. The cutting tip is copper with a 5/8″ Lg.×3/8″ Wd.×1/16″ Thick. blade that is similar in shape to a butter knife. Knife with tip is 10″ long. Maximum cutting depth is 5/8″. Operates on 60 watts, 115 VAC, 60 Hz, and has a 5-ft. long cord with two-prong plug.

Optional Temperature-Control Unit—Lets you adjust the temperature from 150° to 1050°F. Knife plugs into the unit. Operates on 115 VAC and has a three-prong plug. Size is 3 3/4″ Ht.×2″ Wd.×2″ Dp.

Knife	2453A61	$64.68
Optional Temperature-Control Unit	2453A62	61.48
Optional Knife Stand	2453A64	6.83
Replacement Knife Tip	2453A63	15.51

Thermocutters

Standard

Optional Cutting Sling with Blade

Heavy Duty

Blades heat instantly to cut rubber, PVC, cork, polystyrene, and other thermoplastic materials up to 5″ thick (depending on material density). All blades (Styles D-L) can be used with either cutter, unless noted.

Standard Cutter—At 11 1/2 oz., this steel cutter weighs significantly less than the heavy duty cutter. Designed for intermittent use. Temperature easily adjusts from 0° to 1050°F with a thumb control. Overall length is 9″. Includes one Style D blade. Operates on 150 watts, 115 VAC, and has an 11-ft. power cord with three-prong plug.

Heavy Duty Cutter—Can be used for continuous operation. Has a steel handle connected to a base unit by a 9 1/2-ft. cord. Cutter is 9″ long; base unit is 11 7/8″ Lg.×7 1/2″ Wd.×8 1/2″ Dp. Temperature adjusts from 220° to 1400°F. Includes one Style J blade. Operates on 500 watts, 115 VAC, and has a 6-ft. cord with three-prong plug.

Optional Cutting Sling with Blade—Easily mounts on cutters. Blade can be bent once into your desired shape.

Bench-Top Hot-Blade Cutter

This aluminum cutter has a 5″ long stainless steel blade that easily melts through woven and knitted synthetic materials (such as webbing, strapping, cord, ribbon, hook and loop, and rope) without fraying. The handle is insulated and reverses for right- or left-hand use.

Cutter has a 190-watt heater for efficient heating and an easy-to-read, variable-heat controller that adjusts the temperature up to 1000°F. Operates on 120 VAC and has a 6-ft. cord with three-prong plug. Size is 11½″ Ht. × 6″ Wd. × 15¼″ Dp.

7653A1 ..... $518.75

Foam and Insulation Cutters

Wood Handle

Polypropylene Handle

Rubber Handle

Excellent for cutting through insulation made of foam, fiberglass, and rock wool and similar materials. 49345A1 and *A4* have a steel blade; 49345A7 has a stainless steel blade. All include a storage pouch.

Handle	Blade Size, Lg. × Thick.		
Wood	6¾″ × 0.03″	**49345A1**	$27.73

Rubber	6¼″ × 0.12″	**49345A7**	14.27

Soft Plastic Foam Cutter

Cut tubular insulation material, soft boards, panels, and other plastic foams up to 2.36″ thick. This easy-grip cutter has a steel blade and a hinged blade guard. It comes with five replacement blades that store in the plastic handle. Overall size is 5½″ Lg. × 4⅝″ Ht.

Cutter	**3225A21**	**Each**	$29.92
Replacement Blades (10/Pkg.)	**3225A23**	**Pkg.**	$13.65

Food Service Knives

Wood Handles (A, C, G, J, L, T)—Blades are steel; Style G is stain-free steel.

Polypropylene Handles (B, D-F, H, K, M-S, U-X)—These synthetic handles resist bacteria, moisture, and grease. Blades are stain-free steel, unless noted. National Sanitation Foundation (NSF) certified.

Choose-a-Color—Textured for slip resistance. **To Order:** Please specify handle color: blue, green, red, or yellow.

Soft Grip—This comfortable grip reduces user fatigue.

Antimicrobial—An antimicrobial treatment is added to these handles for continuous protection against bacteria, mold, and fungus. Handles are also textured for slip resistance. Blades are made of steel and titanium and resist adhesives and corrosion.

Interchangeable-Blade Shop Knives

Curved Blade

Angled Blade

Aluminum/Rosewood Handle

Aluminum/Rubber Handle

Select the handle and blade that best fit your needs. Originally called mill and shoe knives, these knives cut cloth, canvas, leather, and rubber. The blades slide back into the handle and adjust to the cutting length you prefer. Blades and handles are sold separately.

Blades— Made of steel and 5/8″ wide. The *curved* blade can be positioned in either handle to expose ¼″ to 5″ of blade. The *angled* blade can be positioned in either handle to expose ¼″ to 8″ of it. At certain lengths blades will extend through the end of the handle.

Handles— All have a set screw for adjusting the blade length. *Aluminum/rubber* handle has a soft rubber-like material molded to the aluminum and is contoured to fit your hand for a more comfortable grip.

✓ Pouch not included. ● Has a ³⁄₁₆″ screwdriver bit. ▲ Has two bit holders with eight double-end bits. ♣ Has an open-frame handle.

Multitool and Mini Flashlight Combination

Similar to the 53835A64 (shown above), this folding-handle multitool with needle-nose pliers also includes a black nylon pouch and a pocket-size flashlight with a black aluminum body. Requires one AAA battery (included).

Folding-Handle Multitool	3247A46	Each	$77.37
Repl. AAA Batteries (4/Pkg.)	71455K62	Pkg.	$2.82

¼″ Hex-Bit Kit for Sliding-Head Tools

Fits sliding-head tools except 53835A44. Includes nine ¼″ hex-shaped bits: #1, #2, and #3 Phillips; ⅛″, ³⁄₁₆″, and ⁹⁄₃₂″ slotted; and 3 mm, 4 mm, 6 mm hex (also known as Allen). Includes a nylon pouch for the coupler and bits.

53835A34 ..... Each $15.76

Repl. Wire-Cutting Inserts for 53835A42 and A25

Includes two carbide inserts, four screws, and a wrench.

53835A46 ..... Pkg. $17.60

File/Plane Forming Tools

Shaver

Pocket Plane

Standard Plane

Cut and form wood, plaster, auto body filler, soft metals, and vinyl.

Shaver has a curved steel blade and a plastic handle. Blade cuts on the backward stroke.

Pocket plane has a cast metal body and a fine steel blade that cuts on the forward stroke.

Standard plane has a cast metal body and plastic handle. It comes with a flat steel blade that has an edge-cut feature for inside corner use. Blade cuts on the forward stroke.

Tools	Planing Wd.	O'all Size, Lg. × Wd.		
Shaver	1⅝″	7¼″ × 1⅝″	3758A15	$4.34
Pocket Plane	1⅝″	5⅝″ × 1⅝″	3758A11	7.88
Standard Plane	1⅝″	12½″ × 1⅝″	3696A1	16.05

Optional Half-Round Blade for Standard Plane			3696A3	5.63

Block and Bench Planes

Standard Block Plane

Bench Plane

Bases are cast iron; blades are chrome-plated steel. All planes have depth-of-cut and lateral-blade adjustment.

Block Planes— Best suited for small planing jobs and end-grain planing. The *standard* plane has a 21° cutting angle. The *low-angle* plane has a 13½° cutting angle. Both have a brass adjustment knob.

Bench Planes— Have a high-impact polymer handle and a brass adjustment knob.

	Planing Wd.	O'all Lg.	Planes		Repl. Blade	
Block Planes						
Standard	1⅝″	6⅜″	3693A6	$46.74	3693A13	$17.75
Low Angle	1⅜″	6¼″	3693A5	44.38	3693A12	9.91

For Trimming	2″	14″	3692A15	76.03	3692A22	15.70

Portable Electric Plane

Compact and lightweight, this plane is perfect for fast production planing and trimming. It has depth-of-cut adjustment and a D-shaped handle with trigger switch. Includes two reversible carbide blades and a carrying case. Overall length is 11¼″.

Plane is double-insulated and includes a 9-ft. power cord with two-prong plug. UL listed and meets OSHA requirements.

Planing Wd.	Planing Dp.	No Load Speed, rpm	VAC	Amps		Each
3¼″	3/32″	15,000	120	7.0	3228A25	$202.49
Replacement Blades					3228A22	Pair $11.79

Plastic-Handle Wood-Cutting Chisels

Great for rough cutting and finishing work. Blades and shanks are forged from a single piece of heat-treated steel and have a tempered bevel edge. Handles are high-impact plastic with a steel cap. Blade length is 3″; overall length is 8½″.

Chisels Cutting Wd.

12-Piece Carving-Tool Set

Carve patterns and designs in wood and other soft materials. Set includes two flat chisels (⅛″ and ½″ wide); five straight gouges (¾″, two ½″, and two ¼″ wide); ¼″ wide parting tool; ¼″ wide corner chisel; ⅛″ wide front bent chisel; ¼″ wide front bent gouge; and ¼″ wide veiner/straight gouge. Tools have a tempered and ground steel blade and a wood handle. Blade length is 5″; approximate overall length is 10″.

35965A22 ..... **Set** $141.58

Draw Knives

Straight Blade

Curved Blade

Knives have a wood handle on each side of the blade. Good for rough cutting and shaping wood. Blades are steel.

Knife with curved blade is great for forming contoured surfaces.

	Blade Size, Lg. × Wd.		
Straight Blade	10″ × 1⅜″	7087A11	$58.16
Curved Blade	8¾″ × 1⅜″	7087A13	67.15

Machetes

Have steel blades, durable nylon handles, and include a vinyl sheath.

18″ Lg. Blade	3955A21	$10.22
22″ Lg. Blade	3955A22	11.67

Metal-Cutting Chisels

Standard Head

Big Head

Also known as cold chisels, these chisels are forged steel. ***Big head*** chisels are easier to hit.

Nonscratching Plastic Scrapers

Scraper

Scraper/Knife

Angled Scraper/Knife

The sharp edge and plastic construction of these scrapers make them ideal for cleaning and scraping off sealant and gasketing without scratching the surface. Made of nylon with 33% glass reinforcement for extra strength and longer edge life. Color is blue.

4-piece set includes one of each scraper listed in the table.

Heavy Duty Machinist's Hand Scrapers

Flat

Curved

Get extra-smooth surfaces on slides, bearings, and surface plates with these tough metal scrapers. Blades are made of chrome-vanadium steel and are hardened to maintain a sharp cutting edge. Blades can be sharpened. They have an ultra-grip handle that provides a secure, comfortable grip.

	Blade, Wd. × Lg.	O'all Lg.		
Flat Blade	1 1/16″ × 3 7/16″	13¼″	3801A11	$30.80
Curved Blade	15/16″ × 3⅜″	14″	3801A12	40.42

Curved Bearing Scrapers

These scrapers leave no vibration marks, so they're perfect for scraping metal bearings, oil grooves, and babbitt metal. Blades are ground tool steel; handles are wood.

3-piece set includes one of each scraper listed in the table.

Blade, Wd. × Lg.	O'all Lg.		Each
½″ × 3″	10½″	3779A11	$27.51
⅝″ × 3½″	11″	3779A12	28.20

3-Piece Set		3779A1	Set $80.07

Adjustable-Blade Scrapers for Metal

A clamp on the shank of these scrapers allows you to easily adjust the blade length. Great for precision, uniform scraping of machine-tool dovetails, surface plates, and mating surfaces.

Scrapers have a solid steel body and a wood handle. They come with one carbide-tipped blade that easily cuts through materials as hard as alloy bronze. Blade is 1/16″ thick and requires sharpening before first use. Occasional touch-up sharpening will maintain its super-sharp edge.

Blade, Wd. × Lg.	O'all Lg.	Scrapers		Repl. Blade

Air-Powered Scraper

Scrape away gaskets, undercoatings, and other glued-on materials. Scraper has a chrome-plated steel handle and a steel blade with 45° bevel. Variable stroke speed is 0-4,800 strokes/min.; stroke length is 1/8″. Recommended operating pressure is 90 psi; average air consumption is 3 cfm. Recommended hose size is ⅜″; air inlet is ¼″ NPT female. Scraper comes with an external air regulator and one blade.

★ Blade is spring steel. ♦ Blade is Type 420 stainless steel. ♠ Blade is Type 410 stainless steel.

Premium Steel Scrapers

With a thicker carbon steel blade than on other scrapers, these scrapers have increased life and durability. ***Semistiff*** scrapers have tempered spring steel blades and hardwood handles. ***Stiff*** scrapers have forged steel blades and rosewood handles.

Scraper Type	Blade, Wd. × Lg.	O'all Lg.		
Semistiff	1″ × 4 1/2″	8 5/8″	3705A11	$23.50
Semistiff	2″ × 5″	9 1/8″	3705A12	25.59
Semistiff	3″ × 5″	9 1/8″	3705A13	27.55
Stiff	3″ × 4″	8 1/2″	3629A3	34.66
Stiff	4″ × 4 3/4″	9″	3629A5	36.09

Ceramic-Blade Scraper

Ceramic blade stays sharper longer than steel and won't rust. It's chemical resistant, nonmagnetic, and nonconductive. Handle is plastic. Blade is 2 1/8″ Wd. × 1 1/4″ Lg. O'all length is 6 3/4″.

35685A65 ..... $18.62

Flexible/Conformable Silicone Scraper

This one-piece silicone scraper has flat and curved edges that flex to fit tight areas and contoured surfaces. Size is 6″ Lg. × 3 1/2″ Wd.

To Order: Please specify color: blue or red.

6060A3 ..... $16.67

Disposable Plastic Putty Scrapers

Overall length is 7 1/4″.

FDA-Compliant and High-Temperature Plastic Scrapers

Standard

FDA-Compliant Scrapers—Can be sterilized, which makes them ideal for food-processing plants. Scrapers are polypropylene, nonsparking, chemical and corrosion resistant, and won't scratch metal surfaces. Resist heat up to 212° F intermittently.

Standard Scrapers—**To Order:** Please specify color: blue, green, red, white, or yellow.

Safety Scrapers—Are antistatic for the most hazardous applications. Color is green.

High-Temperature Scraper—Made of a glass-filled nylon for additional resistance to heat (up to 456° F) and chemicals. Color is blue.

Spatulas

Stainless Steel Straight Blade with Wood Handle

Stainless Steel Tapered Blade with Wood Handle

Copper Alloy Rounded Blade with Wood Handle

Nylon Straight Blade with Plastic Handle

Plastic Rounded Blade

Stainless Steel Blades—Also known as ink knives, these spatulas mix and spread paints, chemicals, and adhesives. Blades are Type 420 stainless steel and semiflexible except for 3660A19, which has a stiff blade. *Polypropylene handles* are white and NSF (National Sanitation Foundation) certified. *Vinyl handles* provide a nonslip grip and have high temperature resistance.

Copper Alloy Blades—Completely nonsparking, these spatulas are the ideal choice when accidental sparks could be hazardous. Blade is stiff and nonmagnetic.

Nylon Blades—Self-sharpening and won't absorb odors and bacteria. Perfect for food, printing, and paint process industries. Withstand heat up to 300° F intermittently. Spatulas with *stainless steel handles* have white blades. Spatulas with *plastic handles* have red, white, or yellow handles and blades. **To Order:** Please specify color.

Plastic Blades—Are disposable and have flexible blades. Withstand temperatures up to 180° F.

★ One blade tapers to 3⁄32″. ● One blade tapers to ⅛″.

About Selecting Band Saw Blades

1. Select a blade type based on the material and shape you plan to cut.

Materials	Shapes	Recommended Blade Type	Page
Steel, aluminum, brass	Solid rounds and rectangles, pipe, I-beams	General Purpose Band Saw Blades	2374
Steel	Pipe, I-beams, angle iron, tubing, bundles	Bimetal Band Saw Blades for Structural Shapes and Bundles	2378
Tool steel, mold steel, stainless steel	Solid rounds and rectangles, pipe, I-beams	Bimetal Band Saw Blades for Hard Metals	2376
Steel, stainless steel, aluminum, brass, bronze	Thin sheets and thin-walled pipe	Band Saw Blades for Thin Metals	2379
Steel, stainless steel, aluminum	Thick, solid rounds and rectangles	Bimetal Band Saw Blades for Thick Metals	2378
Tool steel, stainless steel, aluminum, titanium alloys	Solid rounds and rectangles, pipe, I-beams	High-Performance Bimetal Band Saw Blades	2380
Hardened steel, super alloys, graphite, composites, glass	Solid rounds and rectangles, pipe, I-beams	Carbide-Grit-Edge Band Saw Blades	2381
Quartz, silicon, ceramic, stone, glass, marble	Solid rounds and rectangles	Diamond-Grit-Edge Band Saw Blades	2381
Aluminum castings, fiberglass, composites, hardwood	Solid rounds and rectangles, bundles	Carbide-Tipped Band Saw Blades	2380
Hardwood, softwood, soft metals	Any	Band Saw Blades for Wood	2378
Rubber, cloth, plastic, foam, bread, meat	Any	Knife-Edge Band Saw Blades	2380

2. Select number of teeth per inch based on the thickness of your material.

Choose teeth per inch based on the thickness of the shape you plan to cut. For bundles, determine the teeth per inch for one piece and then choose one tooth per inch or teeth per inch range less.

More teeth per inch are for thinner materials, harder materials, and where the finish is most important. Fewer teeth per inch are for thicker materials, softer materials, and where speed of cut is most important.

Depending on the blade type you select, you may choose from anti-vibration or standard tooth styles.

Anti-Vibration— Teeth vary in size and number per inch and are set in the blade in a varying pattern (also known as variable set). They reduce vibration and handle a broader range of material thicknesses compared to standard tooth blades.

Standard— The number of teeth per inch is constant throughout the blade. Teeth are set in the blade in a constant pattern (also known as raker set).

Note: Teeth on Band Saw Blades for Thin Metals are set in a wavy pattern.

If material thickness is	ANTI-VIBRATION — Choose Teeth per Inch from Shaded Area								STANDARD — Choose Teeth per Inch from Shaded Area								
	3-4	4-6	5-8	6-10	8-12	10-14	14-18	20-24	3	4	6	8	10	14	18	24	32
0-5/32″								■									■

2 3/8″-3″	■	■							■	■							
3″-4″	■								■								
4″ and up	■								■								

3. Select blade width, length, and thickness.

Width— Most band saws accept only one blade width, though some accept a small range of blade widths. To choose between blade widths, measure the minimum radius you will need to cut. For tight turns and curves (small radius), choose narrower blades. For straighter cuts (large radius), choose wider blades.

If minimum cutting radius is	5/8″	1 7/16″	2 1/2″	3 3/4″	5 7/16″	7 1/2″	12″
Choose blade width	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″

Measuring minimum cutting radius:

Length— Varies by band saw size. See your band saw user's manual for determining the correct blade length.

Thickness— Thicker blades resist shock and damage better than thin blades, especially when cutting bundles, strut channels, and I-beams. Thinner blades create thinner cuts, which result in less material loss.

For information about band saw blades, see page 2373.

General Purpose Band Saw Blades

Cut a wide range of materials such as steel, aluminum, and brass of different shapes including solid rounds and rectangles, pipe, and I-beams.

***Anti-Vibration*—**Teeth vary in size and number per inch and are set in the blade in a varying pattern (also known as variable set). They reduce vibration and handle a broader range of material thicknesses compared to standard tooth blades.

***Standard*—**The number of teeth per inch is constant throughout the blade. Teeth are set in the blade in a constant pattern (also known as raker set).

Bimetal blades outlast hard-carbon steel and flex-carbon steel blades; they're great for straight and contoured cuts. ***Hard-carbon steel*** blades are better for straight cuts than ***flex-carbon steel*** blades, which are better for contoured cuts.

Anti-Vibration Bimetal—For straight and contoured cuts.

Also Available: Additional standard flex-carbon steel sizes. Please ask for 2404A1 and specify width, length, teeth per inch, and thickness.

For information about band saw blades, see page 2373.

Bimetal Band Saw Blades for Hard Metals

These blades have forward-angled teeth for cuts in hard metals such as stainless steel, tool steel, and mold steel with less pressure on the band saw. Use them on shapes including solid rounds and rectangles, pipe, and I-beams. All are made of bimetal, which is great for straight and contoured cuts.

Anti-Vibration— Teeth vary in size and number per inch and are set in the blade in a varying pattern (also known as variable set). They reduce vibration and handle a broader range of material thicknesses compared to standard tooth blades.

Standard— The number of teeth per inch is constant throughout the blade. Teeth are set in the blade in a constant pattern (also known as raker set).

Also Available: Additional sizes. Please ask for 1999A2 and specify width, length, teeth per inch, and thickness.

Band Saw Blades for Thin Metals

Also known as wavy set blades, these have teeth that are set in the blade in a wavy pattern for cutting metal sheets and thin-walled pipe.

Anti-Vibration—Teeth vary in size and number per inch. They reduce vibration and handle a broader range of material thicknesses compared to standard tooth blades.

Standard—The number of teeth per inch is constant throughout the blade.

Bimetal blades outlast hard-carbon steel and flex-carbon steel blades; great for straight and contoured cuts. Use them for most metals including steel, stainless steel, and aluminum.

Hard-carbon steel blades are better for straight cuts than ***flex-carbon steel*** blades, which are better for contoured cuts. Use hard-carbon steel and flex-carbon steel blades for soft metals such as bronze and brass.

Also Available: Additional sizes. Please ask for 2000A3 for bimetal, 2165A1 for hard-carbon steel, or 2406A1 for flex-carbon steel. Also specify width, length, teeth per inch, and thickness.

For information about band saw blades, see page 2373.

Bimetal Band Saw Blades for Thick Metals

A combination of extreme forward-angled teeth and plenty of space for chips to collect allows these blades to make clog-free cuts in thick cross sections of metals such as steel, stainless steel, and aluminum. Blades are anti-vibration with teeth that vary in size and number per inch. Teeth are set in the blade in a varying pattern (also known as variable set). All are made of bimetal, which is great for straight and contoured cuts.

Bimetal Band Saw Blades for Structural Shapes and Bundles

Penetrate steel structural shapes such as I-beams and angle iron as well as bundles of structural shapes and tubing with less feed pressure and tooth breakage. The teeth on these blades are forward-angled and reinforced. In addition, there's plenty of space for chips to collect, resulting in clog-free cuts. Blades are anti-vibration with teeth that vary in size and number per inch. Teeth are set in the blade in a varying pattern (also known as variable set). All are made of bimetal, which is great for straight and contoured cuts.

Band Saw Blades for Wood

Specially designed teeth make cutting hardwood and softwood easier. Blades cut any shape and have a constant number of teeth per inch. Teeth are set in a constant pattern (also known as raker set).

Blades for softwood are also known as skip-tooth blades and have extra space for softwood chips to collect, resulting in clog-free cuts. They are also for use on soft metals such as aluminum.

Blades for hardwood are also known as hook-tooth blades and have forward-angled teeth that dig into hardwood.

Hard-carbon steel blades are better for straight cuts than ***flex-carbon steel*** blades, which are better for contoured cuts.

Also Available: Additional sizes. Please ask for 2166A1 for hard-carbon steel for softwood, 2407A1 for flex-carbon steel for softwood, 2167A1 for hard-carbon steel for hardwood, or 2410A1 for flex-carbon steel for hardwood. Also specify width, length, teeth per inch, and thickness.

For information about band saw blades, see page 2373.

Bimetal Blades for Portable Band Saws

Choose from blades for general purpose use and blades for thin metals—sizes fit all standard portable band saws. Blades are ½″ Wd. × 0.020″ Thick. All are made of bimetal, which is great for straight and contoured cuts.

Anti-Vibration— Teeth vary in size and number per inch and are set in the blade in a varying pattern (also known as variable set), except for the teeth on blades for thin metals, which are set in a wavy pattern. All reduce vibration and handle a broader range of material thicknesses compared to standard tooth blades.

Standard— The number of teeth per inch is constant throughout the blade. The teeth are set in the blade in a constant pattern (also known as raker set), except for the teeth on blades for thin metals, which are set in a wavy pattern.

Teeth per In.	Tooth Style	3 ft. 8⅞″ Long	Each	4 ft. 5¾″ Long	Each
General Purpose					
10-14	Anti-Vibration	4051A15	$7.48	4051A24	$11.04
10	Standard	4051A11	7.48	4051A27	11.04
14	Standard	4051A12	7.48	4051A22	11.04
For Thin Metals					
14-18	Anti-Vibration	4051A26	$7.48	4051A28	$11.59
18	Standard	4051A13	7.48	4051A23	11.48
20-24	Anti-Vibration	4051A33	7.65	4051A31	11.59
24	Standard	4051A14	7.48	4051A29	11.04

Band Saw Blade Coil Stock

Create custom-length band saw blades from coil stock that meets your application needs. Cut stock to length and use a band saw welder to join the ends. All stock comes in 100 ft. coils except where noted.

Anti-Vibration— Teeth vary in size and number per inch. They are set in the blade in a varying pattern (also known as variable set), except for the teeth on blades for thin metals, which are set in a wavy pattern. All reduce vibration and handle a broader range of material thicknesses compared to standard tooth blades.

Standard— The number of teeth per inch is constant throughout the blade. The teeth are set in the blade in a constant pattern (also known as raker set), except for the teeth on blades for thin metals, which are set in a wavy pattern.

Bimetal blades outlast hard-carbon and flex-carbon steel blades and are great for straight and contoured cuts. ***Hard-carbon steel*** blades are better for straight cuts than ***flex-carbon steel*** blades, which are better for contoured cuts.

Band Saw Blades

For information about band saw blades, see page 2373.

High-Performance Bimetal Band Saw Blades

The TiAlN (titanium aluminum nitride) coated, precision-ground teeth on these blades are long-lasting and provide a smooth finish at fast speeds. Use them to cut most metals including stainless steel, titanium alloys, nickel alloys, tool steel, brass, and aluminum of different shapes such as solid rounds and rectangles, pipe, and I-beams.

All blades are anti-vibration with teeth that vary in size and number per inch. Teeth are set in the blade in a varying pattern (also known as variable set). All blades are made of bimetal, which is great for straight and contoured cuts.

Carbide-Tipped Band Saw Blades

Wear-resistant and great for cutting aluminum castings, fiberglass, composites, and hardwood, the teeth on these blades are carbide-tipped and forward-angled. Use them on solid rounds and rectangles as well as bundles. They have a constant number of teeth per inch, and teeth are set in a constant pattern (also known as raker set).

Also Available: Additional sizes. Please ask for 4189A999 and specify blade width, length, teeth per inch, and thickness.

Knife-Edge Band Saw Blades

Cut various nonmetallics of any shape. Blades are made of high-carbon spring steel. All are welded unless noted.

Scallop-edge blades cut materials such as rubber, paperboard, fiberglass insulation, and cloth as well as bread and boneless meat. The blades make smooth, quick cuts with minimal dust. All have a standard ½″ pitch (distance from point to point).

V-tooth-edge blades cut materials such as plastic, plastic film, foam rubber, filter media, sponge, and meat products. They're designed for long life and quick, accurate cuts. All have 14 teeth per inch, unless noted.

♦ Coil stock; ends are not welded. ★ Has 10 teeth per inch.

Also Available: Additional sizes. Please ask for 4091A999 and specify blade style (scallop edge or v-tooth edge), width, length, teeth per inch (v-tooth edge only), and thickness.

For information about band saw blades, see page 2373.

Carbide-Grit-Edge Band Saw Blades

Carbide grit is bonded to these alloy steel blades to cut through hard materials such as nickel alloys, hardened steel, graphite composites, and glass. Use finer grit for less material loss and a smooth finish; use coarser grit for fast cutting. *Note:* Use coolant (not included, see page 2179) when cutting metals, glass, and similar materials.

Gullet Style

Continuous Style

Gullet Style— For materials that are at least 1/4″ thick.

Continuous Style— For materials that are less than 1/4″ thick. They're also for use on brittle materials and whenever chipping is a concern.

Lg.	Wd.	Thick.	Grit Size	Gullet Style	Continuous Style	Each

● Coarse grit.

Diamond-Grit-Edge Band Saw Blades

The diamond-grit edge on these stainless steel blades makes them last 10 times longer than carbide-grit-edge blades when cutting hard materials such as carbon fiber, quartz, silicon, ceramic, stone, glass, and marble. Plus, these blades make precise cuts with minimal material loss. Use finer grit for less material loss and a smooth finish; use coarser grit for fast cutting. All blades are continuous style for use on a wide range of material thicknesses.

Note: Not for metal. Use coolant (not included, see page 2179) when cutting quartz, silicon, stone, and glass.

Portable Cordless Band Saws

Why bring your material to your saw when you can bring your saw to your material? Saws accept 1/2″ wide blades and are furnished in a plastic carrying case.

Lightweight— Great for small cutting jobs in hard-to-reach places, this saw weighs only 9 lbs. and has a quick-release lever for easy blade changes. Saw cuts angle iron, PVC, conduit, rebar, and wood. Includes one 2′8 7/8″ Lg.×1/2″ Wd.×0.020″ Thick. bimetal blade with 14-18 teeth per inch, two 18-volt NiCad batteries, and a battery charger.

Milwaukee 0729-21— Just as powerful as a corded electric tool, this saw runs on a 28-volt battery and cuts through metal and wood. Includes one 3′8 7/8″ Lg.×1/2″ Wd.×0.020″ Thick. bimetal blade with 14 teeth per inch, a 28-volt lithium-ion battery, and a battery charger. Run time is displayed on a battery fuel gauge. UL listed and meets OSHA requirements.

Optional 15″×11″ cutting table converts 4133A11 into a benchtop saw.

Optional 15″×11″ Cutting Table for Lightweight Saw ..... 4133A31 Each $99.98

Portable Electric Band Saws

Carry these saws to your job site to cut wood and most metals. Saws accept 1/2″ wide blades (not included, unless noted). They operate on 120 VAC and have an 8-ft. power cord with a three-prong plug. UL listed and meet OSHA requirements. Saws are also CSA certified, except 40065A12 and A15, which are C-UL listed. Furnished in a plastic carrying case.

Stand has a chain vise to hold your material. Use to convert saw for bench-top use, or add 3/4″ diameter pipe (with threaded end) for legs.

Blade is 3′8 7/8″ Lg.×1/2″ Wd.×0.020″ Thick. bimetal with 14 teeth per inch.

Also Available: Replacement parts. Please ask for 40065A888 for Milwaukee or 4006A888 for DeWalt; then specify the manufacturer number of the saw and the replacement part needed.

Blade for All Saws ..... 4051A12 Each $7.48

♣ No. in parentheses is model No. shown on tool nameplate. ♦ Includes a 3′8 7/8″ Lg.×1/2″ Wd.×0.020″ Thick. bimetal blade with 18 teeth per inch.

Heavy Duty Vertical Band Saws

Tackle your heavy production work. These saws have a smooth table surface that tilts 12° left, 15° right, and 8° front and back. They also have a built-in blade welder, a magnetic starter, an adjustable blade guard, and a material guide.

The ***saw for metal*** has a blade wheel diameter of 14″ and accepts 1/8″ to 1/2″ wide blades. Includes a 9′6″ Lg.×1/4″ Wd.×0.025″ Thick. bimetal blade with 14-18 teeth per inch. It has a 1-hp motor and operates on 115/230 VAC, 60 Hz, 1 ph. Wired for 115 VAC. No-load blade speed is 82-330 sfpm.

The ***saw for metal and wood*** has an extra-wide range of blade speeds, allowing you to cut both metal and wood. Blade wheel diameter is 16″. Accepts blades 1/8″ to 5/8″ wide and includes a 10′3 1/2″ Lg.×1/4″ Wd.×0.025″ Thick. bimetal blade with 10-14 teeth per inch. It has a 2-hp motor and operates on 230/460 VAC, 60 Hz, 3 ph. Wired for 230 volts. No-load blade speeds are 82-330 sfpm for metal and 985-3,950 sfpm for wood.

Also Available: Replacement parts for both saws. Please ask for 4182A999 and specify the McMaster-Carr part number of the saw and the replacement part needed.

Band Saws for Metal

A

B

C

D

Maintain stability and power when cutting through metals. All saws are single phase and include an adjustable stop for material being cut, auto shut-off after cutting (unless noted), and a 6-ft. cord with three-prong plug.

***A* Bench-Top Horizontal Dry Band Saws—**They may be small, but these saws are the most powerful of all our band saws for metal. Both saws accept 1/2″ wide blades. *Note:* Saws do not have auto shut-off. 4180A11 overall size is 33 1/2″ Lg.×32 3/4″ Wd.×23 1/2″ Max. Ht. Saw includes a 4′8 3/4″ Lg.×1/2″ Wd.×0.025″ Thick. bimetal blade with 8-12 teeth per inch. 4180A12 overall size is 42 1/2″ Lg.×29 1/2″ Wd.×31 1/2″ Max. Ht. Saw includes a 5′8 1/4″ Lg.×1/2″ Wd.×0.035″ Thick. bimetal blade with 6-10 teeth per inch.

- Variable-speed motor with digital speed regulator: 4180A11 is 1.7 hp; 4180A12 is 2.7 hp
- Manual feed system
- Adjustable ball bearing blade guides; meet OSHA requirements
- Fixed vise and a swiveling head for angle and miter cutting: 4180A11 is for 0°-60° angles; 4180A12 is for 0°-45° angles.
- Aluminum blade wheels: 4180A11 has a 7 1/8″ diameter rear and 6 1/4″ diameter front; 4180A12 has 10″ diameter rear and front.

***B* Horizontal and Vertical Dry Band Saw—**Overall size of this light duty saw is 44″ Lg.×19″ Wd.×57″ Max. Ht. Saw accepts 1/2″ wide blades and includes a 5′4 1/2″ Lg.×1/2″ Wd.×0.025″ Thick. bimetal blade with 14 teeth per inch.

- Three-speed, open dripproof, 1/2-hp motor with underside cooling vents; UL listed
- Coil-spring assisted feed system
- Adjustable ball bearing blade guides; meet OSHA requirements
- 9 5/8″×9 1/2″ vertical work table; stand with wheels
- 0°-45° vise for angle and miter cuts
- Cast iron 7 3/8″ diameter blade wheels
- 25 1/2″ from floor to table

Also Available: Replacement parts. Please ask for 4204A888 and specify part needed.

***C* Horizontal and Vertical Wet/Dry Band Saws—**Overall size is 50″ Lg.×18″ Wd. x 62″ Max. Ht. Both saws accept 3/4″ wide blades and include a 7′9″ Lg.×3/4″ Wd. x 0.035″ Thick. carbon steel blade with 10 teeth per inch.

- Four-speed, fan-cooled, 3/4-hp motor; conforms to NEMA specifications
- Hydraulic feed system
- Adjustable ball bearing blade guides; meet OSHA requirements
- 9 1/2″×10″ vertical work table; enclosed stand with wheels
- 0°-45° vise for angle and miter cuts
- Cast iron 11 7/16″ diameter blade wheels
- 23 1/2″ from floor to table
- Steel, heat-treated worm drive with bronze gears in an oil bath
- Coolant system with 3-gpm pump and a 1-gallon reservoir (coolant not included, see page 2179)

Also Available: Replacement parts. Please ask for 4164A888 and specify part needed.

***D* Horizontal Wet/Dry Band Saws—**Choose from saws with a swiveling vise or a swiveling head. Overall size is 79″ Lg.×31″ Wd.×68″ Max. Ht. Both saws accept 1″ wide blades and include an 11′3″ Lg.×1″ Wd.× 0.035″ Thick. bimetal blade with 4-6 teeth per inch.

- Variable-speed, fan-cooled, 1 1/2-hp motor with magnetic start and overload protection
- Counterbalanced, gravity feed system
- Blade guide assembly with six contact points for accurate cuts; meets OSHA requirements
- 42125A45 has a three-jaw, 0°-45° vise for angle and miter cuts. 42125A48 has a fixed vise and a swiveling head for 0°-45° angle and miter cuts; great when workspace around the saw is limited.
- Cast iron 14″ diameter blade wheels
- 42125A45 is 23 1/2″ from floor to table; 42125A48 is 25 1/2″ from floor to table
- Swivel control panel allows access to machine controls from any angle
- Worm drive with hardened and ground gears in an oil bath
- Coolant system with a 1-gpm pump and an 8-gallon reservoir (coolant not included, see page 2179)

Also Available: Replacement parts. Please ask for 42125A888 and specify part needed.

Medium Duty Vertical Band Saw for Metal and Wood

Versatile enough to cut wood, plastic, bakelite, composites, and most metals, this saw runs at multiple blade speeds. It has a steel base for stability, a 14″×14″ cast iron table that tilts 10° left and 45° right, and a miter gauge. Cutting capacity is 13 1/2″ deep and 6″ high. Blade wheel diameter is 14″. Saw accepts 1/8″ to 3/4″ wide blades. Includes a 7′8 1/2″ Lg.×3/8″ Wd.×0.025″ Thick. bimetal blade with 14 teeth per inch.

Motor is 1 hp and operates on 115 VAC, 60 Hz, single phase. Includes a 6-ft. cord with three-prong plug. No-load blade speeds for metal are 39, 57, 78, 107, 142, 196, and 278 sfpm; no-load blade speed for wood is 3,300 sfpm. Floor to table measures 44″. Overall size is 20″ Lg.×16″ Wd.× 68″ Ht. Weight is 280 lbs.

		Each
Band Saw	**4120A11**	$1,633.08
Replacement Blade	**4179A963**	32.74
Optional Material Guide (Rip Fence)	**4120A32**	121.67

Vertical Band Saw for Glass, Stone, and Ceramics

The grinding action of the diamond-grit blade on this saw creates a smooth finish on hard materials such as glass, ceramic, phenolic, stone, tile, brick, fiberglass, composites, and printed circuit boards. A recirculating tap water coolant system provides a longer blade life. *Note:* Not for cutting metal.

Saw is molded plastic and has a 12″×12″ table. Blade wheel diameter is 5″ top and 6″ bottom. Accepts 1/4″ wide diamond grit blades and includes a 3′1″ Lg.×1/4″ Wd.×0.020″ Thick. diamond-grit blade. Motor is 1/3 hp and operates on 110 VAC, 50/60 Hz, single phase. Cutting capacity is 5″ Dp.×3″ Ht. No-load blade speed is 3,520 sfpm. Coolant tank holds 16 oz. water. Overall size is 13 1/2″ Lg.×14″ Wd.×17 1/2″ Ht. Weight is 16 lbs.

		Each
Band Saw	**39725A11**	$371.83
Replacement Blade	**39725A15**	55.00
		Per Pkg.
Replacement Blade Guides (4/Pkg.)	**39725A14**	$6.50

Vertical Band Saw Blade Guards with Light

Increase safety and visibility with these blade guards that have a built-in light. Made of clear acrylic, guards attach to your band saw blade's support arm at an angle to minimize glare. Operate on 120 VAC and have a 7½-ft. cord with leads for hardwiring to your saw's on/off switch. Mounting hardware included.

Guard for 10″ to 16″ vertical band saws fits most saws with 10″ to 16″ blade wheel diameter including Atlas, Craftsman, Delta, Homecraft, J-Line, Powermatic, Vega, Walker Turner, Wells, and Yates American. ***Guard for 18″ to 36″ vertical band saws*** fits most saws with 18″ to 36″ blade wheel diameter, including Delta, Delta Rockwell, Grob, Monarch, Powermatic, and Walker Turner.

		Each
Guard for 10″ to 16″ Vertical Band Saws	**4720A11**	$141.73
Guard for 18″ to 36″ Vertical Band Saws	**4720A12**	141.73

Band Saw Blade Tension and Alignment Gauges

Ensure that your blades are tensioned properly and square to the cut. ***Tension gauge*** measures up to 60,000 psi and 4,000 kg per cm^2 and also works with power hacksaws. ***Alignment gauge*** keeps blades straight between guides.

Tension Gauge

Alignment Gauge

		Each
Tension Gauge	**4177A11**	$435.44
Alignment Gauge	**4177A12**	80.18

Adjustable Band Saw Fence

Keep your material in line with your band saw blade. This fence mounts on your band saw table and adjusts to your blade's angle for a precise cut every time. Plus, the fence's top and face have T-slots for adding accessories. For use on most band saws with a 14″ diameter blade wheel, including Jet, Delta, General, and Grizzly models. Fence is 18″ long and made of aluminum.

Comes with a 26″ long aluminum mounting rail with hardware to bolt the fence to your band saw table.

Fence with Optional Adjustment Dial

Optional adjustment dial allows you to make adjustments to the fence to give the most accurate cut.

Band Saw Fence	**5152A53**	**Each**	$129.98
Optional Adjustment Dial	**5152A62**	**Each**	$16.24

Band Saw Wheel Cushions

Reduce blade slippage and preserve tooth shape by placing one of these cushions on your band saw wheel. Also known as band saw rubbers and band saw tires, these 3⁄16″ thick cushions are made of neoprene rubber. Install with glue, rubber cement, or rubber adhesive (see 7509A73 on page 3417) and trim width with a razor blade. *Note:* All are undersized by approximately 20% for a stretched fit.

Vertical Band Saw Blade Guides

Single Wheel

Dual Wheel

Adjustable for various blade widths and thicknesses, these blade guides adapt for right- and left-hand mounting near the top or bottom blade wheel. An inner backup wheel controls backward blade motion. Mounting holes on the back of each guide fit onto your saw's mounting stud, and set screws lock the guide in place. Replacement studs are sold separately below. *Note:* Saw modifications may be necessary for installation.

Single Wheel— Designed for contour-cutting applications in wood and nonferrous metals such as bronze and brass. All have PTFE-impregnated support blocks for maximum blade support near the cutting edge.

Dual Wheel— The choice for high-load operations, this dual-wheel guide offers excellent support for all cutting applications. It has permanently sealed and lubricated ball bearing support wheels.

Bimetal Reciprocating Saw Blade Assortments

All include bimetal blades for a variety of applications.

Standard Assortment— This 10-piece assortment includes one 6″ long (7 teeth per inch) blade for wood as well as four 4″ long (6, 10, 18, and 24 teeth per inch) and five 6″ long (5-8, 10, 14, 18, and 24 teeth per inch) blades for metal, plastic, laminates, and wood with nails.

4034A22 ..... **Each** $19.15

Heavy Duty Assortment— This 30-piece assortment includes five 6″ long (5-8 teeth per inch) blades for nail-embedded wood as well as ten 6″ long (6 teeth per inch) and fifteen 6″ long (five each of 10, 14, and 18 teeth per inch) blades for up to 18-gauge thick metal. Furnished in a black plastic case.

4034A25 ..... **Each** $70.42

Demolition Assortment— This 27-piece assortment includes fifteen 6″ long (five each of 5-8, 6, and 10 teeth per inch) blades for nail-embedded wood and metal, as well as four 6″ long (6 teeth per inch) and eight 6″ long (10 teeth per inch) blades for any type of demolition job. Furnished in a black plastic case.

4034A35 ..... **Each** $81.72

Heavy Duty Assortment

Reciprocating Saw Accessories

Turn your ordinary reciprocating saw into a multipurpose tool with these accessories. Designed to fit most saw brands.

Flush-cut adapter offsets the blade 1½″ to allow flush cuts in hard-to-reach areas. Overall length is 6½″.

Blade extensions reach into difficult spots.

Wood rasp is great for fast wood removal and shaping.

Diamond-grit blade cuts, sands, and grinds hardened steel pipe, bars, and bolts as well as reinforced concrete.

Masonry blades cut and sand reinforced concrete, rock, composites, brick, and fiberglass, unless noted.

★ Not for reinforced concrete or fiberglass.

Flush-Cut Adapter

Wood Rasp

Masonry Blade

1/2″ Universal-Shank Reciprocating Saw Blades

Don't worry about compatibility with your saw—the 1/2″ shank on these blades fits in most common reciprocating saws. Choose blades with more teeth per inch for a smooth finish; choose blades with fewer teeth per inch for fast, rough cutting.

Blades for multiple materials are for general purpose use on a wide range of materials. ***Blades for metal*** and ***blades for wood*** last longer than blades for multiple materials on metal and wood, respectively. ***Heavy duty blades for metal*** last longer and cut faster than blades for metal.

Bimetal blades have a tough cutting edge that's made of high-speed steel (unless noted) with a flexible backing that resists shattering and wear.

Bimetal blades with TiN (Titanium Nitride) coated edge have improved wear resistance resulting in longer blade life.

Carbide-tipped and *carbide-grit blades* are perfect for hard-to-cut materials. *Carbide-tipped blades* have teeth with tips made of carbide. Instead of teeth, *carbide grit blades* have tungsten carbide grit bonded to the edge of an alloy steel blade.

Style A— A flat-top design makes these stiffer than other blades, resulting in straighter cuts.

Style B— Blades taper to a point for plunging directly into the material rather than cutting from the side (also known as plunge cutting).

Style C— Teeth are V-shaped allowing for cuts on the forward and backward strokes of the saw; great for faster cuts in plaster and drywall.

Style D— Blades are short and narrow for tight-curve cuts (also known as scroll-cutting).

Styles E&F— Also known as demolition blades, these are thicker and wider for cuts through multiple layers of materials. *Style E* is best for straight cuts and *Style F* is best for plunge cuts.

Milwaukee Reciprocating Saws

Electric

Cordless (4596A6)

Cordless Hatchet (4596A21)

Cordless (24795A11 and A7)

These heavy duty saws have a variable-speed motor and a Quik-Lok keyless blade-change system, so you don't need tools to change blades. All accept ½″ Universal-Shank Reciprocating Saw Blades (see pages 2384-2385) and include a carrying case. Saw blades are sold separately (unless noted). UL listed, CSA certified (unless noted), and meet OSHA requirements.

Electric saws have an adjustable shoe-release lever for control of cutting depth (unless noted). They are furnished with a power cord and plug. 4011A83 has a counter-balance mechanism to reduce vibration, a trigger control to adjust speed, and an advanced gear system to power through tough materials. 4011A81 has a switch for fast, full-orbital cutting action as well as a counter-balance mechanism to reduce vibration, a dial selector to adjust speed, a detachable Quik-Lok power cord for easy replacement and storage, and an advanced gear system to power through tough materials.

Cordless saws are furnished with a trigger control to adjust speed, two batteries, and a charger (unless noted). 4596A6 is compact, which allows cutting in tight spaces and on awkward angles. It has a battery fuel gauge and a built-in LED light to illuminate the work surface. 24795A7 includes 28-volt batteries that are 40% more powerful and last twice as long.

Portable Air-Powered Saws

Make straight-line and tight-curve cuts in many materials. All are for use with 3/8″ ID air hose.

A Economy Mini Reciprocating Saw— Good for occasional use, this saw has a front-end bottom exhaust and lockout throttle lever to prevent accidental starting.

Includes two 3 3/8″ long bimetal blades. Recommended air pressure is 90 psi; air consumption is 16 cfm. Air inlet is 1/4″ NPT female.

B Mini Reciprocating Saw— Get precision cutting from this compact saw. Double-lock throttle lever prevents accidental starting. Rear exhaust system vents air away from your work.

Includes two 3 1/2″ long, 32 teeth per inch high-speed steel blades, an air hose with fitting, a hex key wrench, and a 1/4″ reducer bushing. Additional bimetal blades are sold separately below. Recommended air pressure is 85 psi; air consumption is 10.2 cfm. Air inlet is 1/4″ NPT female.

C D-Handle Hacksaw— This variable-speed saw will cut anything a hand hacksaw can with less effort. Use it in liquids including water, oil, and slurries—it won't be damaged if it stalls. A self-lubricating system oils all moving parts, and the handle has a speed-control valve that adjusts cutting speed. Saw has a front exhaust.

Includes ten 12″ long bimetal blades, lubricating oil, and a metal carrying case. Recommended air pressure is 90-110 psi; air consumption is 6 1/2 cfm. Air inlet is 1/4″ NPT male. Meets OSHA requirements.

Large-Capacity Air-Powered Hacksaw

Great for cutting pipes, angle iron, and other structural shapes. Saw has a cast aluminum gear case, a side exhaust system, and a safety off switch. It's furnished with two 12″ long, 16 teeth per inch high-speed steel blades; assorted wrenches; front handles; and a hose coupling. Recommended air pressure is 86 psi; air consumption is 51 cfm. Air inlet is 1″ NPT male. Use with air hose at least 1/2″ ID.

Chain clamps attach the saw to pipe for demolition work.

Extension chains are for use with 3990A13 chain clamp. Maximum material thicknesses are listed.

Work support is for freehand work and cutting corrugated sheet metal.

Saw blade guide works on material up to 12 3/4″ dia. with blades up to 20 3/4″ long.

RotoZip Spiral Saws

The unique rotary action of the cutting bit on these saws allows you to plunge-cut directly into your material. Saws cut wood, composites, ceramic tile, acoustical tile, drywall, fiberglass, and plastic, unless noted. Handles are removable and have built-in storage. All saws are double insulated; operate on 120 VAC, 50/60 Hz; and include a 10-ft. cord (unless noted) with two-prong plug.

Model No. RZ01-1300 (RZ1) includes two bits, three collets (1/8″, 5/32″, and 1/4″), and one wrench. Saw cuts wood, drywall, and fiberglass.

Model No. RZ1500-30 (RZ1500) includes two bits, three collets (1/8″, 5/32″, and 1/4″), one wrench, a circle cutter attachment, an 8-ft. cord, and a canvas tool bag.

Model No. RZ2000-55 (RZ2000) includes three bits, one wrench, a right-angle cutoff attachment, three cutoff wheels, a guard attachment, an accessory storage case, and a canvas tool bag.

Right-angle cutoff attachment starter kit converts the spiral saw into a cutoff saw. **To Order:** Please specify model number.

Jigsaw Blades

T-Shank

U-Shank

U-Shank w/Progressive Teeth

Hook Shank

Our jigsaw blades are offered in three shank styles to fit most jigsaws: T-Shank, U-Shank (also known as Universal Shank), and Hook Shank. *Note:* Check your jigsaw to see which shank style you need.

Choose blades with more teeth per inch for a smooth finish; choose blades with fewer teeth per inch for fast, rough cutting. Blades with progressive teeth have small, fine teeth at the shank end that gradually increase to large teeth at the tip for maximum versatility. Recommended uses for blades are based on blade and tooth design.

Carbon steel blades are good for occasional use and for cutting wood and soft materials.

High-speed steel blades are tougher and last longer than carbon steel blades.

Bimetal blades have a tough cutting edge that's made of high-speed steel and welded to a strong, flexible backing that resists shattering and wear. They last longer than high-speed steel and carbon steel blades.

Carbide-tipped, carbide-grit, and ***diamond-plated blades*** are perfect for hard-to-cut materials. ***Carbide-tipped blades*** have teeth with tips made of carbide. Instead of teeth, ***carbide-grit blades*** have tungsten carbide grit bonded to the edge of an alloy steel blade. Use finer grit blades for less material loss and a smooth finish; use coarser grit blades for faster cutting. ***Diamond-plated blades*** slice through tough materials that destroy other blades.

All saws have a quick-change blade system and bases that tilt 45° for angle cutting. Blades can be set in four positions—from straight-line reciprocating to small, medium, and full-orbital action. All have a variable-speed motor, include a carrying case, and are UL listed.

For replacement blades, see page 2388 and the top of this page.

A-F Electric Saws— All are double-insulated, operate on 120 volts, 50/60 Hz, and have a power cord with two-prong plug.

Style A includes two blades.

Style B includes one T-shank blade.

Styles C-E have a speed-control dial, a lock button, and include one blade. All are designed for low vibration and have a precision-machined plunging mechanism for increased accuracy and smooth operation.

Style F includes three blades.

G Cordless Saw— Has an adjustable dust blower and comes with an 18-volt/2.4 amp-hr. battery, a one-hour charger, and two blades.

Hacksaw Blades

Choose blades with more teeth per inch for thin, hard materials; choose fewer teeth per inch for thick, soft materials. All blades cut most materials including metal, plastic, and wood, unless stated otherwise.

High-Speed Bimetal Plus—Teeth are ground into a forward angle, which increases cutting efficiency by 30% compared to other bimetal blades. Blades are virtually unbreakable and have a high-speed steel cutting edge welded to a flexible alloy steel backing.

High-Speed Bimetal—You'll get excellent cuts along with great wear resistance and flexibility. Blades have a high-speed steel cutting edge welded to a flexible spring steel backing.

High-Speed Steel Flexible—These blades combine an unhardened center for flexibility with a hardened tooth edge for smooth cuts.

Carbon Steel Flexible—Great for general purpose cuts in mild steel, copper, aluminum, brass, plastic, wood, and other soft materials.

● Package quantity is 5. ■ Blade has varying teeth per inch.

Carbide-Grit Hacksaw and Rodsaw Blades

Hacksaw Blade

Rodsaw Blade

Made of carbide-grit particles bonded to an alloy-steel backing, these blades cut hard, abrasive materials that standard and bimetal blades can't handle. They'll fit most standard hacksaw frames.

Hacksaw blades are for use on case-hardened steel, cable, chain, masonry, ceramics, and glass.

Rodsaw blades have the added benefit of cutting in any direction, making them great for contour cutting. Use them on metal bolts, thin-walled pipe, and tubing as well as ceramics, glass, and fiberglass.

Hacksaw Blades					Rodsaw Blades		
Lg.	Wd.	Thick.		Each	Dia.		Each

12″	¾″	0.025″	4025A11	3.96	0.100″	4127A14	3.56

Bimetal Blades for Power Hacksaws

Shatter resistant and great for high-speed applications, these blades are for use with power hacksaws. They have a high-speed steel cutting edge and durable alloy steel backing.

Hacksaws

Choose from a wide range of hacksaw frame styles. All include one blade that cuts metal, plastic, and wood, unless noted.

A Light Duty—Frame is steel and holds blade at four different cutting positions: up, down, 90° left, and 90° right. Handle is plastic. Saw is adjustable for holding 10″ and 12″ long blades; it includes one 10″ long bimetal blade.

B Standard Duty—Has a cushion-grip handle and blade storage in the frame. Blade tension is adjustable. Frame is aluminum and steel and holds blade straight or at 45°. Saw accepts 12″ long blades; it includes one bimetal blade.

C Heavy Duty—Cushion-grip handle and front-end body design provide stable, nonslip operation. Blade tension is adjustable. Frame is aluminum and steel and holds blade straight or at 55°. Saw accepts 12″ long blades; it includes one bimetal blade.

D Straight Handle—Reaches 4½″ into a ¾″ hole and makes straight cuts. Has a plastic handle and a clamping hub that hold the blade firmly in place. Accepts 10″ long blades and includes one carbon steel blade for soft metals.

E Tight Spot—Cuts flush where other saws can't. Frame is aluminum and has a clamping screw to hold blade firmly for straight cuts. Accepts any length blade; it includes one 10″ long bimetal blade.

F Mini Frame—Has a small aluminum frame with a chipproof plastic inset handle and a tapered nose to fit hard-to-reach spots. Great for cutting steel wire. Blade rotates on a hex mount to cut up, down, 90° left and right, and 135° left and right. Accepts 6″ long blades (see 4202A18 blades sold separately below) and includes one bimetal blade.

Handsaws

Standard

The teeth on these saws are sharpened on three sides for fast, accurate cuts. Blades are made of high carbon steel. Use for cutting wood and plastic.

Standard—Has a hardwood handle.

Heavy Duty—Has a 15% thicker blade than standard saw that reduces bending and makes straighter cuts. A slip-resistant rubber grip is molded over the wood handle.

Easy Grip—Has a comfortable plastic handle.

Big Grip—Has a hardwood handle with a large opening that's perfect when you're wearing gloves.

	Blade Lg.	Teeth per Inch	O'all Lg.		Each
Standard	15″	9	18½″	4058A45	$14.31
Heavy Duty	15″	9	18″	4058A51	17.93
Easy Grip	20″	12	24½″	4058A61	23.12
Big Grip	26″	12	29″	4088A71	25.94

Miter Box Saw

Durable and accurate, this miter box saw has a solid one-piece aluminum frame with guide rods that keep the saw parallel to your material. Angles are set at 90°, 75°, 67.5°, 60°, 54°, and 45° left and right. Saw includes a 22″ Lg. × 1½″ Wd., 14 teeth per inch, carbon steel wood-cutting blade and a material clamp.

Table is 14½″ × 4¼″. Max. cutting height is 4½″; max. cutting width is 4″ at 45° and 6½″ at 90°. Overall length is 27¾″.

		Each
Miter Box Saw	4201A48	$49.94
Replacement Saw Blade	4201A55	10.90

Specialty Handsaws

All handsaws have steel blades and wood handles, unless noted.

A Thin Finishing Saw—Has a thin (0.020″ thick) blade with two working edges: one with fine teeth for precision cross-cutting and the other with medium teeth for rip cutting. Handle is plastic and has a slip-resistant rubber grip.

Blade Lg.	Teeth per Inch	O'all Lg.		Each
10″	18	23″	4012A1	$31.43
Replacement Blade			4012A2	19.46

B Razor Saw—Has an ultra-thin (0.008″ thick) brass-backed stainless steel blade for cutting rod, thin tubing, and delicate parts made of wood, plastic, and soft metal.

Blade Lg.	Teeth per Inch	O'all Lg.		Each
5⅛″	60	9¼″	4163A11	$21.86
Replacement Blade			4163A12	11.07

C Folding Pocket Saw—Folds like a jackknife to 8″ long. Accepts any 6″ long reciprocating saw blade (see pages 2384-2385); includes a wood-cutting blade. Handle is plastic.

Blade Lg.	Teeth per Inch	Open Lg.		Each
6″	10	13″	6918A75	$10.57

D&E Drywall/Wallboard Saws—Points are sharp for easy plunge cuts. Blades are not replaceable. 4040A11 has carbide-tipped teeth. 2171A11 has teeth on both sides and a rubber handle.

	Blade Lg.	Teeth per Inch	O'all Lg.		Each
D	6″	6	11⅛″	6923A11	$5.56
D	7″	6	12½″	4040A11	19.77
E	6″	7	12″	2171A11	6.50

F Multiblade Job Saw—Accepts the blades sold below as well as ½″ Universal Shank Reciprocating Blades (see pages 2384-2385). Saw has a soft-grip plastic handle. Includes one 6″ long bimetal reciprocating saw blade for rough cuts in wood and wood with nails. Overall length without blade is 6¾″.

Utility blade cuts ceiling tile, soft wood, soft rubber, and soft plastics; ***scallop blade*** cuts cardboard, foam, insulation, soft vinyl, and rubber; ***linoleum blade*** cuts linoleum, ceiling tile, and vinyl.

		Each
Job Saw	8635A11	$23.28
Utility Blade	8635A54	2.72
Scallop Blade	8635A51	3.54
Linoleum Blade	8635A53	2.90

Poulan Chain Saws

Gas Chain Saw

Whether you pick a gas or an electric model, all of these saws have the following safety features: a front-handle guard; a low-kickback chain; and a chain catcher to reduce the hazards from kickback, derailing, and breaking the chain. Saws also have an automatic chain oiler and are UL listed. All are furnished with a chain brake to stop the chain in the event of kickback.

Gas Chain Saws— For easy starts and smooth operation, these saws have a two-cycle engine with electronic ignition, an all-position carburetor, and an anti-vibration system. A safety grip prevents accidental acceleration and a muffler keeps noise at a minimum without power loss.

Electric Chain Saws— These double-insulated saws have a safety trigger and a motor that operates on 120 VAC, 60 Hz, 13 amps (unless noted). ***PLN3516F*** has a 14″ cord with two-prong plug and a 3.5-hp motor. ***PP400E*** has a 15″ cord with two-prong plug and a 4-hp motor.

Waterjet Cutter Replacement Parts

Keep your waterjet cutter flowing. These orifices and nozzles are compatible with the most common waterjet cutting heads.

Orifices— Choose from orifices for abrasive cutting heads or water-only cutting heads. Larger orifice IDs are for fast cuts and more material removal; smaller orifice IDs are for more accurate cuts.

Carbide Nozzles for Abrasive Cutting Heads— For abrasive cutting heads only. Choose nozzle size based on the ID of your orifice.

About Circular Saw Blades

Choose from a variety of blade styles for specific cutting applications. All blade bodies are steel. Blades have an arbor (hole in the center of the blade) for attaching the blade to your saw. Blades with a ***universal arbor*** have a 5/8″ hole and a diamond-shaped knockout. Blades listed with more than one arbor have a bushing that reduces the size of the arbor, allowing you to choose between sizes to fit different saws.

Toothed Blades

Toothed blades have steel or carbide teeth. Blades with a large number of teeth are for smoother cuts on thinner materials. Fewer teeth are for fast, rough cuts. The ***hook angle*** is the amount of forward or backward tilt of each tooth on a saw blade. Choose a positive hook angle for fast cuts; choose a zero or negative hook angle for controlled, precise cuts, especially in metal.

Steel-Tooth Blades— Blades have steel teeth for occasional use on wood and some metals.

Carbide-Tooth Blades— Have carbide teeth that last longer and cut faster than the teeth on steel-tooth blades. For use on wood, plastic, laminates, and various metals.

Grit-Edge/Diamond Blades

Instead of teeth, grit-edge blades and long-life diamond blades have a continuous, turbo, or segmented rim. ***Continuous rim*** style gives the smoothest finish but should be run at slower speeds. ***Turbo rim*** style is for general purpose applications. ***Segmented rim*** style cuts faster than continuous and turbo rim styles and prevents chips from clogging the blade.

Grit-edge and long-life diamond blades are designed for wet or dry cutting applications. Blades for ***wet cutting*** are best for deep cuts and reduce airborne dust. Blades for ***dry cutting*** resist heat and do not require water cooling. They can also be used for wet-cutting applications.

Fast-Cut Grit-Edge Blades— Carbide grit, diamond grit, or a mix of both is bonded to the edge of the blade. All of the grit is exposed for fast cuts in hard or brittle nonmetals such as tile and plastic.

Long-Life Diamond Blades— Several layers of diamonds on the edge of these blades means that they maintain their cutting edge even after continued use. Use them on concrete, masonry materials, and asphalt.

Steel-Tooth Blades

Choose from a variety of blades for occasional use.

For With- and Cross-Grain Cuts in Wood— Make smooth cuts in wood, either with the grain (ripping) or across the grain (cross-cutting).

For Cross-Grain Cuts in Wood— Perfect for clean cuts across the grain (cross-cutting).

For Plywood/Veneer— For fine, clean cuts. Also for thin plastics.

For Wood Paneling— Blades are designed to prevent clogging and produce smoother cuts in panels.

For Soft Metals/Plastic— Cuts soft metals such as aluminum, copper, and brass as well as plastic.

For Metal— Use for cutting sheet metal, corrugated steel roofing, siding, and studs up to 1/8″ thick. *Note:* Not intended for fully hardened steel.

♠ Recommended for decking materials.

Nonstick Carbide-Tooth Blades for Wood

Don't get stuck in the middle of a cut. Whether you're making cuts with the grain (ripping) or across the grain (cross-cutting), these blades won't get stuck in wood, plywood, veneer, or particleboard. A special coating protects them from heat while reducing buildup and corrosion. Plus, large gaps between the teeth prevent vibration and side movement resulting in straight, clean cuts.

Dia.	Arbor	Teeth	Hook Angle	Width of Cut	Max. rpm		Each
8″	5⁄8″	40	10°	0.126″	9,000	6907A45	$60.38

12″	1″	60	10°	0.126″	6,000	6907A41	95.47
14″	1″	70	10°	0.157″	5,000	6907A25	113.70
16″	1″	80	10°	0.157″	4,000	6907A29	128.55

Carbide-Tooth Blades for With-Grain Cuts in Wood

Also known as rip blades, these blades have large, forward-angled teeth and are best for making fast, long cuts parallel to the grain when working with wood. *Note:* Not recommended for radial arm saws.

Dia.	Arbor	Teeth	Hook Angle	Width of Cut	Max. rpm		Each
6½″	Univ.	18	20°	0.106″	9,800	4124A16	$6.98

16″	1″	36	20°	0.177″	4,000	6908A71	93.96

Carbide-Tooth Blades for Cross-Grain Cuts in Wood

Nonstick

The large number of teeth on these blades shear wood rather than tearing it, making them perfect for across-the-grain cuts (cross-cutting).

Nonstick blades have a heat-resistant coating that prevents corrosion and material buildup. In addition, slots in the blades prevent vibration and side movement resulting in straight, clean cuts.

Dia.	Arbor	Teeth	Hook Angle	Width of Cut	Max. rpm		Each
General Purpose							
7¼″	Univ.	60	10°	0.100″	9,400	6902A11	$58.67

♣ For cuts in laminates and chipboard.

For information about circular saw blades, see page 2393.

Carbide-Tooth Blades for Wood with Nails

The square-shaped teeth on these blades power through reclaimed lumber, flooring with embedded nails, and concrete-coated forming material.

Dia.	Arbor	Teeth	Hook Angle	Width of Cut	Max. rpm		Each
7¼″	Univ.	14	–5°	0.120″	9,400	4217A14	$23.73
12″	1″	24	–15°	0.137″	6,500	4217A21	55.85

Groove-Cutting Carbide-Tooth Blades for Wood

Also known as dado-head blades, these are for cutting grooves with the grain (ripping) and across the grain (cross-cutting) in all types of wood.

Dia.	Arbor	Teeth	Hook Angle	Width of Cut	Max. rpm		Each
6″	⅝″	18	20°	¼″-13⁄16″	10,000	4062A29	$165.22

10″	⅝″	24	20°	¼″-13⁄16″	7,000	4062A32	228.22
12″	1″	36	–12°	¼″-29⁄32″	6,000	4062A53	303.65

Carbide-Tooth Blades for Plastic

Get smooth cuts and chip-free edges on plastic materials including polystyrene, polycarbonate, PVC, and acrylic. When cutting thin and brittle plastics, use a blade with more teeth; when cutting thicker plastics and soft plastics with a low melting point, use a blade with fewer teeth.

Dia.	Arbor	Teeth	Hook Angle	Width of Cut	Max. rpm		Each
7¼″	Univ.	60	10°	0.100″	9,400	6909A12	$73.10
8″	⅝″	60	10°	0.120″	6,900	6909A42★	74.15
10″	⅝″	40	10°	0.120″	6,000	6908A81★	71.48
10″	⅝″	60	12°	0.130″	7,000	6909A15	89.40
10″	⅝″	80	10°	0.120″	6,000	6909A18★	98.58
12″	1″	80	15°	0.136″	6,400	6909A22	143.80
12″	1″	100	10°	0.148″	5,500	6909A23★	164.56
14″	1″	100	18°	0.149″	5,000	6909A26	208.32

★ Also cuts chipboard and plywood.

Curve-Cutting Blades

Arcs and circles are no challenge for these blades. Cut curves with a radius of 15″ and up. ***Blade for wood*** has carbide teeth and is coated for reduced friction. ***Blade for masonry*** is a long-life diamond blade and is turbo rim style. ***Compass guide*** is made of aluminum and attaches to circular saws for cutting 30″ to 54″ circles and arches.

Side View

Blade for Wood

Dia.	Arbor	Teeth	Hook Angle	Width of Cut	Max. rpm		Each

Fast-Cut Carbide/Diamond-Grit-Edge Blades for Nonmetals

A blend of tungsten carbide grit and diamond grit on the edge of these blades makes them last longer than carbide-grit-edge blades. They are ideal for cutting reinforced plastic, fiberglass, ceramic, composites, graphite, and other hard nonmetallic material. All are continuous rim style.

Dia.	Arbor	Width of Cut	Max. rpm		Each
2″	¼″	0.085″	23,000	40225A1	$49.23

10″	1″	0.130″	9,000	40225A21	173.18

Fast-Cut Diamond-Grit-Edge Blades for Nonmetals

Diamond grit provides multiple cutting points on the edge of these blades so they'll last longer than carbide/diamond-grit-edge blades. Use them for dry cuts in brittle nonmetals such as graphite, ceramic, quartz, fiberglass, carbon, and phenolics. All are segmented rim style.

Dia.	Arbor	Width of Cut	Max. rpm		Each
4″	½″	3⁄32″	11,460	4102A31	$95.00

Circular Saw Blade Stiffeners

Mount these 4″ dia. steel stiffeners on stationary saws with blades that are 10″ dia. or larger. They have a ⅝″ arbor and are ⅛″ thick.

41035A11 ..... **Per Pair** $19.11

For information about circular saw blades, see page 2393.

General Purpose Long-Life Diamond Blades

Turbo Rim

Segmented Rim

Designed for wet and dry cutting, these blades are for use on hard, brittle materials such as concrete, masonry, and stone. Diamond depth for all blades is 0.4″.

Economy blades are for general purpose applications.
Premium blades are more durable than economy blades.

Turbo-rim style cuts the widest range of materials including reinforced concrete, granite, and paver bricks. *Segmented-rim* style makes fast cuts in softer materials such as concrete, brick, and asphalt.

Long-Life Diamond Blades for Cured Concrete

For use on poured concrete that has set for more than 48 hours. Blades are segmented rim style. Drive pinhole is 7/16″ dia.
Economy blades are for occasional use. Diamond depth is 0.22″.
Standard blades are more durable than economy blades. Diamond depth is 0.25″.
Premium blades are for frequent use on large cutting jobs. They have a higher concentration of diamonds and more cutting points for faster cutting than standard blades. Diamond depth is 0.25″.
Use *wet-cutting* blades on walk-behind flat saws. Use *dry-cutting* blades on hand-held high-speed saws and low horsepower (under 20 hp) walk-behind flat saws.

For information about circular saw blades, see page 2393.

Metal-Cutting Blades for Cold Saws

Designed to run at slow speeds on cold saws, these blades make clean, efficient cuts in hard metals such as stainless steel and cast iron. They are made of steel and are steam-oxide treated to a Rockwell Hardness between C63 and C65 for increased wear resistance. Blades normally run at 15-65 rpm. Maximum blade speed is 200 sfpm. Hook angle is 18°.

Blades for a 32 mm arbor have two 8.5 mm drive pinholes with a center-to-center distance of 45 mm, two 9 mm drive pinholes with a center-to-center distance of 50 mm, and two 12 mm drive pinholes with a center-to-center distance of 64 mm. ***Blades for a 40 mm arbor*** have two 9 mm drive pinholes with a center-to-center distance of 55 mm as well as four 12 mm drive pinholes with a center-to-center distance of 64 mm.

Universal Portable Miter Saw Stand

Great for carrying between job sites, this galvanized steel stand has universal mounting clamps that support all brands of miter saws. Arms adjust from 46″ to 114″ for longer pieces and have a flip-up stop on each end for making repetitive cuts. Overall size is 36″ Ht.×114″ Wd.×27 1/2″ Dp.; legs fold up and lock into stand for a compact carrying size of 9″ Ht.×46″ Wd.×6″ Dp. Weighs 43 lbs.

4136A11 ..... **Each** $230.91

Laser Cutting Guides for Miter and Chop Saws

Make sure your saw blade is aligned before you make the cut. These guides sit flush against the blade and project a laser guideline just to the left of the cut. They automatically turn on/off when the blade moves or stops.

Laser cutting guide for miter saws fits most 8 1/4″, 8 1/2″, 10″, and 12″ miter saws, with the exception of Bosch, Rigid, and Protech. Furnished with bolts, hex L-keys, batteries, and a carrying case.

Laser cutting guide for chop saws can be used on most chop saws. Includes batteries and an arbor adapter.

Laser Cutting Guide for Miter Saws	**4517A61**	**Each**	$35.04
Laser Cutting Guide for Chop Saws	**4517A71**	**Each**	$26.70
Replacement 1.5-Volt Battery	**7604K57**	**Each**	$2.03

Vertical Panel Saws

Cut across the grain (cross-cutting) and with the grain (ripping) on panels up to 1 3/4″ thick with a cutting accuracy of 1/32″. Great for cutting wood, laminates, crating materials, vinyl sheeting, and aluminum plate.

Saws use 8″ dia. blades with a 5/8″ arbor (sold separately on pages 2393-2395). Motor is 3 1/4 hp and operates at 120 VAC, 15 amps. No-load speed is 5,800 rpm. Saws include an 18-ft. cord with two-prong plug.

50″ saw has a 5-ft. steel frame and a folding stand with wheels.

64″ saw has a 10-ft. steel frame and a fixed stand with wheels.

Quick-stop gauging systems are designed for repetitive cuts of the same measurement.

40″ length extension adds 20″ length to each side of the saw frame for cutting larger panels.

Saws

Pistol-Grip Panel Saw

Saw

Ideal for cuts in large sheets of material that are too big for regular panel saws or table saws. Maximum cutting depth is 3/8″. Saw uses 1 3/4″ and 2″ dia. blades and includes four blades (one each of 4000A25, A26, A14, and A27 listed below). Has a 5-amp, variable-speed, 0-2,500 rpm motor that operates on 120 VAC, 50 Hz, single phase. Includes an 8-ft. cord with two-prong plug. Weighs 7 lbs.

4000A4 ..... **Each** $451.50

Replacement Blades

Blades are 1/32″ thick and cut a slot that's approximately 0.045″ wide. They're made of high-speed steel with a black-oxide finish. *Note:* Use stick wax lubricant or cutting fluid to improve performance (sold separately on pages 2179-2180).

Recommended Use	Blade Dia.	Arbor Size	Teeth	Max. Cut. Dp.		Each
Aluminum, brass, plywood, plastics, fiberglass	1 3/4″	7/16″	30	5/16″	**4000A25**	$4.72

16-24 gauge mild steel, fiberglass	2″	7/16″	80	3/8″	**4000A28**	5.57

Portable Wet-Cutting Tile Saw

Designed for wet cutting tile and marble, this saw handles straight cuts up to 18″ and diagonal cuts up to 13″. It has an adjustable guide bar for precise cuts. Includes a water reservoir, pump, blade guard, diamond blade, and an 8′4″ cord with three-prong plug. Saw has a 1 1/4-hp motor and operates on 120 VAC, 60 Hz. CSA certified.

7″	5/8″	2″	6,000	33	**6446A21**	$330.99
Replacement Diamond Blade					**6446A31**	44.00

About Cutoff Wheels

Cutoff wheels cut through harder materials than carbide-toothed circular saw blades and are great for cuts in metal. They are made with abrasive grit and are typically reinforced by one or more layers of fiberglass for added stability and strength. ***Type 1*** wheels are flat with a flat center. ***Type 27*** wheels are flat with a depressed center.

Depending on size and type, cutoff wheels can be used on a variety of tools such as portable and stationary chop/cutoff saws, small-wheel grinders, right-angle grinders, and circular saws.

Note: Do not use for grinding. Be sure the operating speed of the saw does not exceed the speed marked on the cutoff wheel, its instruction sheet, or its packaging. Always wear safety glasses. For additional safety information, see ANSI Safety Guide B7.1.

Cutoff Wheels

Cut iron, steel, stainless steel, and other ferrous metals. These cutoff wheels are made with aluminum oxide abrasive and are double reinforced. All are Type 1 cutoff wheels.

36 Grit— For fast cuts.
46 Grit— For cuts with minimal burrs.
60 Grit— For smooth, burr-free cuts.

Long-Life Cutoff Wheels

Get three times the life of standard cutoff wheels. These incredibly durable wheels are double reinforced and cut iron, stainless steel, high-alloy steel, and other ferrous metals. All are Type 1 cutoff wheels.

36 Grit— For fast cuts.
60 Grit— For smooth, burr-free cuts.
Ceramic aluminum oxide wheels combine high performance with fast cutting action for an even longer wheel life than long-life aluminum oxide cutoff wheels.

For information about cutoff wheels, see page 2399.

High-Performance Cutoff Wheels

Made with a combination of two abrasives (ceramic aluminum oxide and zirconia aluminum), these wheels give you the best performance for the toughest applications.

They are reinforced and last up to five times longer than aluminum oxide wheels on hard metals including Inconel, Hastelloy, and hardened tool steel. All are Type 1 cutoff wheels.

Smooth-Cutting Cutoff Wheels

The extra-fine, internal reinforcement on these aluminum oxide wheels allows for a smooth finish when cutting steel. All are Type 1 cutoff wheels.

***46 Grit*—**For steel bar and bolts.

***60 Grit*—**For aircraft and tool steel.

Cutoff Wheels for Metallurgical Testing

These non-reinforced wheels provide a nearly polished finish and are ideal for preparing metal for testing (metallurgy). All are Type 1 cutoff wheels and are made with silicon carbide abrasive, unless noted. *Note:* Use on metallurgical testing machines only. Securely clamp material to the machine.

✓ RH = Rockwell Hardness ★ Made with aluminum oxide abrasive.

Diamond Cutoff Wheels for Carbide, Glass, and Ceramics

A diamond edge means these reinforced steel cutoff wheels last longer than other wheels during cuts in hard, nonferrous materials such as carbide, ceramics, and glass. All are Type 1 cutoff wheels.

Note: Not for steel and other ferrous metals.

Dia.	Thick.	Arbor	Grit	Max. rpm		Each

Cutoff Wheels for Right-Angle Grinders

The added fiberglass reinforcement on these cutoff wheels allows them to be used on right-angle grinders for cutoff applications. All are Type 1 cutoff wheels.

***General Purpose Metal Cutting*—**Made with aluminum oxide abrasive for cuts in a wide variety of metals including steel and stainless steel.

***Stainless Steel Cutting*—**Made with zirconia alumina abrasive (unless noted) for fast cuts in stainless steel and other alloys.

***Aluminum Cutting*—**Made with aluminum oxide abrasive and designed for cuts in aluminum and other soft metals.

***Masonry/Concrete Cutting*—**Made with silicon carbide abrasive for cuts in masonry and concrete.

● Made with ceramic aluminum oxide abrasive.

For information about cutoff wheels, see page 2399.

Flush-Cutting Cutoff Wheels for Right-Angle Grinders

Also known as Type 27, raised hub, and depressed-center cutoff wheels, these wheels have a center that is higher than the cutting edge, making flush cutting easier than when using flat cutoff wheels on right-angle grinders. All are made with aluminum oxide abrasive (unless noted).

General Purpose Metal Cutting—Use for cutting ferrous metals such as steel and stainless steel (unless noted).

Stainless Steel Cutting—Use for cutting stainless steel, high-tensile alloys, and other hard metals.

Aluminum and Nonferrous Metal Cutting—Have a soft bond for aggressive cutting and resistance to loading. Use for cutting aluminum, brass, copper, and other soft nonferrous metals.

♦ Also for soft nonferrous metals such as aluminum and brass. ● Made with ceramic aluminum oxide abrasive.

Cutoff Wheels for Portable Circular Saws

Cut metal and concrete with your portable circular saw by attaching one of these wheels. These cutoff wheels have arbors that fit most portable circular saws and are reinforced. All are Type 1 cutoff wheels. Wheels with a universal arbor have a knockout that fits 5/8″ round and 13/16″ diamond arbors (unless noted).

General Purpose Metal Cutting—Made with aluminum oxide abrasive for fast cuts in ferrous metals such as steel and cast iron. All are 3/32″ thick (unless noted) and 36 grit.

Stainless Steel Cutting—Made with aluminum oxide abrasive for fast cuts in stainless steel. Wheels are 1/16″ thick and 46 grit.

Sheet Metal Cutting—Made with aluminum oxide abrasive. Excellent for use on worm-drive saws to cut sheet metal, roof decking, and metal siding. Wheels are 1/8″ thick and 30 grit.

Concrete and Masonry Cutting—Made with silicon carbide abrasive for cutting concrete, brick, stone, fire brick, and other masonry materials. All are 1/8″ thick and 30 grit.

♣ 1/8″ thick. ♥ Has a 5/8″ round arbor hole; no 13/16″ diamond knockout.

Cutoff Wheels for Portable Gas/Electric Cutoff Saws

Sized to fit portable gas and electric cutoff saws, these wheels have large diameters and various arbor sizes. All are reinforced Type 1 cutoff wheels.

General Purpose Metal Cutting—Made with aluminum oxide abrasive for cutting mild steel and stainless steel, including rebar, pipe, and structural shapes. All are 1/8″ thick (unless noted) and 24-30 grit.

Ductile Iron Cutting—Made with aluminum oxide and silicon carbide abrasive for ductile and cast iron applications. All are 1/8″ thick (unless noted) and 24 grit.

Sheet Metal Cutting—Made with aluminum oxide abrasive, these wheels are best for cutting sheet metal, roof decking, and siding. All are 5/32″ thick and 24 grit.

Concrete and Masonry Cutting—Made with silicon carbide abrasive for cutting concrete, brick, clay pipe, and other masonry products. All are 1/8″ thick (unless noted) and 30 grit.

I-Beam/Rail Cutting—Made with aluminum oxide abrasive for cutting metal I-beams, rails, and bar stock. Wheels are 1/8″ thick and 24 grit.

♠ 5/32″ thick. ▲ Max. rpm is 4,800.

For information about cutoff wheels, see page 2399.

Cutoff Wheels for Benchtop Chop/Cutoff and Stationary Saws

Choose from wheels in a variety of styles and diameters for use on benchtop chop/cutoff saws and stationary saws. All are 24-36 grit, Type 1, reinforced, and made of aluminum oxide (unless otherwise indicated). *Note:* Do not use with hand-held saws.

Cutoff Wheels for Chop/Cutoff Saws

General Purpose Metal Cutting—For burr-free cuts in small cross-sections of steel.
Fast Metal Cutting—For fast, burr-free cuts in steel, stainless steel, and aluminum.
Metal Drywall Studs/Thin Metal Cutting—Last longer than general purpose wheels for cuts in metal drywall studs and other thin metals.
Aluminum Cutting—For aluminum and other soft metals.
Stainless Steel Cutting—For stainless steel, high-tensile alloys, and ferrous metals. Wheels are made of a patented ceramic aluminum oxide that combines high performance with fast cutting action for an extremely long blade life.

For information about cutoff wheels, see page 2399.

Miniature Cutoff Wheels for Dremel-Type Tools

They may be small, but these cutoff wheels will cut through hard materials when used on Dremel-type tools. All wheels have a fine grain abrasive grit.

Aluminum Oxide Wheels—Designed for general purpose cutting in anything from metal to plastic. All are 90 grit, except 1257A85, which is 46 grit.

Silicon Carbide Wheels—Use to cut plastic, stone, ceramics, wood, and soft metals such as aluminum and brass. All are 80 grit.

Ceramic Aluminum Oxide Wheels—Superior for cuts in stainless steel, titanium, and other high-tensile alloys. All are 80 grit.

Miniature Blades for Dremel-Type Tools

A

B

C

Style A—Made of hardened steel with ground sides for low clearance, these blades have teeth that make clean, precise cuts.

Style B—Blades are steel with a tungsten carbide grit edge.

Style C—Several layers of diamonds means these stay sharp after continued use. 1257A92 and A91 are diamond from the arbor hole to the edge of the blade. 1257A89 is steel with diamond on the outer 1/8″ of the blade.

♠ Soft metals include aluminum, brass, and copper.
♦ Furnished with a 1/8″ shank mandrel.

High Performance Miniature Blades for Dremel-Type Tools

The diamond grit edge on these blades means they produce smoother, cleaner cuts and last longer than standard miniature blades for Dremel-type tools. You'll get a quality finish on a variety of materials, especially those used for dental applications.

All blades are steel with a synthetic diamond grit edge that lasts longer than a natural diamond grit edge. Choose thinner blades for less material removal and thicker blades for faster cuts.

♣ Made of stainless steel. ▲ Includes screws from 4568A15 and A17, plus a body that holds either screw.

Mandrel Set—Includes two Style H mandrels. Arbor hole size: 1/16″. Max. wheel thickness: 3/16″. Shank dia.: 1/8″. Head dia.: 3/16″. Overall length: 1 1/2″. One mandrel also comes with two 5/16″ dia. washers.

1257A81 ..... **Per Set** $4.54

Hole Saw Size Selection Guide for Pipe, Copper Tubing, and Conduit

Use the table below to determine the correct hole saw size you need when working with pipe, copper pipe and tubing, and conduit. For additional hole saw sizes for other applications, see the hole saw presentations on this page and the next page.

Please refer to the table below for the following examples:

***Pipe*—**Example: Use a 7/8″ diameter hole saw to cut holes for 1/2″ pipe. For more information about pipe size, see pages 2-3.

***Copper Pipe and Tubing*—**Example: Use a 7/8″ diameter hole saw to cut holes for 5/8″ copper pipe and tubing.

***Conduit*—**Example: Use a 7/8″ diameter hole saw to cut holes for 1/2″ conduit.

***Pipe Taps*—**Taps are used to form pipe threads in the cut hole. Example: Use a 7/8″ diameter hole saw to cut holes that you will thread with a 3/4″ pipe tap for 1/2″ pipe.

Hole Saws

Bimetal
1 1/2″ Cut Depth

Carbide Tipped
1 1/2″ Cut Depth

Carbide Grit
1 1/8″ Cut Depth

Diamond Grit
1 1/2″ Cut Depth

Note: To select the correct arbor size, find the arbors that are compatible with your hole saw diameter. From those arbors, choose one with a shank size that fits in your drill chuck. For example, if your hole saw is 1″ dia. and your drill chuck accepts hex shanks 1/4″ dia. and smaller, choose 4066A76. When using 3″ dia. and larger deep-cutting hole saws, use a driving plate for extra reinforcement (sold separately, see 4066A96 on page 2405).

Bimetal and ***Deep-Cutting Bimetal Hole Saws*—**Have high-speed steel teeth welded to a steel body. Use for cutting wood, plastic, nonferrous metals such as aluminum, brass, and bronze, and ferrous metals such as steel, stainless steel, and cast iron.

***Heavy Duty Bimetal Hole Saws*—**Superior for cutting in all metal and wood applications. Blades have high-speed steel teeth welded to a flexible steel body. Teeth are angled forward for faster cutting.

Carbide-Tipped and ***Deep-Cutting Carbide-Tipped Hole Saws*—**Hard carbide teeth are welded to a steel body for cutting tough, abrasive materials that would ruin bimetal hole saws. They're a good choice for cutting fiberglass, plasterboard, fiberboard, plastic laminate, masonite, tile, and nonferrous metals such as aluminum, brass, and bronze.

***Carbide-Grit Hole Saws*—**A carbide-grit edge is bonded to a steel body for easy cutting of ceramic tile, fiberglass, slate, plastic laminate, cast iron, marble, glass, and composites (unless noted).

***Diamond-Grit Hole Saws*—**Have a diamond-grit edge bonded to a steel body that cuts more accurately, leaves a smoother finish, and lasts longer than carbide-grit saws. Use them for cutting reinforced plastics, Kevlar, stone, brick, and other abrasive materials with a high silicon content. *Note:* To cut ceramic tile, you must use a 1/4″ carbide-tipped pilot drill (see 4066A141 on page 2405).

Hole Saw Arbors

Attach your hole saw to your drill or drill press with one of these arbors. They are for use with the hole saws sold separately on this page and on the previous page. All arbors are designed so you can change saws without removing the arbor from the chuck. One arbor can be used with a range of hole saw diameters.

Note: To select the correct arbor size, find the arbors that are compatible with your hole saw diameter. From those arbors, choose one with a shank size that fits in your drill chuck or drill press. For example, if your hole saw is 1″ dia. and your drill chuck accepts hex shanks ¼″ dia. and smaller, choose 4066A76.

Arbor Shank Size	Arbor Thread Size	Pilot Drill Lg.	Arbor with Pilot Drill	Each	Replacement Pilot Drill	Each
Fits 9/16″-1 3/16″ Hole Saw Dia.						
¼″ Hex	½″-20	3 1/16″	4066A76	$4.62	4066A86	$2.43
⅜″ Hex	½″-20	3 1/16″	4066A78	6.85	4066A86	2.43
7/16″ Hex	½″-20	4 5/16″	4066A62	6.39	4066A89	2.53
Fits 1¼″-6″ Hole Saw Dia.						
⅜″ Hex	⅝″-18	3 1/16″	4066A79	10.01	4066A86	2.43
7/16″ Hex	⅝″-18	3 1/16″	4066A63	10.05	4066A86	2.43
⅝″ Hex	⅝″-18	4 5/16″	4066A68	10.05	4066A89	2.53

7/16″ Hex Arbor— Fits 9/16″-1 3/16″ Dia. Hole Saws

7/16″ Hex Arbor— Fits 1¼″-6″ Dia. Hole Saws

Hole Saw Arbor Kit

Includes one ¼″ round shank arbor with ½″-20 threads for 9/16″-1 3/16″ dia. saws; one 7/16″ hex shank arbor with ½″-20 threads for 9/16″-6″ dia. saws (has a retainer nut that also allows it to be used on 1¼″-6″ dia. saws with ⅝″-18 threads); two ¼″ pilot drills; and two adapter nuts for the ¼″ round and 7/16″ hex arbors.

4130A14 ..... **Each** $18.52

Accessories for Hole Saws and Hole Saw Arbors

Driving Plate—Use to reinforce 3″-4⅛″ dia. hole saws for heavier feed and drive pressures.

4066A96 ..... **Each** $14.31

12″ Extension—Use with 7/16″ hex shank arbors to increase the reach of the hole saw.

4066A64 ..... **Each** $8.03

Arbor Adapter—Lets you use arbors 4066A76, A78, and A62 with 1¼″-6″ dia. hole saws.

4066A77 ..... **Each** $3.13

¼″ Carbide-Tipped Pilot Drill—Great for cutting hard materials, this pilot drill fits all arbors above except 4066A62 and A68. Drill is 2⅞″ long.

4066A141 ..... **Each** $8.56

Quick-Change Hole Saw Arbors

Switch hole saws without using extra adapters or special tools. These arbors have a spring-loaded quick-release collar that pulls back to let you quickly unthread the hole saw from the arbor instead of using a wrench or loosening set screws, unless noted.

These arbors are designed to work with all brands of hole saws. 4043A11 and A13 include one 4″ long pilot drill. 4043A12 includes one 3″ long pilot drill. Body is made of steel.

For Hole Saw Dia.	Hex Shank Dia.		Each
9/16″-1 3/16″	⅜″	4043A11●	$21.66
1¼″-3″	⅜″	4043A12	22.54
1¼″-6″	7/16″	4043A13	22.54
Repl. Pilot Drill, ¼″ Dia. × 3″ Lg.		4043A22	3.47
Repl. Pilot Drill, ¼″ Dia. × 4″ Lg.		4043A21	3.47

● Collar is not spring loaded.

Hole Saw Pilot for Enlarging Holes

Enlarge too-small holes in one cut by using the existing smaller hole as a guide for creating a perfectly centered, larger hole. Fits all brands of threaded hole saws.

To use, replace your arbor's pilot drill with this pilot. Attach the larger diameter hole saw (in size desired) to your arbor. Then, thread the smaller hole saw that matches the size of the existing hole onto the end of the pilot with teeth facing up. The smaller hole saw now acts as a pilot for the existing hole rather than a cutting tool. Insert arbor into chuck and slowly drill the larger hole.

Adapter Nut—Required for 1⅛″ dia. and larger hole saws. Adapts ½″-20 arbor threads to ⅝″-18 arbor threads.

		Each
Size Adapter	4158A11	$20.17
Adapter Nut	4158A12	4.48

For information about hole saw size selection, see page 2404.

Hole Saw Kits

Kits include a 1/4″ pilot drill with each arbor and come in a plastic case, except 4005A31, which comes in a metal case.

	No. of Saws	Saw Cut Depth	Contents: Hole Saws, Arbors, and Accessories		Each

Carbide Grit	9	1 1/2″	**Hole Saws:** 3/4″, 7/8″, 1 1/8″, 1 3/8″, 1 1/2″, 1 3/4″, 2″, 2 1/4″, and 2 1/2″; **Arbors:** one 1/4″ round shank for 9/16″-1 3/16″ dia. saws, one 7/16″ hex shank for 9/16″-1 3/16″ dia. saws, one 7/16″ hex shank for 1 1/4″-6″ dia. saws; **Accessories:** one 12″ arbor extension	4194A63	$175.23

Bimetal Hole Saws with Built-In Arbor

Hole Saw

Pilot Drill

No need to find an arbor for these hole saws—the saw and the arbor are one piece. Use them to cut wood with nails, plywood, plastic, and ferrous and nonferrous metals including steel, stainless steel, aluminum, and copper. Saws have a high-speed steel cutting edge that's welded to a steel backing. Cutting depth is 1 1/2″; arbor shank size is 7/16″ hex.

Hole Saws—All require a pilot drill (sold separately below.)

Hole Saw Kits—Cutting depth is 1 1/2″.

5-Saw Kit—Includes 7/8″, 1″, 1 1/8″, 1 1/4″, and 1 1/2″ hole saws; one 1/4″ × 4 5/16″ pilot drill; and a plastic carrying case.

4008A72 ..... **Each** $45.31

9-Saw Kit—Includes 3/4″, 7/8″, 1 1/8″, 1 3/8″, 1 1/2″, 1 3/4″, 2″, 2 1/4″, and 2 1/2″ hole saws; four 1/4″ × 4 5/16″ pilot drills; a screwdriver; 12″ arbor extension; and plastic carrying case.

4008A71 ..... **Each** $105.05

Pilot Drill

For use with hole saws sold above. Drill is 1/4″ dia., 4 5/16″ long, and made of high-speed steel.

4066A89 ..... **Each** $2.53

Hole Saw Pipe and Tube Notcher

Cut notches in pipe and tubing using this fixture with your hole saw. You'll have a perfect fit when you need to weld intersecting pipe. A built-in laser-engraved protractor lets you cut angles from 30° to 90° in 1° increments. A sturdy V-block clamping system holds pipe or tube with an OD up to 2″. Notcher mounts easily to a workbench, stand, or truck bed.

You'll need a portable variable-speed 1/2″ drill to drive the hole saw unless you mount the notcher on a drill press. If mounting notcher onto a drill press, a mounting base (sold separately below) must be used. Choose a hole saw (sold separately on pages 2404-2405) that has the same diameter as the OD of the pipe or tubing to which you are attaching the notched pipe or tubing. Furnished with a 1/2″-20 arbor for use with 9/16″-2″ dia. hole saws and a 5/8″-18 adapter for use with 1 1/4″-2″ dia. hole saws.

		Each
Notcher	4104A22	$186.34
Replacement 5/8″-18 Adapter	4104A25	7.68

		Each
Optional Mounting Base	4104A23	$42.09
Optional Arbor with 5/8″-18 Thread	4104A24	19.02

For information about hole saw size selection, see page 2404.

Heavy Duty Carbide-Tooth Hole Saws

The carbide teeth on these saws outperform and last longer than the teeth on carbide-tipped and bimetal saws. Plus, they can be sharpened as needed.

Note: Hole saws, arbors, and pilot drills are sold separately below. Arbors and pilot drills work only with the hole saws below. To select the correct arbor size, find the arbors that are compatible with your hole saw diameter. For example, if your hole saw is 1″ dia., choose arbor 4118A57.

Metal-cutting saws have a 1″ cutting depth. Use them to cut steel, cast iron, stainless steel, titanium, aluminum, and hard rubber.

Pipe/duct-cutting saws have a 2″ cutting depth. Use them to cut cast and ductile iron pipe as well as other metal structural shapes.

TiN- and TiAlN-Coated High-Speed Steel Hole Saws for Sheet Metal

Coated to last longer and run at higher speeds than uncoated hole saws for sheet metal. These hole saws and arbors (sold separately) are high-speed steel. Cutting depth is 1/4″. Arbors have a hex shank and come with a 2 5/32″ long pilot drill, except for 4146A93, which has a 2″ pilot drill.

TiN (Titanium Nitride)—Color is gold.

TiAlN (Titanium Aluminum Nitride)—For very high speeds and high-temperature applications. Color is purple-blue.

Adjustable Diameter Hole Cutters for Sheet Metal

Adjust the hole diameter to cut a variety of hole sizes with just one tool. Use these cutters in a drill press to cut holes in sheet metal, mild steel, laminates, plastic, and wood. Maximum safe speed is 500 rpm. Maximum cutting depth is 7/8″. Include a single high-speed steel cutting bit and a 1/4″ pilot drill.

Dia. Range	Shank Size	Bit Size	Hole Cutters	Each	Repl. Cutting Bits	Each

Recessed Lighting Hole Saws

Specially sized with a carbide grit cutting edge, these saws are just right for cutting holes for recessed lighting fixtures. Use to cut materials such as drywall, lath, plaster, and ceiling tiles. An arbor is required for operation (sold separately below).

Dust catcher fits between the drill chuck and the hole saw and catches dust and debris when sawing into ceilings. Use with hole saws up to 8″ dia. Made of flexible plastic.

Hole Saw

Dust Catcher

Dia.	Fits Lighting Fixtures		Each
4 3/8″	Capri, Halo, Marco, Mini Juno	4478A11	$60.99

7/16″ Arbor ..... **4066A63** **Each** $10.05

Dust Catcher ..... **4478A21** **Each** $14.85

Hole Saw Core and Slug Removing Tool

Quickly and easily remove cores and slugs from your hole saw. The tool has two reverse-angled hooks that fit through the cleanout slots in your hole saw and allow you to quickly pull out cores and slugs. Made of black-oxide coated steel. Works with 1/2″-2 1/2″ dia. hole saws.

4067A21 ..... **Each** $6.31

For information about hole saw size selection, see page 2404.

High-Speed Steel Hole Saws for Sheet Metal

Large-Diameter Hole Saw

Deep-Cutting Hole Saw

Arbor with Spring-Loaded Pilot Pin

Arbor with Pilot Drill

Designed for fast, smooth cuts in sheet metal, these hole saws are made from heat-treated high-speed steel. Use them in portable drills and drill presses.

Large Diameter—Use to cut large diameter holes in sheet metal.

Deep Cutting—These have large flutes that prevent chips from clogging the saw, allowing you to cut deeper holes. *Note:* For hole saws with greater cutting depths than shown here, see page 2404.

Arbors—*Arbors with pilot pin* require a drilled pilot hole before using. *Arbors with spring-loaded pilot pin* allow easier removal of the core/slug. Drill pilot hole before using. *Arbors with pilot drill* allow you to drill a center pilot hole while sawing.

Kits—Include a high-speed steel pilot drill with each arbor and are furnished in a plastic carrying case.

Arbors for Deep-Cutting Hole Saws

3/8″ Shank Arbor with Pilot Pin—For 5/16″-13/16″ dia. saws. Has set screws that hold arbor and pin together.
Arbor ..... 4093A76 **Each** $43.38

3/8″ Shank Arbor with Spring-Loaded Pilot Pin—For 1/4″-3/4″ (6 mm-20 mm) dia. saws.
Arbor ..... 4093A71 **Each** $15.67
Replacement Pilot Pins (3/Pkg.) ..... 4093A75 **Per Pkg.** $5.78

1/2″ Shank Arbor with Spring-Loaded Pilot Pin—For 13/16″-1 1/2″ dia. saws. Has set screws that hold arbor and pin together.
Arbor ..... 4093A73 **Each** $49.74
Replacement Pilot Pin ..... 4093A74 **Each** $5.73

3/8″ Shank Arbor with Pilot Drill—For 3/8″-3/4″ dia. saws.
Arbor ..... 4093A72 **Each** $21.28
Replacement 3/16″ Pilot Drill (3/Pkg.) ..... 4093A84 **Per Pkg.** $14.56

Adjustable Large Diameter Hole Cutters for Sheet Metal

Drill Not Included

Attach these cutters to your portable drill and cut large-diameter holes in sheet metal up to 20 gauge (0.040″ thick). The 3/16″ dia. cutting bit fits 1/4″ and larger drill chucks. Cutter rotates on a 1/4″ pilot pin inserted into a drilled hole to produce clean, symmetrical holes. Shank is mounted to a cast aluminum frame.

Dia. Range		Each
2″-12″	30885A12	$65.24
2″-20″	30885A14	83.06
Replacement Cutting Bit	30885A18	14.11

Spot Weld Hole Saw

Designed to remove spot welds from sheet metal, this 3/8″ dia. high-speed steel saw is faster and more precise than drills and other hole saws. Has 1/4″ hex shank.
4096A11 ..... **Each** $16.96

Extra-Large Diameter Hole Saws

Cut holes up to twice the diameter of other bimetal hole saws. Saws are made with a titanium-aluminum body and have three replaceable bimetal blades that allow for easy chip removal. Replacement blades sold separately.

Use for cuts in plywood, laminates, sheetrock, acrylic, fiberglass, and metal siding. Cutting depth is 3/4″. Use with a portable drill or drill press that has a 1/2″ or larger chuck. Require a 1/2″ arbor with pilot drill (sold separately below).

Air-Powered Drills

You'll get all the benefits of an electric drill in environments where electricity is not an option. These drills operate on 90 psi air pressure and have a ¼″ NPT female air inlet. All come with a chuck and a key, except Style B, which has a keyless chuck, and Style P, which have a threaded spindle.

Light Duty Drills— Designed for intermittent use. *Style A* has a rubber hand grip for added comfort. *Style D* has a side handle that adjusts 360°. *Styles E, F,* and *G* have a lever throttle with a lock to prevent accidental starts.

Medium Duty Drills— More durable than our light duty drills, these drills are excellent for general purpose drilling jobs. *Style H* have a rubber hand grip to reduce vibration. *Style J* has a side handle that adjusts 360° and a rubber hand grip for added comfort.

Heavy Duty Drills— Rated for continuous use, these tools take on your tough drilling jobs. They have heavy duty bearings and hardened steel gears. *Style H* has a rubber hand grip to reduce vibration. *Styles L* and *N* have a speed control that lets you set the motor speed at less than the max. rpm. *Style N* has an exhaust deflector/silencer that adjusts 360°.

Heavy Duty Drills for Threaded-Shank Drill Bits— Also rated for continuous use, these drills have a threaded spindle instead of a drill chuck and use ¼″-28 threaded-shank drill bits (sold separately, see page 2457). They have heavy duty bearings and hardened-steel gears.

Multi-Angle Drill Attachment

Drill here, drill there...this attachment lets you drill anywhere. It fits onto your drill and rotates a full 360°, making it ideal for use in recessed locations.

Attachment has a round body with a 3/8″ keyless chuck and a 3/8″ hex shaft that rotate independently from each other. Simply slide the thumb switch and twist the soft-grip handle to lock and unlock the moving parts. For use with drills that have a 3/8″ and larger chuck capacity.

2496A11 ..... **Each** $34.71

DeWalt Cordless Drill/Drivers

Get drilling power where you need it. These cordless drills have a variable-speed reversing motor, an adjustable clutch, a keyless chuck, and a cushion-grip handle (except Style C, which does not have a clutch or a cushion-grip handle). All drills are furnished with two batteries; a 1-hr., 120 VAC battery charger; and a carrying case. All are UL listed and meet OSHA requirements.

29835A88 has a 360° rotating side handle.

Batteries and Chargers for DeWalt Cordless Tools

Switch out your DeWalt nickel cadmium battery for a lighter DeWalt lithium ion battery—DeWalt's nickel cadmium and lithium ion batteries can be used interchangeably in DeWalt tools. Batteries and chargers are not interchangeable with other brands and are not for use with DeWalt Univolt tools.

Nickel cadmium batteries are compatible with all DeWalt chargers for nickel cadmium and lithium ion batteries.

Lithium ion batteries are lighter than nickel cadmium batteries. They are compatible with all DeWalt chargers except those that are for nickel cadmium batteries only (chargers for nickel cadmium batteries only are black in color).

29835A123 ***charger*** is for use in vehicles.

DeWalt 18-Volt Cordless Tool Combination Kits

Get the tools you need in an easy-to-carry two- or four-tool combination kit. Both kits come with two 18-volt, 2.4 amp-hour, nickel-cadmium batteries, and a 1-hr., 120 VAC charger.

Two-Tool Kit— Includes a hammer drill with 1/2″ chuck capacity, a reciprocating saw (0-3000 strokes per minute) with one 1/2″ universal-shank reciprocating saw blade, and a carrying bag.

Four-Tool Kit— Includes a hammer drill with 1/2″ chuck capacity, a reciprocating saw (0-3000 strokes per minute) with one 1/2″ universal-shank reciprocating saw blade, a 6 1/2″ circular saw (5/8″ arbor) with one carbide-tipped circular-saw blade, a flexible-stem flashlight, and a carrying case.

Four-Tool Kit

		Each
Two-Tool Kit (Model No. DCK251X)	8862A43	$377.65
Four-Tool Kit (Model No. DCK450X)	8862A44	507.06

Hand Drills

Good for use on wood that is prone to splintering.

D Crank-Action Hand Drill— Just turn the smooth-running hand crank to drill.

E Spiral-Action Ratchet Hand Drill/Screwdriver— An up and down stroke turns this drill to quickly drive and remove screws. Set the drill to turn clockwise, counterclockwise, or lock in place for increased power.

F Ratchet-Bit Brace Hand Drill— Great for use in confined areas. The three-jaw chuck provides a secure fit for driving round shank drills, hex shank tools, and auger bits.

	Chuck Capacity	Lg.		Each
D Crank-Action Hand Drill	5/16″	11″	2297A1	$52.15
E Spiral-Action Ratchet Hand Drill/Screwdriver	1/4″	13 3/16″	2297A2	66.50
F Ratchet-Bit Brace Hand Drill	7/64″-9/32″	10″	2297A3	99.21

Milwaukee Cordless Drill/Drivers

A

B

C

D

A lithium ion battery powers these cordless drills, which means they weigh less and have a longer run-time than Milwaukee cordless drills that use nickel cadmium batteries. All drills have a variable-speed reversing motor; a cushion-grip handle; one or two batteries (as stated); and a carrying case. All are UL listed and meet OSHA requirements.

Styles A, B, and ***C*** have a keyless chuck and an adjustable clutch for adjusting torque. They come with two batteries. *Styles A* and *B* include a 30-min., 120 VAC battery charger. *Style C* includes a 1-hr., 120 VAC battery charger.

Style D has an angle head that swivels 360° and locks in any position. It also has a 360° adjustable side handle and comes with one 28-volt battery. Includes a 1-hr., 120 VAC battery charger. C-UL listed.

Milwaukee 28-Volt Cordless Tool Combination Kit

With this selection of powerful portable tools, you'll be ready to tackle any job, anywhere. Kit includes a hammer drill (29735A97); a Sawzall reciprocating saw (24795A7) with two blades; a 5/8″ arbor circular saw (4154A16) with 6½″ blade; a work light; a belt clip; two 28-volt lithium ion batteries; a 1-hr., 120 VAC battery charger; and a heavy duty carrying bag.

2998A11 ..... **Each** $797.74

Makita Cordless Drill/Drivers

These cordless drills have a variable-speed reversing motor and a keyless chuck for fast bit changes, unless noted. They come with two batteries and a carrying case. All are UL listed and meet OSHA requirements.

Styles A and ***C*** have a cushion-grip handle and an adjustable clutch that lets you adjust torque for driving various screws. All include a 1-hour, 115 VAC battery charger except 27875A51, which includes a 15-minute, 115 VAC charger.

Style B has a 3/8″ keyed chuck. Includes a 30-minute, 115 VAC battery charger.

Style D uses lithium ion batteries, which means it lasts longer and weighs less than drills that use nickel cadmium and nickel metal hydride batteries. Includes a 30-minute, 115 VAC battery charger.

Pistol-Grip Electric Drills

A traditional pistol-grip shape makes these drills suitable for a variety of drilling applications. All have a variable-speed, reversing motor. Drills include a chuck, a chuck key (except the keyless models), and an 8-ft. power cord with plug. Drills with two-prong plugs are double insulated. All operate on 115/120 VAC, 60 Hz and are CSA certified (except Makita models) and UL listed.

Style A have a trigger lock (except 28925A4) so you don't have to hold down the trigger for continuous use.

Style B have a 360° adjustable side handle for additional control (except 29005A61 and 2829A51, which have a two-position side handle). They also have a trigger lock (except 28135A82) so you don't have to hold down the trigger for continuous use. 2829A51 and 2829A94 have a detachable Quik-Lok power cord.

Style C have a two-position side handle for additional control and a detachable Quik-Lok power cord.

Three-Handle Electric Drills

With a powerful motor, these drills have the strength for big drilling and mixing applications. Their top handle provides additional leverage and stability, and a rear D-handle makes them easy to carry. Motors are single-speed reversing, except Style F, which is variable-speed reversing. Gear housing is metal.

Drills come with a chuck, a chuck key, and an 8-ft. power cord with plug (unless noted). Those with two-prong plugs are double insulated. All are UL listed, CSA certified, and meet OSHA requirements.

Style D has a removable top handle and a rear handle that adjusts 360°.

Style E has removable top and rear handles.

Style F has a trigger lock so you don't have to hold down the trigger for continuous use. Also has a removable three-position top handle and a removable two-position rear handle.

Style G has a removable top handle and a two-position rear handle.

Drilling-Debris Containment Bubbles

Make cleanup after drilling easy by containing chips and dust in these disposable bubbles. Use the adhesive backing to stick the bubble to the wall and pull the label to inflate. Drill through the bubble to the wall; then gently pull it off the surface to dispose.

Package quantity is 10.

For Use On		Per Pkg.
Metal	**8937A13**	$26.23
Painted Walls and Wallpaper	**8937A21**	5.01
Wood and Plaster	**8937A22**	5.01

Angle-Head Electric Drills

Get a better angle when drilling into hard-to-reach spaces. These durable drills have variable-speed reversing motors (except E, F, G, and H) and operate on 115/120 VAC, 60 Hz. They include a chuck, a chuck key, and an 8-ft. power cord with plug (except Style H, which has a 9-ft. power cord with plug). Drills with two-prong plugs are double insulated. All are UL listed, CSA certified (except Styles C and E), and meet OSHA requirements.

Style C has an LED light and a two-position side handle.

Style D has a 360° adjustable head, a 360° adjustable side handle, a chuck remover bar, a Quik-Lok power cord, and a carrying case.

Style E has a two-speed reversing motor, a rear handle that rotates 90°, a two-position side handle, an adjustable top handle, and a torque limiter that disengages the motor at low speeds if the bit gets stuck.

Style F has a two-position side handle and a three-position front handle.

Style G has a 360° adjustable head, a three-speed nonreversing motor (400 and 900 rpm angle drilling; 600 rpm straight drilling), a multiposition side handle, and a carrying case.

Style H has a rear handle that rotates 90° and a two-position side handle.

★ With right-angle attachment.

Right-Angle Drilling Attachments

Change your drill into a right-angle tool for access into hard-to-reach spaces. Use with cordless, electric, and air-powered drills.

J General Purpose Attachment—For a variety of maintenance drilling jobs. Comes with a Jacobs drill chuck, a chuck key, and a wrench. Use in drills with ⅜″ and ½″ chuck capacities. Maximum speed is 4000 rpm.

K Heavy Duty Attachment—The gears, shaft, and spindle are heat-treated alloy steel for long life. Use this attachment in drills with ¼″, ⅜″, and ½″ chuck capacities. Furnished with a 1/32″-¼″ capacity Jacobs drill chuck and key. Maximum speed is 2500 rpm.

L Tight-Spot Attachment—Work in tight spaces with as little as 2″ clearance using your ¼″-28 threaded-shank drill bits. For use in drills with ¼″, ⅜″, and ½″ chuck capacities. Maximum speed is 2500 rpm. *Note:* Do not use with drill bits larger than ¼″ dia.

Tight-Spot Attachment Kit includes the tight-spot attachment above and six ¼″-28 threaded-shank high-speed drill bits in the following sizes: (Dia.×O'all Lg.) 3/32″×2½″, ⅛″×13/16″, ⅛″×1½″, ⅛″×2⅜″, 5/32″×1½″, and 3/16″×1½″. You'll also get a 6″ extension, a chuck adapter, a wrench, and a vinyl storage pouch. For replacement threaded-shank drill bits, see below and page 2457.

	For Drill Chuck Capacity	Attachment Chuck Capacity		Each
J General Purpose Attachment	⅜″, ½″	⅜″	**2778A15**	$66.72
K Heavy Duty Attachment	¼″, ⅜″, ½″	¼″	**4450A4**	139.20
L Tight-Spot Attachment	¼″, ⅜″, ½″	—	**8787A14**	32.57
L Tight-Spot Attachment Kit	¼″, ⅜″, ½″	—	**8787A11**	62.48
Replacement Six-Piece Drill Bit Set for 8787A11			**8787A12**	23.85

Cordless Hammer Drills

DeWalt

Milwaukee (29735A126)

Makita

One cordless tool for many jobs—these drills have rotary-percussion mode and rotary-only mode for drilling masonry and other materials and an adjustable clutch for fastening applications. Drills also have a variable-speed reversing motor; a side handle (except Makita model); a cushion-grip handle; a keyless chuck; two lithium-ion batteries; a 115/120 VAC battery charger; and a carrying case. All are UL listed and meet OSHA requirements. See pages 2458-2461 for masonry drill bits. See pages 2411-2412 for replacement batteries and chargers.

Torque ratings are 650 in.-lbs. for 29735A126 and 750 in.-lbs. for 29735A97. All others are not rated.

Electric Hammer Drills

Just push a switch or twist the collar ring and these tools will change from a regular pistol-grip electric drill to a hammer drill—great for drilling in masonry materials. Rotary-percussion mode is for drilling masonry materials using carbide-tipped straight- and hex-shank hammer drill bits (see page 2460). Rotary-only mode is for use with standard drill bits for wood and metal as well as rotary-masonry drill bits (see page 2461).

Drills have a variable-speed reversing motor, a depth gauge, a side handle, a keyed chuck, and a power cord with two-prong plug (unless noted). They are double-insulated (unless noted). All operate on 120 VAC, 60 Hz. UL listed, CSA certified, and meet OSHA requirements.

Style A has a three-prong plug. Drill is not double insulated.

Style B has an overload-protected motor and a trigger lock so you don't have to hold down the trigger for continuous use.

Style C has a detachable Quik-Lok cord. See page 2414 for replacement cord.

	Chuck Cap.	Max. Bit Size Concrete	Max. Bit Size Steel	No-Load Blows per Min.	No-Load rpm	Motor Amps	Cord Lg., ft.	Lg.	Wt., lbs.	Brand	Model No.		Each

Drill Guides for Portable Drills

Drill precise holes without a drill press. Simply attach the chuck on your 3/8" or 1/2" capacity portable drill to the drill guide's drive spindle. A dual-locking knob and handle with an easy-to-read protractor let you position your drill up to 45° in either direction. Guides have a built-in V-groove that centers round material up to 2 1/2" in diameter.

Overall height in vertical position is 11 1/2". Include a chuck and a chuck key.

		Each
Guide with 3/8" Capacity Chuck	8898A21	$40.71
Guide with 1/2" Capacity Chuck	8898A31	49.74

Variable-Diameter Drill Bits

Drill and enlarge several hole sizes with one bit. To drill a specific hole size, place a washer with an ID of the desired hole size over the tip. The washer acts as a stop and prevents the bit from drilling a larger hole. Bits stay centered without a pilot hole, unless noted. All are high-speed steel with a black-oxide treatment and are for use on carbon steel, aluminum, copper, brass, and plastic. Maximum material thickness is 5/64".

Drill Bit Size Range	O'all Lg.	Shank Dia.	Point Angle		Each
1/8"-9/16"	2 7/32"	1/4"	90°	8910A11	$22.22
1/4"-13/16"	2 23/32"	3/8"	90°	8910A12	37.71
5/8"-1 3/16"	2 31/32"	3/8"	82°	8910A13	63.89
1"-1 5/8"	3 9/32"	3/8"	82°	8910A14	83.33
1 1/2"-2 1/16"	2 11/16"	1/2"	None	8910A15▲	114.87

▲ Requires a 1 29/64" dia. pilot hole.

Drill Bit Stop Collars

Ensure identical hole depths every time. Hex keys for set screws are not included; see pages 2838-2847.

Individual Stop Collars—To Order: Please specify exact drill size from the listing below.

Also Available: Stop collars for drill sizes 5/64" to 51/64", wire gauge sizes 1 to 52, letter sizes A to Z, and some metric sizes. Please ask for 8865A91 and specify the exact drill size needed.

Individual Stop Collars

For Drill Bit Sizes	Hex Key Size		Each
1/16", 3/32", 1/8", 5/32", 3/16", 7/32", 1/4"	3/32"	8865A11	$2.77
9/32", 5/16", 11/32", 3/8"	3/32"	8865A12	4.29
13/32", 7/16", 15/32", 1/2"	1/8"	8865A13	6.18
17/32", 9/16"	1/8"	8865A14	9.30
19/32", 5/8"	5/32"	8865A15	9.30
21/32", 11/16", 23/32", 3/4"	5/32"	8865A16	11.25
13/16", 7/8", 15/16", 31/32", 1"	5/32"	8865A17♦	16.19

♦ Hex key size for 1" is 3/16".

Stop Collar Sets

For Drill Bit Sizes	No. of Collars		Per Set
1/8", 3/16", 1/4", 5/16", 3/8", 7/16", 1/2"	7	8959A16	$5.20
5/8", 3/4", 7/8", 1"	4	8959A19	5.60

Cordless Rotary Hammers

Get the drilling and hammering benefits of a rotary hammer with the convenience of cord-free operation. Both hammers have an SDS drive (also known as SDS Plus) and a variable-speed reversing motor with three modes of operation: rotary percussion, rotary only, and percussion only.

In rotary-percussion mode, the tool provides both a rotary drilling and hammering action. Use SDS-Shank Rotary-Hammer Drill Bits (see page 2459) for fast penetration into masonry materials. *Note:* SDS and SDS-Max bits are not interchangeable. Use the rotary-only mode for general purpose drilling and driving fasteners (requires a chuck adapter or a magnetic bit holder; sold separately below). In the percussion-only mode, the tool provides only the hammering action. Use percussion-only mode when working with chisels and other masonry tools (for chisels for rotary hammers, see page 2459).

Maximum bit capacities listed are for drilling in concrete. Hammers come with two 2.4 amp-hr. batteries, a 1-hour charger, a 360° side handle, a depth gauge, and a carrying case. Length is 10½″. UL listed.

Volts	Maximum Capacity Rotary Hammer Drill Bit Size	No-Load Blows per Min.	No-Load rpm	Wt., lbs.	Brand/ Model No.	Battery Type		Each
18	⅞″	0-4100	0-1100	7.6	DeWalt DC212KA	Nickel Cadmium	2842A51	$445.99
36	1″	0-4400	0-1150	7.8	DeWalt DC233KL	Lithium Ion	2842A43	893.30

Electric Rotary Hammers

A

B&C

D-G

H

A powerful and durable hammer mechanism lets you drill deeper, larger holes in less time than with hammer drills. In rotary-percussion mode, the tool provides both a rotary drilling and hammering action. In percussion-only mode, the tool provides only the hammering action. Use percussion-only mode when working with chisels and other masonry tools (for chisels for rotary hammers, see page 2459).

Maximum bit capacities listed are for drilling in concrete. All styles have a built-in safety clutch to protect you and the hammer if the bit gets stuck in your material. They also have a depth gauge (unless noted); a double-insulated motor that operates on 120 VAC, 60 Hz; a power cord with two-prong plug; and a carrying case. All are UL listed (except Style A, which is CSA-US certified) and meet OSHA requirements.

A-E ***SDS-Drive Rotary Hammers—*** Also known as SDS-Plus rotary hammers, these are lightweight and ideal for overhead work and drilling smaller holes. For use with 0.393″ shank diameter SDS-shank drill bits (see 8948A on page 2459). *Note:* SDS and SDS-Max bits are not interchangeable.

Styles A-D have reversing motors.

Styles B-E have a rotary-only mode in addition to rotary-percussion and percussion-only modes. Use rotary-only mode for general purpose drilling and driving fasteners (requires a chuck adapter or a magnetic bit holder; sold separately on this page).

Styles B, D, and E have a chisel-lock feature that allows you to choose from 36 chisel positions (35 positions for Style D) to match the angle of many surfaces.

F ***Spline-Drive Rotary Hammer—*** Designed to drill larger holes than an SDS-drive hammer, this uses spline-shank bits (see 8783A on page 2458 and 3084A on page 2460). Hammer has a variable-speed motor, a cushion-grip handle, and a service-reminder light. It has a vibration reduction in the system for increased user comfort, provides smooth starts, and won't slow down as you drill deeper. Has a chisel-lock feature that allows you to choose from 12 chisel positions to match the angle of many surfaces.

G&H ***SDS-Max-Drive Rotary Hammers—*** A deeper drive system minimizes wobble for straighter, more accurate holes and better overall performance compared to other rotary hammers. These have a chisel-lock feature that allows you to choose from 12 chisel positions to match the angle of many surfaces. For use with 0.708″ shank diameter SDS-Max drill bits (see 88705A and 88865A on page 2459). *Note:* SDS and SDS-Max bits are not interchangeable.

Style H provides smooth starts and won't slow down as you drill deeper. Has a variable-speed motor, a cushion-grip handle, and a service-reminder light.

Chuck Adapter and Magnetic Bit Holder for SDS-Drive Rotary Hammers

Chuck Adapter

Magnetic Bit Holder

Attach one of these tools to your SDS-drive rotary hammer (also known as SDS Plus) so you can perform regular drilling and driving operations with round- or hex-shank drill bits. *Note:* SDS and SDS-Max bits are not interchangeable.

Chuck adapter works with a standard drill chuck for drilling in wood and metal. It has an SDS shank on one end and is threaded (½″-20) on the other end. Use with a drill chuck that has a ½″-20 thread mount so it will properly fit the chuck adapter. Drill chucks are shown on pages 2423-2426.

Magnetic bit holder has an SDS shank and accepts all ¼″ hex shank bits for driving masonry screws.

		Each
Chuck Adapter	27845A51	$37.02
Magnetic Bit Holder	8845A21	23.78

Cutters for Magnetic-Base Drills

Cutter

Also called annular cutters, these cut on the periphery of the hole and produce a solid slug. They work with magnetic-base drills that have a 3/4″ arbor (see Compact Magnetic-Base Drills on page 2419). You can also pair them with an arbor adapter (sold separately below) when using a manual drill press or milling machine. *Note:* Carbide-tipped cutters are not for use with magnetic-base drill 8837A21 (Model No. USA101) on page 2419.

High-Speed Steel and Cobalt Steel Cutters—*Uncoated high-speed steel* has a bright finish and is for general purpose cutting of a wide range of materials. *TiN (titanium nitride) coated high-speed steel* lasts longer than uncoated high-speed steel. *Cobalt steel* offers better heat and abrasion resistance than high-speed steel.

Carbide-Tipped Cutters—Last longer than high-speed steel and cobalt steel cutters and are for high-volume cutting of difficult-to-machine materials such as stainless steel, cast iron, and titanium. *Note:* These cutters are more sensitive to shock and vibration compared to other cutters.

Pilot Pins—Also called ejector pins, these align the cutter to the desired position and eject the slug.

Arbor Adapters—Allow you to use cutters on a manual drill press and milling machine. *3/4″ straight shank* fits a 3/4″ capacity drill chuck or a 3/4″ R8 collet on a milling machine. *#2* and *#3 Morse taper shanks* are for use on a drill press.

Compact Magnetic-Base Drills

Light enough to carry to your jobsite. All drills have a ¾″ arbor for use with cutters on page 2418. Drills also have a feed handle that mounts on the left or right side of the drill. Holding force (also called drill-point breakaway) is calculated against a 1″ thick steel plate. Electromagnetic base attaches to flat ferrous surfaces (such as steel and cast iron) that are at least ⅜″ thick.

Hougen Drills—Include a 9-ft. power cord with three-prong plug, a 4-ft. safety chain, and a fitted carrying case. 2831A44 and 2831A46 have a 1-pint capacity coolant reservoir (coolant not included).

Jancy Drills—Include an 8-ft. power cord with three-prong plug, a 5-ft. safety strap, a retractable chip shield, and a carrying case. They also have a 1-pint capacity coolant reservoir except 8837A21, which has a 13-oz. capacity coolant reservoir. 2840A39 has a rear-mounted control panel and does not have a valve. Coolant flows automatically when pen touches material. 8837A21 and *A22* are UL listed and have a valve to adjust coolant flow and a side-mounted control panel. *Chucks* and *adapters* allow 8837A21 and 8837A22 to accept standard drill bits.

Heavy Duty Magnetic-Base Drills with Tapping Capability

Switch these drills from forward to reverse without stopping—ideal for both drilling and tapping applications (not recommended for use with pipe taps). In addition, a dial lets you adjust the speed to match your application, making these great for drilling hard materials at slow speeds.

For use with carbide-tipped cutters sold separately below. Holding force (also called drill point breakaway) is approximately 1600 lbs. and is calculated against a 1″ steel plate. Base attaches to flat ferrous surfaces (such as steel and cast iron) that are at least ½″ thick. Motor is 120 VAC, 60 Hz. All include a spoked feed handle that mounts on either side, a 9-ft. power cord with three-prong plug, and a 6-ft. safety chain. Drills with ½″ and ¾″ chuck mount style also include a drill chuck and key. Bases and motors are UL listed.

Adjustable-position base drills let you lock the magnet to secure the base and then move the motor to center the cutter for pinpoint accuracy. You can also move the motor ¾″ forward and backward and 20° left and right.

Arbor Adapters

Required when using the carbide-tipped cutters above. They come with an oiler, oil hose, and pilot pin. The ***¾″ straight shank*** arbor adapter fits a ¾″ drill chuck or a ¾″ collet on a milling machine. The ***#3 Morse taper*** shank arbor adapter fits a magnetic-base drill or drill press.

		Each
¾″ Straight Shank	30975A58	$116.98
#3 Morse Taper	30975A61	116.98

Chuck and Arbor Kit

Allows magnetic-base drills with a #3 Morse taper mount style to accept standard drill bits. Includes a ¾″ capacity drill chuck, a chuck key, and a chuck arbor.

2805A61 ..... **Each** $111.00

Cutting Fluid

When mixed with water, this 16-oz. bottle makes 1 gallon of solution.

31625A61 ..... **Each** $7.64

Mini Magnetic Drill Base

Drill Not Included

Get the accuracy of a drill press when you use this lightweight, portable magnetic drill base with Milwaukee electric drill models 0234-6 and 0244-1 (for Milwaukee model 0234-6, see 2829A51 on page 2414). This powerful electromagnetic base firmly attaches to flat, ferrous surfaces such as steel and cast iron that are at least 0.20″ thick. Holding force (also called drill-point breakaway) is 770 lbs. and is calculated against a 1″ steel plate. It is controlled by an on/off toggle switch and measures 9½″ Ht. × 9″ Wd. Drill travel is 3.9″. Operates on 120 VAC, 60 Hz and weighs only 12 lbs. Comes with a 7½-ft. power cord with three-prong plug.

28125A24 ..... **Each** $912.00

Multispeed Floor Drill Presses

20″ (16 Speed)

Select from a number of speeds by repositioning the drive belt before starting the drill press. Motors are totally enclosed fan cooled, except 28695A51, which is open dripproof. Maximum hole size is based on drilling in steel, except for 28785A61, which is based on drilling in cast iron.

All presses have a three-spoke feed handle; a depth gauge graduated in 16ths of an inch; a drill chuck, a chuck key, and a 6-ft. power cord with three-prong plug. Presses are also wired for 115 volts (except 28785A61, which is wired for 120 volts). All except 28785A61 have a built-in worklight (bulb not included; see 1532K41 on page 683). Head, table, and base are made of durable cast iron. Columns are steel (except 28785A61, which is cast iron).

Variable-Speed Floor Drill Presses

General Purpose 18″

Heavy Duty 20″

Simply turn the dial on these drill presses while they are running to get the optimum speed for your job. All include a three-spoke feed handle and a depth gauge graduated in 16ths of an inch. Head, base, and table are cast iron. Maximum hole size is based on drilling in steel.

General Purpose 18″ Drill Press— A laser projects a crosshair at the point of bit contact and a digital readout displays the spindle speed. Sections on each side of the table slide outward, extending the work area to 16″×26″. Motor is totally enclosed fan cooled. Includes a built-in worklight (bulb included), a keyless drill chuck, and a 7½-ft. power cord with three-prong plug. Wired for 115 volts.

Heavy Duty Drill Presses— The weight and rigidity of these presses prevent vibration so you can maintain close tolerances for high-quality metal drilling.

15″ drill press motor is totally enclosed fan cooled. Includes a drill chuck and key and a 6-ft. power cord with three-prong plug. Wired for 115 volts.

20″ drill press motor is open dripproof. Includes a safety guard that swings away for easy tool changes and an 8-ft. power cord with three-prong plug. Wired for 115 volts. For chucks and arbors, see pages 2423-2427.

Also Available: 220 VAC, 3 ph and 440 VAC, 3 ph versions of 2776A75. Please ask for 2776A71 and specify voltage.

Extended-Reach Tilting-Head Drill Presses

If you have a large, odd-shaped piece of material, the head of these drill presses moves 12″ forward and backward and tilts 45° left and 90° right (as viewed when facing the drill press). Graduated in 1° increments with a locking stop at 0°. Presses run at five speeds. Motors are totally enclosed fan cooled.

Maximum hole size is based on drilling in steel. Maximum hole size for drilling in cast iron is 5/8″. Both include a graduated depth gauge, a drill chuck and key, and a 6½-ft. power cord with three-prong plug. Head, table, column, and base are cast iron.

Bench Model

General Purpose Bench Drill Presses

Set these on top of your workbench for light- to medium-duty drilling jobs.

Maximum hole size is based on drilling in steel. All have a three-spoke feed handle, a graduated depth gauge, a drill chuck and key, and a 6-ft. power cord with three-prong plug. Head, table, and base are cast iron. Column is steel, except 10″ (5 speed) drill press column, which is cast iron.

10″ (5 speed) drill press is our most economical light-duty drill press. Motor is totally enclosed fan cooled.

12″ (variable speed) drill press allows you to select the optimum speed for the tool you're using and the material being drilled. Plus, you can change the speed while the drill is running. Motor is open dripproof. Includes a worklight (bulb not included; see 1509K26 on page 687).

15″ (16 speed) drill press is our largest capacity bench unit. Motor is open dripproof and comes wired for 115 volts. Includes a built-in worklight (bulb not included; see 1532K41 on page 683).

Safety Guard for Drill Presses

Keep your fingers and hands protected from your drill bit, drill chuck, and flying chips. This guard retracts as the drill penetrates your material, lowers when the spindle is raised, and flips out of the way for quick bit changes. A depth adjustment knob allows for quick adjusting of the guard position.

Body is made from high-impact clear plastic for an unobstructed view. Includes five clamps for 1¾″ (45 mm), 2″ (52 mm), 2⅜″ (60 mm), 2.6″ (66 mm), and 3″ (75 mm) drill press spindle shafts (also known as quills).

Shown on Drill Press (Drill Press and Bit Not Included)

Small-Hole Precision Bench Drill Press

A sensitive belt-drive motor reduces drill breakage and damage. Perfect for drilling small holes in steel, stainless steel, nonferrous metals (such as brass and bronze), plastic, graphite, and printed circuit boards. Also great for diamond drilling in ceramic, sapphire, and glass. Motor is self contained.

Maximum hole size is based on drilling in steel. Includes a depth gauge graduated in 0.001″ increments; an Albrecht keyless drill chuck; and a 7-ft. cord with three-prong plug. Column is steel; head is cast aluminum; base is cast iron.

	8929A21 ..... $1,745.33

Light-Pressure Drill-Feed Attachment

When drilling small holes with a drill press or milling machine, this attachment lets you apply light feed pressure with your fingers while the machine rotates the bit. A spring-loaded, ball-bearing drill feed automatically retracts when the gripping ring is released. Attachment has a #0 Jacobs taper and a 1/2″ dia. shank that fits into a chuck or holder. Drill spindle travel length is 3/4″.

		Each
Light-Pressure Drill-Feed Attachment	3100A45	$63.93
C15-J0 Albrecht Keyless Chuck 0.005″-1/16″ (0-1.5 mm)	2823A11	276.45

#0 Jacobs Key-Style Chuck 0.0135″-5/32″ (0.35-4 mm)	2812A11	69.37

Small-Hole Drilling Adapter

Drilling extremely small holes with your drill press is easy with this adapter. It securely holds a #99 (0.0051″) to #60 (0.040″) wire gauge drill bit.

For use in any 1/8″ or 3/16″ collet or adjustable drill chuck. Shank diameter is 1/8″. Head diameter is 1/4″. Overall length is 1 5/16″.

30505A5 ..... **Each** $7.01

Drilling/Milling Machines

With Optional Machine Stand

Get the dual capability of drilling and milling in one 12-speed machine. Motors are totally enclosed fan cooled and are UL listed.

Maximum hole size, face mill capacity, and end mill capacity are based on machining steel. Both machines have an angle drill-press vise; a head that rotates 360°; table hand wheels with micrometer dials graduated in 0.001″ increments; a depth gauge graduated in 16ths of an inch; a drill chuck with key and arbor; a work light (bulb not included; see 1532K41 on page 683); and a 6-ft. power cord (no plug). Head, table, and column are cast iron; base is steel.

Manual drill feed machine lets you manually adjust the feed of the spindle with rapid- and fine-feed controls.

Power drill feed machine easily switches between three power drill feeds: 0.004″, 0.007″, and 0.01″ per revolution.

8774A41 ..... **Each** $227.46

Optional Drilling/Milling Machine Power Table Feed— Quickly reposition your table for long cuts. This easy-to-install table feed is for both manual and power drill feed machines. It operates in forward/reverse. Adjustable stops allow automatic shut-off. Has a 1/15 hp motor that runs on 110 VAC, 0.5 amps. Includes an 8-ft. power cord with three-prong plug. Weighs 33 lbs.

8774A45 ..... **Each** $726.36

Light Duty Jacobs Drill Chucks

Great for occasional use. These chucks thread mount directly onto the threaded spindle of a portable drill. For use in both forward and reverse tool operation. All come with a chuck key and are made of steel. Chuck with a minimum inch capacity of 0.028″ holds a #70 drill bit.

Capacity Inch	Capacity mm	Mount	Key No.	Model No.		Each

General Purpose Jacobs Drill Chucks

Jacobs Taper and Thread Mount

Slot-Drive Jacobs Taper Mount

Slot-Drive Straight Mount

Pin-Drive Jacobs Taper Mount

The combination of strength and durability makes these chucks the most widely used for general purpose applications. All chucks come with a chuck key and are made of steel. Chucks with a minimum inch capacity of 0.0135″ hold a #80 drill bit; chucks with a minimum inch capacity of 0.040″ hold a #60 drill bit.

Jacobs taper mount chucks require an arbor (sold separately on page 2427). For use in both forward and reverse tool operation.

Thread mount chucks mount directly onto the threaded spindle of a portable drill. Not for use in reverse tool operation, except chucks that contain the letters "BA" in the model number. Jacobs 33BA chucks can be used on a hammer drill.

Slot-drive and ***pin-drive*** (also known as positive drive) chucks mount onto a spindle or arbor for use in high-torque applications.

Corrosion-Resistant Jacobs Drill Chucks

When you need the rust and corrosion resistance of stainless steel, reach for these chucks. For use in both forward and reverse tool operation. All come with a chuck key and are made of Type 416 stainless steel and hold a #70 drill bit. ***Jacobs taper mount*** chucks require an arbor (sold separately on page 2427). ***Thread mount*** chucks mount directly onto the threaded spindle of a portable drill.

★ JT = Jacobs Taper.

Extra-Grip Jacobs Drill Chucks

A ball-bearing design provides increased gripping force to keep bits from slipping, allowing these chucks to take on high-torque drilling applications. Also known as super chucks, these are excellent for use on production drilling machines, milling machines, jig borers, and lathes. All chucks are Jacobs taper mount and require an arbor (sold separately on page 2427). For use in both forward and reverse tool operation. They come with a chuck key and are made of steel. Chucks with a minimum inch capacity of 0.040″ hold a #60 drill bit.

Economy Drill Chucks

Similar in design to our General Purpose Jacobs Drill Chucks, these chucks are an economical alternative. For use in both forward and reverse tool operation. All include a chuck key and are made of steel. Chucks with a minimum inch capacity of 0.0135″ hold a #80 drill bit; chucks with a minimum inch capacity of 0.040″ hold a #60 drill bit.

Jacobs taper mount chucks require an arbor (sold separately on page 2427). ***Thread mount*** chucks mount directly onto the threaded spindle of a portable drill.

Drill Chucks for Hammer Drills

A special gripping ring in these chucks prevents drill bits from loosening during heavy hammer-drilling operations. Chucks mount directly onto the threaded spindle of a hammer drill. For use in both forward and reverse tool operation. All come with a chuck key and are made of steel.

Keys for Jacobs and Rohm Drill Chucks—Fixed and Self-Ejecting Pin

All keys are made of steel, except 3169A24 and 3169A25, which are Type 416 stainless steel.

Self-ejecting pin keys have improved safety compared to fixed-pin keys. They have a spring-loaded pin that ejects the key from the chuck when released, preventing it from being left in the chuck.

Extra-long keys have handles that are almost twice the length of standard-length keys and provide more leverage for tightening power.

Drill Chuck Removal Wedge Sets

Easily remove taper mount drill chucks from arbors and spindles with these steel wedge sets. Each set consists of two wedges. Simply place one wedge on each side of the chuck, and then hammer each wedge end until the chuck is removed.

For Use on Jacobs Taper No.		Per Set
1	29225A34	$8.10
2	29225A35	8.10
3	29225A36	8.10
6, 33	29225A37	8.10

Extra-Grip Keyless Drill Chucks

Ball bearings provide increased gripping force to keep your bits from slipping. For use in both forward and reverse tool operation. All chucks are made of steel unless otherwise stated.

Jacobs taper mount chucks require an arbor (sold separately on page 2427).

Thread mount chucks mount directly onto the threaded spindle of a portable drill. Chucks with a minimum inch capacity of "0" hold a #80 (0.0135″) drill bit.

Ratchet-locking thread mount chucks allow easier tightening and releasing of drill bits and other tools. They have carbide jaws, which are harder and grip tighter than steel jaws.

1/2″ Chuck Capacity

Hex-Shank Drill Chucks for Power Screwdrivers and Impact Drivers

Convert your power screwdriver or impact driver into a versatile drill. Also known as adapt-a-drive, these chucks have a standard 1/4″ hex shank that fits the hex socket of most power screwdrivers and impact drivers. For use in both forward and reverse tool operation.

Choose from keyed or keyless chucks. 28055A71 is made of steel and is furnished with a chuck key. Chuck holds a #70 drill bit. 28055A72 has a steel body and a plastic sleeve.

Capacity Inch	Capacity mm	Key No.	Jacobs Model No.		Each

Keyed

Keyless

Keyless Drill Chucks for Impact Wrenches

Transform standard impact wrenches into efficient drilling tools. These chucks mount directly onto the square-drive spindle of your impact wrench. Not for use in reverse tool operation. All are made of steel.

Capacity Inch	Capacity mm	Mount		Each
3/32-3/8	2.5-10	3/8″ Square	3167A12	$68.58
1/8-1/2	3-13	1/2″ Square	3167A11	86.66

Precision Keyless Drill Chucks

A self-tightening feature causes the chuck to grip tighter as torque increases, which prevents tool-shank slippage and allows for precise drilling. For use with drill presses, jig borers, and milling machines. Not for use in reverse tool operation. Chucks are Jacobs taper mount and require an arbor (sold separately on page 2427), except Albrecht stainless steel precision chucks, which have a through-hole and mount directly onto your machine's threaded spindle.

Albrecht*—**The original precision keyless drill chucks. ***Albrecht stainless steel precision chucks resist rust and corrosion and are ideal when tools have to be sterilized. All are made entirely of stainless steel.

Also Available: Replacement hoods, ball bearing sets, collars, jaws, jaw guides, shells, drive pins, and body and spindle assemblies for Albrecht steel precision chucks. Please ask for 2825A6 and specify part desired and Albrecht chuck number.

Jacobs*—**Chucks with a minimum inch capacity of 0.012″ hold a #83 drill bit; 0.02″ hold a #76 drill bit; 0.039″ hold a #61 drill bit; and 0.118″ hold a #31 drill bit. ***Jacobs extra-grip steel precision chucks have milled wrench flats and a spanner wrench that allow additional tightening to increase gripping torque up to three times greater than hand tightening. These chucks also resist loosening when used on high-speed machines with instant spindle stop.

Albrecht Precision Keyless Drill Chucks with Integral Arbor

R8 (Bridgeport) Shank

The integral arbor offers greater accuracy and rigidity than a drill chuck used with a separate arbor. Not for use in reverse tool operation. All are made of steel.

Also Available: Replacement hoods, jaw guides, jaws, and drive pins. Please ask for 30075A6 and specify part and Albrecht chuck number.

Economy Precision Keyless Drill Chucks

Ideal for close-tolerance drilling with drill presses, jig borers, and milling machines, these all-steel chucks are an economical alternative to Albrecht and Jacobs precision keyless chucks. All are Jacobs taper mount and require an arbor (sold separately on page 2427). Chucks with a minimum inch capacity of "0" hold a #80 (0.0135″) drill bit.

★ JT = Jacobs Taper.

Taper Shank Removal Tools

Also called drill drifts or drift keys, these tools are designed to separate Morse taper shank cutting tools from machinery spindles and Morse Taper Adapters (also known as sleeves and extension sockets; see page 2427). To use, simply insert the removal tool into spindle slot and tap with a hammer to release the cutting tool. Made of steel.

For Morse Taper No.	O'all Lg.		Each
1	4 1/2″	2796A11	$8.75

4, 5	9 1/4″	2796A24	15.68

Machinable-End Morse Taper Arbors

Create your own Morse taper arbors to suit your job requirements. Made of soft steel (Type 1144), these blank-end arbors are easy to machine. Arbors have a Morse taper shank.

	Machinable End			
Morse Taper No.	Body Dia.	Body Lg.		Each
2	1 3/4″	2 1/8″	2862A11	$47.67
3	1 3/4″	2 1/8″	2862A12	56.23
4	2 1/2″	3″	2862A13	63.59
5	3″	4 1/16″	2862A14	105.08

Drill Chuck Arbors

Attach your drill chuck to your machine's spindle with one of these arbors. Choose an arbor with one end that fits into your machine spindle (Morse taper, straight shank, or R8 taper) and one end that fits your drill chuck mount (Jacobs taper or threaded). All arbors are made of hardened, precision-ground steel.

The following is a list of machines and some of their spindle types:
Drill Press = Morse Taper Spindle
CNC/Lathe = Straight Shank Spindle
Milling Machine = R8 Taper Spindle

If your machine spindle is Morse taper, measure the internal diameter of the spindle or chuck (which will be equal to the diameter of the arbor you need) and use the tables to the right to determine the taper number.

Morse Taper Adapters

If your Morse taper arbor is too small or large for your machine spindle or you need additional reach, insert it into one of these adapters. All are made of hardened steel.

Adapters are also known as sleeves or shell sockets. They adapt smaller Morse taper arbors to larger Morse taper machine spindles.

Extended-reach adapters are also known as extension sockets and are longer for hard-to-reach spots. In addition to extending your Morse taper arbor, these adapters also adapt larger Morse taper shank tools to smaller Morse taper machine spindles.

About Drill Bits

Bit Materials

High-speed steel bits are for general use in most materials.

Cobalt steel bits are better than high-speed steel for drilling very hard materials such as stainless steel, titanium alloys, and nickel alloys.

Carbide-tipped bits resist wear better than high-speed steel and cobalt steel, particularly in abrasive materials such as fiberglass and aluminum.

Carbide bits are harder, stronger, and offer greater wear resistance than high-speed steel, cobalt steel, and carbide-tipped bits. However, they require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Treatments & Coatings

Uncoated (Bright Finish)— Surface is untreated. For general purpose drilling of most metals, wood, and plastic.

Black-Oxide Treatment— Color is dull black. For drilling of ferrous metals such as steel, stainless steel, and cast iron.

Black-and-Gold-Oxide Treatment— Color is black and gold. Resists breakage better than black-oxide bits when drilling ferrous metals such as steel, stainless steel, and cast iron.

Extended-Life Coatings— These coatings extend the life of bits by forming a barrier against heat and abrasion.

Extended-Life Coating	Color
Long-Life TiN (titanium nitride)	Bright gold
Extra-Life TiCN (titanium carbonitride)	Violet/blue-gray
Super-Life TiAlN (titanium aluminum nitride)	Dark violet/blue-gray
Ultra-Life TiN/TiAlN	Dark violet/blue-gray

Bit Shank Diameter

The shank diameter of each drill bit is the same as or slightly smaller than the drill bit size, unless otherwise stated.

Bit Length

Though ***jobbers' length*** bits are highly versatile, you may require shorter or longer bits for your specific application.

Short-length bits have maximum rigidity and a shorter overall length for drilling straighter, shallower holes than jobbers' and maintenance-length bits.

Maintenance-length bits are more rigid and drill shallower holes than jobbers' length bits.

Extended-reach bits are for hard-to-reach spots and drilling deeper holes than jobbers' length bits.

Short Length
Pages 2440, 2442, 2444, 2446-2448

Maintenance Length
Page 2445

Jobbers' Length
Pages 2430-2445

Extended Reach
Pages 2449-2451

Jobbers' Bits Application Guide

Jobbers' drill bits are the most widely used because they're rigid enough to make accurate hole sizes in a variety of materials and long enough to drill the hole depths required for most applications.

Select a jobbers' drill bit based on the material you plan to drill. Bits with a "Good" rating are both effective and economical; bits with a "Better" rating offer longer life; and bits with a "Best" rating are designed for superior performance.

Note: For drill bits for masonry, concrete, and wood, see pages 2458-2464.

Drill Bit Extensions

Add length to your drill bit for hard-to-reach areas. Both the extension collet and the extension body are required for use (sold separately). Simply insert your drill bit into the collet; then thread the collet onto the extension and tighten with a wrench. All are made of steel.

Extension Collets—Each collet fits a specific drill bit size. **To Order:** Please specify the exact drill bit size to be used in the collet within the range of sizes listed.

For Drill Bit Sizes	EXTENSION COLLETS Collet Hex Size		Each	EXTENSION BODY Shank Dia.	O'all Dia.	4″ Length	Each	9″ Length	Each

Miniature Drill Bit Extensions

Smaller than our other drill bit extensions, these are perfect for extra reach when using small drill bit sizes. Collet and body are one piece and no special tools are needed to change the drill bit. Simply insert the drill bit into the collet end of the extension and tighten the knurled collar. Made of steel.

To Order: Each extension fits a specific drill bit size. Please specify the exact drill bit size to be used in the extension within the range of sizes listed.

Hex-Shank Adapters for Round-Shank Drill Bits

Use your round-shank drill bits in your power screwdriver or other tool that accepts a 1/4″ hex shank. Each adapter accepts a variety of round-shank drill bit sizes. Made of steel.

General Purpose High-Speed Steel Jobbers' Drill Bit Sets

Combination Set

29-Piece Fractional Set

Get the drill bit sizes you need for general purpose applications in one convenient set. Sets contain one bit per size. They come in a metal case with holes for drill bits that are marked with the bit size for quick reference.

135° point angle bits perform better than 118° point angle bits on hard materials, and they produce smaller chips to reduce clogging. All have a split point that keeps the bit centered without a pilot hole to meet NAS 907 Type B aerospace specifications (except wire gauge sizes 80-53, metric sizes smaller than 1.6 mm, and where noted).

General Purpose High-Speed Steel Jobbers' Drill Bit Master Sets

These master sets contain multiple bits of each size—choose from fractional, letter, and wire gauge sizes. Drill bits are black-oxide treated high-speed steel.

All bits have a 135° point angle that produces small chips to prevent clogging. They also have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type B aerospace specifications, except wire gauge sizes 60-53. Sets come in a 14⅝″ Lg.×7⅜″ Wd.×7¾″ Ht. steel drawer cabinet with compartments marked with the bit size for quick reference. Fractional set and letter set have three drawers; wire gauge set has five drawers.

Heat-Resistant Cobalt Steel Jobbers' Drill Bit Sets

Each handy set includes a variety of cobalt steel jobbers' drill bits, which are harder and more heat-resistant than high-speed steel drill bits. For use on hard metals including stainless steel, nickel alloy, and titanium. Sets contain one bit per size. They come in a metal case with holes for drill bits that are marked with the bit size for quick reference.

All bits have a 135° point angle, which produces small chips to prevent clogging. All have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type J aerospace specifications, except 87875A24, wire gauge sizes 80-53, and metric sizes smaller than 1.6 mm.

For information about drill bits and decimal equivalents, see pages 2428-2429.

General Purpose High-Speed Steel Jobbers' Drill Bits

High-speed steel combined with ideal reach, drilling depth, and rigidity make these bits highly versatile.

135° Point Angle— Perform better than 118° point angle bits on hard materials and produce smaller chips to prevent clogging. They also have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type B aerospace specifications, unless noted.

Black-oxide bits are for use on steel, stainless steel, and cast iron. *Black-and-gold-oxide* bits are for use on steel, stainless steel, aluminum, copper, and plastic. *Long-life TiN (titanium nitride) coated* bits last longer than black-oxide and black-and-gold-oxide bits. For use on alloy steel, stainless steel, cast iron, brass, bronze, plastic, and fiberglass. *Extra-life TiCN (titanium carbonitride) coated* bits last longer than long-life TiN-coated bits. For use on alloy steel, stainless steel, cast iron, bronze, and fiberglass. *Super-life TiAlN (titanium aluminum nitride) coated* bits last longer than extra-life TiCN-coated bits. For use on alloy steel, stainless steel, cast iron, nickel alloys, titanium alloys, brass, bronze, and fiberglass.

118° Point Angle— *Metric-size 118° point angle* bits are made to DIN length specifications.

Uncoated (bright finish) bits are for use on carbon steel, aluminum, copper, brass, bronze, and plastic. *Black-oxide* bits are for use on steel and cast iron. *Black-and-gold-oxide* bits are for use on steel, stainless steel, aluminum, copper, and plastic. *Long-life TiN (titanium nitride) coated* bits last longer than uncoated, black-oxide, and black-and-gold-oxide bits. For use on steel, cast iron, brass, and bronze.

(Continued on following page)

For information about drill bits and decimal equivalents, see pages 2428-2429.

General Purpose High-Speed Steel Jobbers' Drill Bits *(Continued from previous page)*

High-speed steel combined with ideal reach, drilling depth, and rigidity make these bits highly versatile.

135° Point Angle— Perform better than 118° point angle bits on hard materials and produce smaller chips to prevent clogging. They also have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type B aerospace specifications, unless noted.

Black-oxide bits are for use on steel, stainless steel, and cast iron. *Black-and-gold-oxide* bits are for use on steel, stainless steel, aluminum, copper, and plastic. *Long-life TiN (titanium nitride) coated* bits last longer than black-oxide and black-and-gold-oxide bits. For use on alloy steel, stainless steel, cast iron, brass, bronze, plastic, and fiberglass. *Extra-life TiCN (titanium carbonitride) coated* bits last longer than long-life TiN-coated bits. For use on alloy steel, stainless steel, cast iron, bronze, and fiberglass. *Super-life TiAlN (titanium aluminum nitride) coated* bits last longer than extra-life TiCN-coated bits. For use on alloy steel, stainless steel, cast iron, nickel alloys, titanium alloys, brass, bronze, and fiberglass.

118° Point Angle— *Metric-size 118° point angle* bits are made to DIN length specifications.

Uncoated (bright finish) bits are for use on carbon steel, aluminum, copper, brass, bronze, and plastic. *Black-oxide* bits are for use on steel and cast iron. *Black-and-gold-oxide* bits are for use on steel, stainless steel, aluminum, copper, and plastic. *Long-life TiN (titanium nitride) coated* bits last longer than uncoated, black-oxide, and black-and-gold-oxide bits. For use on steel, cast iron, brass, and bronze.

For information about drill bits and decimal equivalents, see pages 2428-2429.

General Purpose High-Speed Steel Jobbers' Drill Bits *(Continued from previous page)*

High-speed steel combined with ideal reach, drilling depth, and rigidity make these bits highly versatile.

118° Point Angle— All 118° metric size bits are made to DIN length specifications. *Black-oxide* bits are for use on steel and cast iron. *Long-life TiN (titanium nitride) coated* bits last longer than black-oxide bits. For use on steel, cast iron, brass, and bronze.

Heavy Duty Chip-Clearing High-Speed Steel Jobbers' Drill Bits

Also known as parabolic-flute drill bits, these resist breakage better than Chip-Clearing High-Speed Steel Jobbers' Drill Bits on page 2437 and have wider flutes to lift chips out of the hole, reduce clogging, and improve coolant flow. They have a 135° split point that keeps the bit centered without a pilot hole.

Uncoated (bright finish) bits are for use on steel, stainless steel (300 and 400 series), cast iron, aluminum, copper, and brass.

Black-oxide bits have improved chip flow and wear resistance compared to uncoated bits. For use on steel, stainless steel (300 and 400 series), and cast iron.

Long-life TiN (titanium nitride) coated bits last longer than uncoated and black-oxide bits. For use on steel, stainless steel (300 and 400 series), cast iron, aluminum, brass, and copper.

For information about drill bits and decimal equivalents, see pages 2428-2429.

Chip-Clearing High-Speed Steel Jobbers' Drill Bits

The flutes on these bits are more tightly spiraled than the flutes on General Purpose High-Speed Steel Jobbers' Drill Bits, improving their ability to lift chips out of the hole. Also known as fast-spiral bits, they have a 135° point angle with a split point that keeps the bit centered without a pilot hole. All have a black-and-gold oxide finish and are for use on most metals including steel, stainless steel, and cast iron. Also for use on plastic.

Also Available: Uncoated (bright finish) fractional sizes 1/16" to 1/2" with a 118° point angle; uncoated (bright finish) wire gauge sizes 80 to 1 with a 118° point angle; and black-oxide metric sizes 1 to 8.5 mm with a 135° point angle. Please ask for 2912A71 for fractional sizes; 2912A72 for wire gauge sizes; or 30055A91 for metric sizes. Also specify exact size.

Heavy Duty Chip-Clearing Cobalt Steel Jobbers' Drill Bits

Resist heat and reduce clogs when drilling stainless steel (300 and 400 series), nickel alloys, and titanium (unless otherwise stated). Also known as parabolic-flute drill bits, these are made of cobalt steel and have wide flutes to lift chips out of the hole. They have a 135° split point that keeps the bit centered without a pilot hole. ***TiN (titanium nitride) coated*** drill bits last longer than uncoated (bright finish) drill bits. They are not for use on titanium.

Also Available: Wire gauge sizes 52 to 1. All are uncoated (bright finish) with a 135° point angle. Please ask for 28555A11 and specify exact size. See chart on page 2433 for overall length and drilling depth.

Cobalt Steel Jobbers' Drill Bits for Shallow Holes

Short flutes make these bits ideal for drilling shallow holes. They are also more rigid and provide straighter drilling compared to our other jobbers' drill bits. All are made of cobalt steel with a black-oxide surface treatment for heat resistance. For use on alloy steel, stainless steel, hardened steel, nickel alloys, and titanium alloys. Bits have a 135° point angle that produces small chips to prevent clogging. They also have a split point that keeps the bit centered without a pilot hole.

6-1	3146A611	3.74	3.18

For information about drill bits and decimal equivalents, see pages 2428-2429.

Heat-Resistant Cobalt Steel Jobbers' Drill Bits

If your bits can't take the heat, replace them with these cobalt steel bits. Unlike high-speed steel bits, these stay sharp at the high temperatures generated when drilling materials such as stainless steel and nickel alloys. All have a 135° point angle, except Ultra-Life TiN/TiAlN-coated bits, that produces small chips to reduce clogging. They also have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type J aerospace specifications, unless noted.

Uncoated (bright finish) bits are for drilling stainless steel, alloy steel, tool steel, nickel alloys, and titanium alloys.

Long-life TiN (titanium nitride) coated bits last longer than uncoated bits. For use on stainless steel, alloy steel, tool steel, and cast iron.

Ultra-life TiN/TiAlN (titanium nitride/titanium aluminum nitride) coated bits offer the longest life for drilling stainless steel, alloy steel, tool steel, cast iron, and nickel alloys.

High-Speed Steel Jobbers' Drill Bits for Tight-Tolerance Holes

Also known as double-margin drill bits, these have a flute construction that keeps them centered as they drill, giving you rounder holes with a tighter tolerance than other bits provide. All are TiN (titanium nitride) coated high-speed steel and have a 118° point angle. For use on steel and cast iron.

Also Available: Solid carbide fractional sizes ⅛" to ½" with a 145° point angle and TiCN (titanium carbonitride) or AlTiN (aluminum titanium nitride) coating. Please ask for 8980A91 and specify size and coating.

Drill Bit Size	O'all Lg.	Drilling Depth	Each
3/16"	3½"	2.3"	3021A26	$3.38
13/64"	3⅝"	2.4"	3021A27	4.62
7/32"	3¾"	2.5"	3021A28	4.75
¼"	4"	2.8"	3021A31	5.04
17/64"	4⅛"	2.9"	3021A32	$8.13
9/32"	4¼"	2.9"	3021A33	8.43
5/16"	4½"	3.2"	3021A35	9.11
⅜"	5"	3.6"	3021A39	12.19
25/64"	5⅛"	3.8"	3021A41	$14.62
7/16"	5½"	4.1"	3021A44	16.23
½"	6"	4.5"	3021A48	18.71

For information about drill bits and decimal equivalents, see pages 2428-2429.

Smooth-Finish Three-Flute Carbide Jobbers' Drill Bits

With three cutting edges instead of the typical two, these uncoated (bright finish) solid-carbide bits drill holes with a smoother finish than other drill bits. For use on steel, stainless steel, nickel alloys, aluminum, copper, bronze, and cast iron. All bits have a 150° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Also Available: Wire gauge sizes 36 to 1 and letter sizes A to Z. For wire gauge sizes, please ask for 3171A96 and specify size. For letter sizes, please ask for 2792A81 and specify size.

Carbide-Tipped Drill Bits for Difficult-to-Drill Materials

A steel body and a carbide cutting edge give these bits the perfect combination of long life and vibration resistance for difficult-to-drill materials. For use on cast iron, aluminum, copper, brass, bronze, titanium, plastic, and composites. All bits are uncoated (bright finish).

Short-length bits have a shorter overall length for maximum rigidity. They drill straighter, shallower holes than jobbers' length bits. Also known as screw-machine and stub-length drill bits.

135° point angle bits perform better than 118° point angle bits on hard materials and produce smaller chips to reduce clogging. They also have a split point that keeps the bit centered without a pilot hole.

Fractional Size—Jobbers' Length

Drill Bit Size	O'all Lg.	Drilling Depth	135° Point Angle	Each	118° Point Angle	Each

Fractional Size Drill Bit Sets—Jobbers' Length

Sets include the 118° point angle fractional size bits above. Come in a metal case.

Drill Bit Size Range	No. of Bits		Per Set
1/8"-1/2" (increments of 1/32")	13	2940A61	$256.12
1/8"-1/4" (increments of 1/64")	9	2940A62	133.10

Also Available: Wire gauge, letter, and metric sizes. Please specify exact size within the range listed.

Drill Bit Size Range	Point Angle	Style	
32-1	135°	Jobbers' Length	31575A71
40-1	118°	Jobbers' Length	2940A81
A-Z	118°	Jobbers' Length	2940A82
A-Z	135°	Jobbers' Length	31575A72
3.5-14.0 mm	118°	Short Length	28805A401

For information about drill bits and decimal equivalents, see pages 2428-2429.

Super Duty Carbide Jobbers' Drill Bits

Made from a solid piece of carbide, these bits are harder and more wear resistant than our other jobbers' bits. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications. All have a 118° point angle with a four-facet point (unless noted) that keeps the bit centered without a pilot hole.

Uncoated (bright finish) bits are for use on soft metals such as aluminum and copper as well as soft plastics. ***Long-life TiN (titanium nitride) coated*** bits last longer than uncoated bits. For use on steel, stainless steel, cast iron, aluminum, copper, nickel alloys, and titanium. ***Super-life TiAlN (titanium aluminum nitride) coated*** bits last longer than TiN-coated bits. For use on steel, stainless steel, cast iron, aluminum, copper, nickel alloys, and titanium.

Also Available: Wire gauge sizes with a long-life TiN coating or super-life TiAlN coating. For long-life TiN-coated sizes 56-1, please ask for 8825A61 and specify size. For super-life TiAlN-coated sizes 30-1, please ask for 8879A91 and specify size.

Fractional Size

To Order: For coated bits, please specify coating: long-life TiN or super-life TiAlN.

Ultra Duty Carbide Drill Bits for Tool Steel and Dies

Four straight cutting edges and a carbide body give these bits the strength to drill steel with a Rockwell hardness up to C70 such as tool steel and dies. All have an uncoated (bright finish) carbide body with a steel shank and a 120° point angle. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Also Available: Wire gauge sizes 50 to 1. Please ask for 8839A95 and specify exact size.

For information about drill bits and decimal equivalents, see pages 2428-2429.

Straight-Flute Carbide-Tipped Drill Bits for Hard Steel

The 118° notched point and straight flutes on these carbide-tipped bits withstand the heavy feed pressure necessary to penetrate hard steel with a Rockwell hardness between C45 and C60. Bits also produce a smooth finish.

Also Available: Metric sizes 5 to 14 mm. Please ask for 2973A61 and specify size.

Straight-Flute Carbide Short-Length Drill Bits for Hard Steel

The best choice for drilling hard steel, these solid carbide bits are shorter than jobbers' length bits for maximum rigidity and have straight flutes to withstand the heavy feed pressure necessary to drill hard steel (hardness of Rockwell C50 and higher), stainless steel, and high-temperature alloys. Bits have two flutes and a 135° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling operations. TiN (titanium nitride) coated bits last longer and resist heat and friction for cleaner holes than uncoated (bright finish) bits.

Also Available: Uncoated (bright finish) letter sizes A to Z. Please ask for 8944A669 and specify size.

High-Performance Carbide Jobbers' Drill Bits for Aluminum

The specially designed cutting edge, heavy duty chip-clearing flutes (also known as parabolic flutes), and 130° point angle on these solid carbide drill bits make them ideal for drilling all types of aluminum. They are also for use on copper and bronze. ***TiN (titanium nitride) coated*** bits last longer than uncoated (bright finish) bits.

Also Available: Wire gauge sizes 30 to 1. Please ask for 8822A91 for uncoated or 8822A92 for TiN-coated and specify size.

For information about drill bits and decimal equivalents, see pages 2428-2429.

High-Speed Steel Jobbers' Drill Bits for Stainless Steel

Made of powdered steel with an ultra-life TiN/TiAlN coating for long life and resistance to heat, these bits are tough enough to drill all types of stainless steel as well as nickel alloys and tool steel. They have a heavy duty chip-clearing flute design (also known as parabolic flute) and a 130° point angle with a split point that keeps the bit centered without a pilot hole.

High-Speed Steel Jobbers' Drill Bits for Plastic

A sharp 60° point angle eliminates edge chipping and chip wrapping when drilling plastic. For use on hard plastics such as cast acrylic, nylon, PVC, vinyl, and melamine and soft plastics such as ABS, polyethylene, and polypropylene. All bits have a black-oxide treatment, unless noted.

● Has a black-and-gold-oxide treatment. ★ Has a 1/4" shank diameter. ■ Has a 1/2" shank diameter.

Fractional Size Drill Bit Set—7 Pieces

Includes one each of the following bit sizes: 1/8", 3/16", 1/4", 5/16", 3/8", 7/16", and 1/2". Overall lengths differ from those listed above by approximately 1/8". Comes in a metal case.

27465A94 ..... **Per Set** $56.75

Also Available: Wire gauge, letter, and metric sizes. Please specify exact size within the range listed.

Drill Bit Size Range	
Wire Gauge Nos. 31-1	27465A31
A-Z	27465A21
3-17.5 mm	27465A41

Carbide-Tipped Drill Bits for Glass and Ceramics

Here's a smooth solution to the tricky job of drilling through glass, ceramics, and other nonmetals. Bit sizes 1/8"-1/2" require a coolant such as water. All are steel with a carbide-tipped spear point.

Drill Bit Size	O'all Lg.	Shank Dia.		Each

For information about drill bits and decimal equivalents, see pages 2428-2429.

Carbide Jobbers' Drill Bits for Fiber-Reinforced Composites

Also known as brad-point drill bits, these have three drill points that make a clean hole in fiber-reinforced composites without fraying or delaminating the material. Bits are made of uncoated (bright finish) solid carbide and stay centered without a pilot hole. Also for use on wood; soft plastics such as polyethylene, polypropylene, and ABS; fiberglass; and carbon fiber. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Also Available: Wire gauge sizes 60 to 1 and letter sizes A to Z. For wire gauge sizes, please ask for 2828A84 and specify size. For letter sizes, please ask for 2828A81 and specify size.

Carbide Jobbers' Drill Bits for Composites

Made of solid carbide with a diamond coating, these bits are wear resistant and last longer than other drill bits when drilling abrasive composites such as plastic, carbon fiber, graphite, and fiberglass. Also for use on copper, brass, and aluminum. Bits have a 118° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Drill Bit Size	O'all Lg.	Drilling Depth		Each
1/16"	1 1/2"	0.6"	3162A11	$28.50

Carbide Short-Length Drill Bits for Composites

Shorter than our Carbide Jobbers' Drill Bits for Composites, these have maximum rigidity to drill straighter, shallower holes than jobbers' bits. For use on carbon fiber, graphite, and fiberglass as well as copper, brass, aluminum, and plastic. Also known as screw-machine and stub-length bits, they are made of solid carbide with a diamond coating. All have a 118° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

High-Speed Steel Drill Bits for Sheet Metal

Single End

Double End

Also known as body drills, these bits are short and sturdy for all of your sheet metal drilling needs. They are also for use on thin-wall tubing and for general shallow-hole drilling. All are high-speed steel with a black-oxide treatment. They have a 135° point angle with a split point that keeps the bit centered without a pilot hole. Full package quantity is 12. ***Double-end*** bits can be turned around if one end becomes worn.

Carbide Spade Drill Bits for Sheet Metal

A combination of two flat flutes and a short length prevent pulling and breakage when drilling thin sheets of steel and stainless steel. All bits are made of solid carbide and have a 118° point angle. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

For information about drill bits and decimal equivalents, see pages 2428-2429.

Hole-Starting Drill Bits

120° Point Angle

With a short flute and a short overall length, these bits stay straight to give you accurate placement when starting holes that will be drilled deeper with a longer bit. Also known as spotting bits, all are uncoated (bright finish). ***Cobalt steel*** bits are heat resistant for drilling stainless steel, nickel alloys, and titanium. ***Carbide*** bits are more rigid and maintain their sharp edges longer than cobalt bits. For use on cast iron, aluminum, brass, bronze, fiberglass, plastic, and graphite.

90° point angle bits are for centering and chamfering holes that will be followed by a smaller drill bit size. ***120° point angle*** bits are for starting a hole that will be followed by a drill bit with a point angle from 90°–118°. ***140° point angle*** bits are for starting a hole that will be followed by a drill bit with a point angle from 118°–135°.

Left-Hand (Reverse Flute) Drill Bits

Commonly used for drilling into broken screws, these bits have flutes that spiral in the opposite direction of other bits and are for use in reverse tool operation only. Bits are uncoated (bright finish), except the 88055A series, which have a black-and-gold oxide treatment. All have a 135° point angle with a split point that keeps the bit centered without a pilot hole, unless otherwise stated. ***Jobbers' length high-speed steel*** bits are for use on steel, cast iron, and plastic, unless otherwise stated. ***Maintenance-length cobalt steel*** bits provide more heat resistance and rigidity and drill shallower holes than jobbers' length high-speed steel bits. For use on stainless steel, nickel alloys, and titanium alloys.

Also Available: High-speed steel fractional sizes 1/32″ to 1/2″, wire gauge sizes 60 to 1, and metric sizes 1 to 12 mm. All have a 118° point angle and are uncoated (bright finish) except metric sizes larger than 2.5 mm, which have a black-oxide treatment. For fractional sizes, please ask for 2876A61 and specify size. For wire gauge sizes, please ask for 3024A41 and specify size. For metric sizes, please ask for 29855A91 and specify size.

Fractional and Wire Gauge Size Drill Bit Sets—Jobbers' Length, High-Speed Steel

Come in a metal case with folding panels that are marked with the drill bit sizes. All have a 118° point angle and are for use on carbon steel, alloy steel, and cast iron.

Drill Bit Size Range	No. of Pieces		Per Set
1/16″-1/2″ (increments of 1/64″)	29	29505A51	$305.37
Wire Gauge Nos. 60-1	60	29505A71	187.82

High-Speed Steel Maintenance-Length Drill Bits

Shorter than jobbers' length drill bits for better rigidity; longer than short-length drill bits for extra depth. All are high-speed steel with a black-and-gold-oxide treatment that adds wear resistance and improves coolant flow. Three flats on the drill bit shank provide a secure grip to eliminate slipping in the drill chuck. Drill bits have a 135° point angle with a split point that keeps the bit centered without a pilot hole. For use on steel, stainless steel, cast iron, aluminum, brass, copper, and plastic.

For information about drill bits and decimal equivalents, see pages 2428-2429.

High-Speed Steel Short-Length Drill Bits

Maximum rigidity and a shorter overall length make these bits better for drilling straighter, shallower holes than jobbers' and maintenance-length bits. Also known as screw-machine and stub-length bits. ***Drill bit sets*** come in a metal case.

135° Point Angle—Better for hard materials than 118° point angle bits. All have a split point that keeps the bit centered without a pilot hole, except size 3/64″ and wire gauge sizes 60-53. *Black-oxide* bits are more wear resistant than uncoated bits and are for use on steel and cast iron. *Long-life TiN (titanium nitride) coated* bits last longer than black-oxide bits and are for use on steel, stainless steel, aluminum, brass, nickel alloys, and plastic.

118° Point Angle—*Uncoated (bright finish)* bits are for use on steel, cast iron, and plastic. *Black-oxide* bits are more wear resistant than uncoated bits and are for use on steel and cast iron. *Long-life TiN (titanium nitride) coated* bits last longer than uncoated bits and are for use on steel, aluminum, brass, bronze, plastic, and composites.

Super Duty Carbide Short-Length Drill Bits

More wear resistant than high-speed steel with a shorter length for better rigidity and shallower drilling than jobbers' bits. Also known as screw-machine and stub-length drill bits, all have a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications. ***Uncoated (bright finish)*** bits are for use on aluminum, copper, and soft plastic. ***Long-life TiN (titanium nitride) coated*** bits last longer than uncoated bits. For use on steel, stainless steel, cast iron, aluminum, copper, nickel alloys, and titanium. ***Super-life TiAlN (titanium aluminum nitride) coated*** bits last longer than TiN-coated bits. For use on most metals such as steel, stainless steel, cast iron, aluminum, copper, nickel alloys, and titanium.

Ultra Duty Carbide Short-Length Drill Bits

Stronger than our Super Duty Carbide Short-Length Drill Bits, these are for use on hard steel with a Rockwell hardness up to C65 as well as titanium, nickel alloys, stainless steel, and cast iron. All have a long-life TiN (titanium nitride) coating and a 140° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling operations.

For information about drill bits and decimal equivalents, see pages 2428-2429.

Heat-Resistant Cobalt Steel Short-Length Drill Bits

A combination of cobalt steel and a short overall length keeps these bits sharp at high temperatures while providing rigidity for drilling straight, shallow holes. Also known as stub-length and screw-machine length bits. For use on alloy and tool steels, stainless steel, nickel alloys, and hard plastic. All have a 135° point angle that produces small chips to reduce clogging. They also have a split point that keeps the bit centered without a pilot hole. ***Long-life TiN (titanium nitride) coated*** bits last longer than uncoated (bright finish) bits.

Fractional, Wire Gauge, and Letter Size Drill Bit Sets—Uncoated (Bright Finish)

All sets come in a metal case.

Drill Bit Size Range	No. of Pieces		Per Set
1/16"-1/2" (increments of 1/64")	29	3148A68	$191.46
1/16"-1/2" (increments of 1/32")	15	3148A62	108.18
Wire Gauge Nos. 60-1	60	3148A72	$139.53
A-Z	26	3148A76	206.12

For information about drill bits and decimal equivalents, see pages 2428-2429.

Extended-Reach Drill Bits

Reach recessed locations and drill deep holes—these bits have longer flutes and a longer overall length than jobbers' length and maintenance-length bits.

High-Speed Steel— All have a 118° point angle. *Uncoated (bright finish)* bits are for use on steel, stainless steel, aluminum, copper, brass, and bronze. *Black-oxide* bits are for use on steel, cast iron, and plastic. *TiN (titanium nitride) coated* bits last longer than uncoated (bright finish) and black-oxide bits. For use on steel, cast iron, copper, brass, and bronze.

Cobalt Steel— All are uncoated (bright finish) and have a 135° point angle with a split point that keeps bits centered without a pilot hole. For use on steel, stainless steel, nickel alloys, and titanium.

Also Available: Carbide-tipped steel fractional sizes 1/8″ to 1″ with a 118° point angle (please ask for 29465A75 and specify size); cobalt steel wire gauge sizes 40 to 1 with a 135° point angle (please ask for 88555A91 and specify size); and uncoated (bright finish) high-speed steel metric sizes 1 to 16 mm with a 118° point angle (please ask for 3083A3 and specify size).

(Continued on following page)

For information about drill bits and decimal equivalents, see pages 2428-2429.

Extended-Reach Drill Bits *(Continued from previous page)*

Reach recessed locations and drill deep holes—these bits have longer flutes and a longer overall length than jobbers' length and maintenance-length bits.

High-Speed Steel— All have a 118° point angle. *Uncoated (bright finish)* bits are for use on steel, stainless steel, aluminum, copper, brass, and bronze. *Black-oxide* bits are for use on steel, cast iron, and plastic. *TiN (titanium nitride) coated* bits last longer than uncoated (bright finish) and black-oxide bits. For use on steel, cast iron, copper, brass, and bronze.

Cobalt Steel— All are uncoated (bright finish) and have a 135° point angle with a split point that keeps bits centered without a pilot hole. For use on steel, stainless steel, nickel alloys, and titanium.

Also Available: Carbide-tipped steel fractional sizes 1/8″ to 1″ with a 118° point angle (please ask for 29465A75 and specify size); cobalt steel wire gauge sizes 40 to 1 with a 135° point angle (please ask for 88555A91 and specify size); and uncoated (bright finish) high-speed steel metric sizes 1 to 16 mm with a 118° point angle (please ask for 3083A3 and specify size).

● Have a bright finish.

Chip-Clearing High-Speed Steel Extended-Reach Drill Bits

Long, wide flutes and a long overall length allow you to drill deep holes in hard-to-reach areas without worrying about clogs. For use on steel, stainless steel, aluminum, and plastic. All are uncoated (bright finish) high-speed steel and have a 135° point angle with a split point that keeps the bit centered without a pilot hole.

For information about drill bits and decimal equivalents, see pages 2428-2429.

Short-Flute Extended-Reach Drill Bits

A long overall length allows you to reach deep, inaccessible spots while a short flute maximizes rigidity for drilling straighter holes. All bits meet NAS 907 aerospace standards and have a 135° point angle with a split point that keeps the bit centered without a pilot hole (unless noted).

High-speed steel bits are for use on steel, stainless steel, and cast iron. They have a black-oxide treatment. ***Cobalt steel*** bits provide better heat and abrasion resistance than high-speed steel. For use on stainless steel, cast iron, and nickel alloys. They have a bright finish. ***Carbide-tipped*** bits provide better wear resistance when drilling materials such as cast iron, brass, bronze, hard plastic, fiberglass, and graphite.

High-Speed Steel Multidiameter Step Drill Bits

Each bit has cutting steps with progressively larger diameters for drilling a range of hole sizes in thin materials. All bits are high-speed steel and stay centered without a pilot hole, unless noted. ***Uncoated (bright finish)*** bits are for use on steel, aluminum, brass, bronze, and plastic. ***Long-Life TiN (titanium nitride) coated*** bits last longer than uncoated (bright finish) bits. They are for use on steel, stainless steel, nickel alloys, and titanium.

Multidiameter Step Drill Bit Sets

Uncoated (Bright Finish)—Come in a fitted case. *Set with 1/8″-3/4″ bits* contains one drill bit in each of the following size ranges: 1/8″-1/2″, 3/16″-1/2″, and 1/4″-3/4″. *Set with 1/8″-1 3/8″ bits* contains one drill bit in each of the following size ranges: 1/8″-1/2″, 3/16″-1/2″, 3/16″-7/8″, and 13/16″-1 3/8″.

Long-Life TiN-Coated—Comes in a nylon pouch. Contains one drill bit in each of the following size ranges: 1/8″-1/2″, 3/16″-1/2″, and 1/4″-3/4″.

Drill Bit Size Range	No. of Bits		Per Set
Uncoated (Bright Finish)			
1/8″-3/4″	3	8841A32	$67.38
1/8″-1 3/8″	4	8841A36	151.85
Long-Life TiN Coated			
1/8″-3/4″	3	89315A48	87.98

For information about drill bits and decimal equivalents, see pages 2428-2429.

Chamfering, Counterboring, and Countersinking Drill Bits

Style 1

Style 2

Style 3

With a point that matches the profile of common fasteners, these bits save time by chamfering, counterboring, or countersinking the hole as they drill. When you're done drilling, tap the hole and install your fastener. Each bit produces a range of hole diameters. They are uncoated (bright finish) high-speed steel with a 118° point angle. For use on carbon steel, alloy steel, and cast iron.

Styles 1 and 2—Also known as subland drill bits, these last longer than Style 3 bits because their diameters will not change, even after sharpening.

Style 1 is for drilling and chamfering holes (creating a beveled edge around the top of the hole) prior to tapping. The body has a large diameter and produces a 90° countersink angle that guides the tap. Percent of thread refers to the amount of thread engagement between interlocking threads. *Style 2* is for drilling and counterboring holes for socket head cap screws.

Style 3—Also known as step drill bits. Choose from bits for drilling and counterboring socket head cap screw holes and bits for drilling and countersinking 82° flat head machine screw holes. *Note:* After multiple sharpenings, the drill bit diameter may become smaller.

Style 1—Chamfering Bits

1/4″ and 3/8″ Diameter Reduced-Shank Drill Bits

1/4″ Shank Diameter

When you need to drill a large hole, but your chuck only accepts 1/4″ or 3/8″ shank diameter bits, these bits come to the rescue. The shank diameter of these bits is smaller than the drill bit size. For use in steel, stainless steel, aluminum, brass, and plastic. Bits with a 135° point angle have a split point that keeps the bit centered without a pilot hole. ***1/4″ shank diameter*** bits are uncoated (bright finish) high-speed steel with black-oxide treated flutes. They are about 20% shorter than jobbers' bits, unless noted. ***3/8″ shank diameter*** bits are black-oxide high-speed steel for more wear resistance than uncoated (bright finish) bits. They are the same length as jobbers' bits. ***Drill bit sets*** come in a metal case. All are uncoated (bright finish) unless noted.

1/4″ Shank Diameter—118° Point Angle

♠ Sizes 1/16″-1/4″ are jobbers' length. Sizes 17/64″-1/2″ have black-oxide flutes.

1/2″ Diameter Reduced-Shank TiN-Coated Cobalt Steel Drill Bits

Protect against heat and abrasion with these long-life TiN-coated cobalt steel drill bits. Also known as Silver and Deming bits, the 1/2″ dia. shank allows you to drill large holes using a tool or machine with a 1/2″ or 3/4″ chuck. The shank dia. is smaller than the drill bit size. All have a 118° angle with a split point that keeps the bit centered without a pilot hole. Drilling depth is 3 1/8″. For use on steel and cast iron.

For information about drill bits and decimal equivalents, see pages 2428-2429.

1/2″ Diameter Reduced-Shank Drill Bits

Also known as Silver and Deming bits, these have a 1/2″ diameter shank that allows you to drill large holes using a tool or machine with a 1/2″ or 3/4″ chuck. The shank diameter is smaller than the drill bit size. Overall length is 6″ and drilling depth is 2.1″. ***Slip-resistant shank*** bits have three flats to prevent the bit from slipping in the chuck.

135° Point Angle— A split point keeps the bit centered without a pilot hole. *Black-oxide high-speed steel* bits are for use on steel, cast iron, brass, bronze, and plastic. ***118° Point Angle—****Black-oxide high-speed steel* bits are for use on steel and cast iron. *Long-life TiN (titanium nitride) coated high-speed steel* bits last longer than black-oxide high-speed steel bits and are for use on steel, aluminum, brass, bronze, nickel alloys, and plastic. *Uncoated (bright finish) cobalt steel* bits perform better than high-speed steel bits on hard metals. Use on carbon and alloy steel, stainless steel, ductile iron, nickel alloys, titanium, and fiberglass. *Carbide-tipped* bits resist wear better than high-speed steel and cobalt steel bits. Use on cast iron, brass, bronze, and plastic.

For information about drill bits and decimal equivalents, see pages 2428-2429.

Extended-Reach 1/2″ Diameter Reduced-Shank Drill Bits

Drill deep, large holes using toolholders that accept a 1/2″ diameter bit—the shank diameter on these bits is smaller than the drill bit size. For use on cast iron and steel. Drill bits are black-oxide high-speed steel with a 118° point angle. Overall length is 12″ and drilling depth is 9″.

Also Available: Bits with an 18″ overall length and 12″ drilling depth. Please ask for 2464A71 and specify size.

Hole-Enlarging 1/2″ Diameter Reduced-Shank Drill Bits

Enlarge an existing hole using your 1/2″ capacity toolholder (unless noted) without altering the hole depth. These bits have four flutes for precise hole enlarging and a slip-resistant shank. All are tool steel with a black-and-gold-oxide treatment for use on steel, stainless steel, cast iron, nickel alloys, aluminum, brass, titanium, and plastic. Bit length is 4 5/16″ and drilling depth is 1 3/4″.

Drill Bit Size	Min. Starting Hole Size		Each	Drill Bit Size	Min. Starting Hole Size		Each

● Shank dia. is 3/8″.

8-Piece Hole-Enlarging Drill Bit Set—Includes hole-enlarging drill bit sizes 3/8″, 1/2″, 5/8″, and 3/4″. Also includes 1/4″, 5/16″, 25/64″, and 15/32″ hole-starting bits with a 135° point angle. Comes in a metal case.

30455A71 ..... **Per Set** $123.82

3/4″ Diameter Reduced-Shank Drill Bits

Our largest drill bit sizes have a 3/4″ shank diameter for use in your 3/4″ capacity or larger toolholder. Overall length is 6″ and drilling depth is 2.1″.

High-speed steel bits are uncoated (bright finish) with black-oxide treated flutes and a 118° point angle. For use on steel, stainless steel, cast iron, aluminum, brass, and plastic. ***Cobalt steel*** bits stay sharp at the high temperatures generated when drilling stainless steel, nickel alloys, and titanium alloys. They are uncoated (bright finish) and have a 135° point angle with a split point that keeps the bit centered without a pilot hole.

Micro-Size Drill Bits

The smallest of our drill bit sizes, these bits are for drilling extremely small holes. They are uncoated (bright finish) and have a 118° point angle.

High-speed steel bits are for use on steel, cast iron, aluminum, brass, and bronze. The shank diameter is the same as the drill bit size.

Cobalt steel bits maintain a sharp edge at the high temperatures generated when drilling stainless steel and titanium. Also for use on steel, aluminum, copper, brass, and plastic. These bits have a 0.0394″ (1 mm) shank diameter.

For information about drill bits and decimal equivalents, see pages 2428-2429.

Carbide Small-Diameter Drill Bits with 1/8″ Shank

A 1/8″ shank diameter allows for fast changes between small drill bit sizes—eliminating the need for different collets to hold each bit size. All bits are made of uncoated (bright finish) solid carbide for use on steel, stainless steel, aluminum, brass, fiberglass, and plastic. They have a 130° point angle.

Fractional Size

Drill Bit Size	O'all Lg.	Drilling Depth		Each
1/64″	1 1/2″	0.27″	2841A91	$6.95
1/32″	1 1/2″	0.39″	2841A92	4.51

1/8″	1 1/2″	0.41″	2841A98	5.60

Wire Gauge Size

To Order: Please specify exact size within the range listed.

Drill Bit Size Range	O'all Lg.	Drilling Depth		Each
80-79	1 1/2″	0.27″	2841A25	$6.95
78-77	1 1/2″	0.27″	2841A28	6.28
76-73	1 1/2″	0.33″	2841A24	4.98
72-52	1 1/2″	0.39″	2841A23	4.51
51-31	1 1/2″	0.41″	2841A21	5.60

Taper-Shank Drill Bits

The Morse taper shank on these bits fits directly into the tapered spindle hole of machines such as drill presses as well as Morse taper size adapters (also known as sleeves and sockets; see Morse Taper Size Adapters on page 2427). ***Black-oxide high-speed steel*** bits have a 118° point angle. For use on steel, cast iron, and plastic. ***Cobalt steel*** bits offer more heat resistance than high-speed steel. They are uncoated (bright finish) and have a 135° point angle with a split point that stays centered without a pilot hole.

Also Available: Black-oxide high-speed steel metric size bits with a 118° point angle. Please ask for 3070A41 and specify size.

High-Speed Steel Hex-Shank Drill Bits

Slide these high-speed steel bits into your power screwdriver and other holders and drivers that accept a 1/4″ hex shank. All bits have a black-oxide treatment and a 130° point angle, except sizes 1/16″ and 3/32″, which have a 118° point angle. For use on steel, cast iron, aluminum, brass, copper, and plastic, unless noted.

Drill Bit Size	O'all Lg.	Drilling Depth		Each
1/16″	2 1/4″	0.18″	29305A11 ♠	$3.63

1/2″	4″	2″	29305A44	19.50

♠ Not rated for use with impact drivers. For use on steel and wood only.

7-Piece Drill Bit Set—Includes two each of size 1/8″ and one each of sizes 5/32″, 3/16″, 7/32″, 1/4″, and 5/16″.

29305A61 ..... **Per Set** $31.55

Cases and Stands for Drill Bits

Organize your individual drill bits in these compact cases and stands. They have one hole for each bit size listed. Holes are marked with the size and decimal equivalent, unless noted. All are made of steel, except 2961A61, which is made of high-impact plastic and is waterproof.

Drawer Cabinets for Drill Bits

Keep multiple drill bits of each size in order. Drill bit sizes and decimal equivalents are permanently marked on the drawers, unless noted. All cabinets are made of steel. ***Combination cabinets*** have a built-in lock with two keys. The bottom drawer is undivided for general storage. Stack up to three high. ***Standard cabinets*** can be stacked up to three high. *Fractional size 1/2″ reduced-shank diameter drill bit cabinets* hold two of each drill bit size. ***Undermount cabinets*** mount underneath a workbench or shelf with 1/4″ screws (not included). They have a built-in lock with two keys.

Threaded-Shank Drill Bits

All bits have a 1/4″-28 threaded shank and with a 135° point angle with a split point that keeps the bit centered without a pilot hole. Bits are black-oxide high-speed steel. Use on steel, stainless steel, cast iron, aluminum, brass, and bronze. Meet NAS (National Aerospace Standard) 965, Type B.

Diamond-Core Drill Bits for Masonry

Diamond particles attached to the hollow steel barrel provide fast cutting. Use for wet drilling of concrete and masonry as well as light to moderate amounts of steel reinforcing bar (rebar). Bits are 15 1/2″ long and have a drilling depth of 13″. Bit ID is approximately 1/4″ less than the OD. *Note:* Not suitable for dry drilling. Not for use with portable electric drills or grinders.

1″-1 1/2″ bits have 5/8″-11 threaded hubs. Add an optional thread adapter (sold separately) and use in drilling rigs (see 3165A31 on this page). *1 3/4″ and larger bits* have 1 1/4″-7 threaded hubs.

Bit OD		Each	Bit OD		Each
1″	2872A51	$88.80	3″	2872A57★	$173.68

2 3/4″	2872A35	186.00	12″	2872A23	710.88

★ Overall length is 16 1/2″ and drilling depth is 14″.

Optional thread adapter lets you use core drill bits with 5/8″-11 threaded hubs on drilling rigs that have a 1 1/4″-7 threaded spindle. Overall length, including threads, is 5 3/8″.

2872A99 ..... **Each** $101.25

Hollow Drill Bits for Paper and Fabric

Razor-sharp cutting edges quickly cut through paper, fabric, and other soft materials. All bits are steel and have a 11/16″ shank diameter and a 3 1/8″ overall length.

These are standard Style A bits for use with Casco, Challenge, Climax, Lassco, Ottawa, and Super Speed paper-drilling machines.

Drill Bit Size	Max. Material Thickness		Each
1/8″	1″	3164A21	$31.25

Drill Press Diamond-Core Drill Bits for Glass and Nonmetallic Materials

Hard, abrasive nonmetallic materials such as glass, alumina, quartz, ruby, and silica are no match for these bits. An adapter (sold separately below) is required for use. Bits are 2″ long with a 1/4″ of 100-grit diamonds.

Recommended operating speed is 1,800-2,400 rpm for OD sizes up to 1/2″ and 1,250-1,800 rpm for OD sizes 9/16″-1 1/4″. Recommended coolant is plain water.

Also Available: Other sizes from 7/64″ to 5″ OD in 1/64″ increments. Please ask for 2868A999 and specify bit OD.

1/2″	2868A11	134.77

Milwaukee Diamond-Core Drilling Rig

Roll this portable drill to where you need it and cut holes up to 10″ diameter in masonry, reinforced concrete, tile, marble, and natural stone. Drilling rig and motor are sold separately.

Drilling Rig— Has a rack-and-pinion feed mechanism and feed wheel that mounts on either side of the column. The column is 43 1/2″ high and it can be set at any angle up to 45° for 28″ of smooth and precise drill alignment. The base is cast aluminum and has two rubber wheels and a mounting slot to secure it to the floor or wall.

Rig includes a bubble level and vacuum base. The 1/3 hp, 115 VAC vacuum base provides 1,800 lbs. of holding force. Rig also has a 360° adjustable, 30 amp, 120 VAC meter box that indicates proper drilling pressure and speed. Power cord is 6-ft. long with a three-prong plug. Overall height is 47″; weight is 106 lbs.

Motor— Has triple gear reduction and a clutch to protect against overload. A built-in water swivel and adapter accepts a standard water hose and water control valve. Spindle thread size is 1 1/4″-7. Comes with a 2-ft. long power cord with NEMA L5-20P twist-lock plug. Operates on 120 VAC, 60 Hz, 20 amps. No load rpm is 450/900. Weight is 24 lbs.

Optional Spacer Assembly— Increases core bit OD capacity from 10″ to 14″.

		Each
Drilling Rig (Milwaukee No. 4136)	3165A31	$1,765.00
Motor (Milwaukee No. 4096)	3165A32	812.50
Optional Spacer Assembly	3165A33	89.00

About Masonry Drill Bits

Bits have alloy steel bodies with carbide tips that can be resharpened. Bits are made to ANSI standards (where applicable).

Hammer Drilling Bits

Also called percussion or impact bits, these bits drill holes using simultaneous rotary and hammering action to break masonry materials, such as concrete, into tiny granules. This dual action allows bits to drill faster and penetrate materials with less pressure than drilling-only bits. These bits can be used with hammer drills or rotary hammers. If you need a shank adapter, see our 89385A series on page 2460.

Drilling-Only Bits

These bits drill holes using rotary action. They don't break up masonry materials like hammer drilling bits, but they do grind it up when you apply pressure. Use these bits with portable electric drills, cordless drills, and hammer drills (rotary-mode only).

Drill Bit Shank Styles

How to Avoid Premature Bit Failure

1. Do not let bit come into contact with embedded rebar (reinforcing bar). If you do encounter rebar, move the hole or switch to a rebar cutting bit, such as our 28655A series on page 2461.
2. Frequently withdraw the bit from the hole to clean out dust to lessen the chance of the drill bit binding in the hole.
3. Keep the bit's shank clean and lubricated.
4. Do not pour water into the hole while drilling. The extreme change in temperature may cause the bit's carbide tip to fail.

Spline-Shank Masonry Drill Bits for Rotary Hammers

The shank has 12 splines to keep an optimum fit between the bit and the bit holder during the heavy impact produced by a spline-drive rotary hammer. Shank is 3/4" dia. ***Multi-point*** bits have five carbide cutters in the tip, resulting in less vibration, smoother and rounder holes, faster drilling, and longer bit life.

Tapered Round-Shank Masonry Drill Bits for Rotary Hammers

Also known as A-taper bits, they fit all rotary hammers with a taper-shank chuck. An adapter (sold separately) is required for use in spline-drive and SDS-Plus drive rotary hammers.

Adapters are made of steel and include a bit removal tool (also called a drift pin).

Spline-Shank Adapter for Spline-Drive Rotary Hammers	2813A47	52.47
SDS-Plus Shank Adapter for SDS-Plus Drive Rotary Hammers	2813A53	41.09

For information about masonry drill bits, see page 2458.

SDS-Shank Masonry Drill Bits for Rotary Hammers

Designed to withstand the heavy blows from a rotary hammer.

SDS-Plus shank drill bits have two deep slots and two shallow slots on the shank for additional hold in your rotary hammer. Shank dia. is 0.393″. Use with an SDS-Plus drive rotary hammer and Hilti brand rotary hammer models TE-1 through TE-25.

SDS-Max shank drill bits have five slots on the shank—three deep slots for driving the bit in a rotary motion and two shallow slots for keeping a secure hold in the rotary hammer. This design adds strength and maximizes impact at the drill tip while minimizing wobble and vibration. Bits 5/8″ dia. and larger have five cutting edges rather than two, which enhances hole accuracy. Shank dia. is 0.708″. Use with an SDS-Max drive rotary hammer and Hilti brand rotary hammer models TE-50 through TE-94. Cannot be used with an SDS-Plus drive rotary hammer.

SDS-Max shank core bits have a one-piece design that provides power at impact. Multiple carbide tips cut on the outside edge for easier drilling of larger holes. Shank dia. is 0.708″. A pilot drill and ejector key are included. Use with an SDS-Max drive rotary hammer. Cannot be used with an SDS-Plus drive rotary hammer.

Chisels with Spline, SDS-Plus, and SDS-Max Shanks for Rotary Hammers

Flat

Bull Point

Scaling

Bushing Tool

Slotting

Seam

Chisels with spline shank have a combination 5/8″ dia. round and 3/4″ hex shank that works with all spline-drive rotary hammers.
Chisels with SDS-Plus shank have a 0.393″ dia. shank and work only in SDS-Plus rotary hammers.
Chisels with SDS-Max shank have a 0.708″ dia. shank and work only in SDS-Max rotary hammers.

For information about masonry drill bits, see page 2458.

Shank Adapters for Rotary Hammers

89385A31

89385A32

89385A34

Quick-change adapters let you use a bit with a different shank style in your rotary hammer. Made of steel.

For Rotary Hammer Style	For Bit Style	O'all Lg.		
Spline Drive	SDS-Plus Shank	8″	89385A31	$66.73
SDS-Max Drive and Hilti Rotary Hammers	SDS-Plus Shank	8″	89385A32	76.63
SDS-Max Drive and Hilti Rotary Hammers	Spline Shank	10¾″	89385A34	105.40

Three-Piece Large-Hole Masonry Drill Bits for Rotary Hammers

Complete Core Bit

Because they cut only on their outside edge, these bits are effective for drilling holes from 1″ to 5″ in diameter in demanding applications.

A complete core bit consists of a core-bit body, a drive adapter, and a pilot drill (each sold separately). Each component is made of alloy steel and has ¾″-10 threads for easy assembly and replacement of individual parts. Drilling depth is achieved in 4″ increments.

Core-bit bodies have carbide tips.

Spline-shank drive adapter fits all spline-drive rotary hammers.

SDS-Max shank drive adapter fits all SDS-Max shank rotary hammers.

Pilot drill has a carbide tip to make starting a hole easier.

Optional drive extensions are for use with 1¼″ to 5″ dia. core-bit bodies. Made of alloy steel.

Hex- and Round-Shank Masonry Drill Bits for Hammer Drills

Standard Hex Shank

Premium Round Shank

Use in hammer drills that have a three-jaw drill chuck.

Standard hex-shank bits are for use in concrete and masonry.

Premium round-shank bits penetrate faster than standard hex-shank bits. In addition to concrete and masonry, you can also use them on marble, granite, tile, hard metals, and plastics. Bits have serrations on the edges of the tips for faster, cooler cutting and longer life. Bits with shank diameters ⅜″ and larger have three flats on the shank for more secure gripping. *Note:* Bits should be used in a drill press when drilling hard metals.

5-Piece Premium Round-Shank Drill Bit Set—Includes one each of sizes (bit size×drilling depth) 3/16″×4½″, ¼″×3¾″, 5/16″×4″, ⅜″×4″, and ½″×4″. Comes in a plastic case.

2899A51 ..... $56.42

For information about masonry drill bits, see page 2458.

Round-Shank Masonry Drill Bits for Portable Drills

Designed for nonhammer drilling.
Slow spiral bits are better than fast spiral bits for drilling concrete.
Fast spiral bits are for more brittle, soft to medium materials such as block and brick.

▲Flute length is 4". Drill in 4" increments to achieve drilling depth.

4-Piece Round-Shank Drill Bit Set—
Includes one each of sizes (bit size×o'all lg.) 1/4"×4", 5/16"×4", 3/8"×4", and 1/2"×6". Comes in a vinyl pouch.

Slow Spiral	2943A4	$22.69
Fast Spiral	2943A1	19.13

6-Piece Round-Shank Drill Bit Set—
Includes one each of sizes (bit size×o'all lg.) 1/4"×4", 5/16"×4", 3/8"×4", 1/2"×6", 5/8"×6", and 3/4"×6". Comes in a vinyl pouch.

Slow Spiral	2943A5	$41.76
Fast Spiral	2943A2	51.39

6-Piece Round-Shank Drill Bit Set—
Includes one each of sizes (bit size×o'all lg.) 3/16"×3", 1/4"×4", 5/16×4", 3/8"×4, 1/2"×6", and 5/8"×6". Comes in a vinyl pouch.

Slow Spiral	2943A6	$32.57
Fast Spiral	2943A3	36.96

Round-Shank Large-Hole Masonry Drill Bits for Portable Drills

Drill large holes using a portable drill. Bits are rotary only and work well on thin or brittle materials that might be damaged by the impact of rotary-hammer bits. All have a removable shank. To achieve maximum drilling depth, break up and remove the core every 4" of depth before drilling deeper.
Optional carbide-tipped pilot drill makes starting a hole easier.

Round Shank

Bit Size	Shank Dia.	Drilling Depth	O'all Lg.	Bits		Optional Extensions

Optional Carbide-Tipped Pilot Drill for Bit Sizes 1 1/2" and Larger	2942A89	20.19

Drill Bits for Concrete-Embedded Rebar

When you encounter rebar (reinforcing bar), stop drilling and mount one of these bits in your tool. Drill through the rebar and resume drilling with your masonry drill bit. *Note:* Bits are for rotary drilling only—hammer drilling will damage the bit.
Round-shank bits have three flats on the shank for a secure hold. Use with portable drills with a 1/2" chuck. Shank diameter is 5/16" for 3/8" bit size; 3/8" for 1/2"-9/16" bit sizes; and 1/2" for 5/8" and larger bit sizes.
SDS-Plus shank bits are used with SDS-Plus drive rotary hammers. Shank diameter is 0.393". Bit sizes 7/8" and larger have a removable shank.

Deep-Hole Drill Bits for Wood

Bits start easily and cut holes in construction lumber, railroad ties, and utility poles. All are made of heat-treated steel and have a screw point. Overall length includes the screw point.

Extra Long

Also called pole auger bits, these are our longest bits for deep-boring jobs. All have a single cutting edge. The hex shank can be cut off to expose a 1/2″ round shank.

Bit Size	Hex Size	Drilling Depth	O'all Lg.		
9/16″	7/16″	24″	29″	2907A31	$66.89
5/8″	7/16″	24″	29″	2907A32	68.86

1 1/16″	7/16″	24″	29″	2907A39	98.77

Regular Length

A

B

C

Break through obstructions in wood to produce a smooth hole. Bits have a single cutting edge and a hollow center. They can be resharpened.

Bits ***with tapered square shank*** are also known as pole auger bits. The tapered square shank can be cut off to expose a round shank. All have an extra-long twist.

Bits ***with quick-change hex shank*** are also known as ship auger bits.

General Purpose Drill Bits for Wood

Flat Blade

Fast Cut

An economical choice for drilling large holes in hard and soft woods, including plywood.

Flat-blade bits are also known as spade bits. They have a grooved point and extended cutting edges for fast, clean boring. Made of steel. Use with quick-change chucks and drill chucks. For holders, see 7179A series on page 2826.

Fast-cut bits have a cutting angle on the flute for fast chip removal, and a self-feed screw tip for faster cutting than flat-blade bits. Made of heat-treated steel.

5 1/2″ Length	3188A31	$16.26
12″ Length	3188A32	17.22

8-Piece Drill Bit Set—Includes bit sizes 1″, 1 1/8″, 1 1/4″, 1 1/2″, 1 3/4″, 2 1/8″, and 2 9/16″, plus a 5 1/2″ extension. Comes in a plastic case.

3188A33 ..... $178.00

Smooth-Finish Drill Bits for Wood

Bore accurate, smooth-finish holes at a wide range of angles in soft wood, thin stock veneer, and laminates. Also known as Forstner bits, they can produce partial-arc and end-grain holes, pilot holes for mortising and grooving, and perfectly finished flat-bottom holes. The rim scribes the hole while the two cutters rapidly remove the chips.

Bits with Center Guide Point—Use in portable electric tools and drill presses. The center guide point keeps the bits from wandering. Overall length includes the center guide point. *Carbide-tipped* bits outlast steel bits and can cut tough, abrasive materials such as plywood, hard wood, and solid surface materials.

Bits without Center Guide Point—Use in drill presses only.

With Center Guide Point

Without Center Guide Point

Bits with Center Guide Point for Portable Electric Tools and Drill Presses

Fast-Cutting Smooth-Finish Drill Bits for Wood

Ideal for use in a drill press, bits have multiple outlining teeth that bore clean holes without chipping and splintering your wood's surface—even when cutting across the grain. Also known as multispur bits, they are excellent for boring overlapping holes, holes on close centers, and straight boring in wood and veneered stock. Bits are heat-treated steel. The cutting edges are precision ground for quick chip removal. A center guide point prevents the bit from wandering. The overall length includes the center guide point. Bits 3 1/4″ diameter and larger have a replaceable center guide point and two cutting edges.

Drill Press Adjustable-Hole Drill Bits for Wood

Cut a variety of hole sizes with one bit by sliding the blade to the desired cutting diameter. Two adjustable cutter blades have easy-to-read markings and are securely held in position by the screw. Bits are forged steel and have three flats on the shank for extra grip. Bits require the torque and rpm of a drill press and are not recommended for use in portable electric drills. Use in standard drill chucks.

Hole Dia. Range	Blade Ranges #1	Blade Ranges #2	Shank Dia.	O'all Lg.

Clean-Cut Drill Bits for Wood

Bore smooth and accurate holes across the grain. Also known as brad-point bits. A center guide point prevents the bit from wandering so even overlapping holes can be bored without splintering. Overall length includes the center guide point. Use in portable power tools, power-feed boring machines, and drill presses. ***High-speed steel*** bits can be run at higher speeds than steel bits.

2810A21 ..... $23.05

Drill Bits for Wood Screws

Bits are cut to match a wood screw's thread and shank, resulting in a perfect fit for your screw. They produce clean edges when cutting soft and hard woods. Bits are high-speed steel and have a bright finish. Shank diameter is the same as the bit size. Use in drill presses and portable drills.

Standard length bits are equivalent to a jobbers' length bit; ***long length*** bits are equivalent to a taper length bit.

Dowel Hole Drill Guide

Drill holes for dowels that require exact alignment in the edge, end, or surface of your work. Clamp the jig onto your material, lift and turn the turret to select the drill hole size you need, and drill. The turret has 3/16", 1/4", 5/16", 3/8", 7/16", and 1/2" drill hole sizes. Use the graduations to set the jig to the centerline of your workpiece. Designed for material up to 4" wide.

3123A11 ..... $50.45

About Countersinks

Countersinks form a cone-shaped opening at the top of a hole, which acts as a seat for the head of a screw or rivet. They can also be used for chamfering, deburring, and creating openings for holding material between centers.

Flutes

Fast Cut (Single Flute)

General Purpose (Three Flutes)

General Purpose (Four Flutes)

Smooth Finish (Six Flutes)

***Fast Cut*—**Have one flute and won't vibrate at high speeds. Also great for cutting smaller holes.

***General Purpose*—**Have two, three, or four flutes. Tool life increases with more flutes because the cutting load is distributed over more edges. However, fewer flutes provide better chip clearance, which is a consideration when machining stringy materials like plastic.

***Smooth Finish*—**Have six flutes. These remove more material per revolution and have a longer life than other countersinks.

Body Diameter and Countersink Angle

The countersink body diameter must be equal to or larger than the head diameter of the screw, center, or rivet being countersunk. Use a pilot hole that's larger than 10% of the countersink body diameter.

- ***60° Countersink Angle:*** For holding workpieces between the centers on a lathe.
- ***82° Countersink Angle:*** For flat- and oval-head inch screws.
- ***90° Countersink Angle:*** For flat- and oval-head metric screws. They're also great for chamfering.
- ***100° Countersink Angle:*** For rivets.
- ***120° Countersink Angle:*** For rivets.

Drill-Bit Countersinks

When used in combination with your drill bit (not included), these tools let you drill and countersink wood-screw holes in one quick operation. They attach to the body of your drill bit with two set screws and can be easily adjusted up and down for any length wood screw. All countersinks have four flutes.

Carbon steel countersinks have an 82° angle and are for use in wood and plastic.

High-speed steel countersinks come in your choice of an 82° or 90° angle and are for use in wood, plastic, and most metals. **To Order:** Please specify 82° or 90° countersink angle.

Stop collars control the cutting depth of your countersinks. The inside diameter of the stop collar fits the outside diameter of your countersink. Collars attach easily with two set screws and can be easily adjusted for depth. Made of steel with a black-oxide surface treatment.

Drill Bit Not Included

Stop Collar Sold Separately

★ Overall length is 3/4″.

Drill Bit Countersink Sets

All countersinks have an 82° countersink angle. Sets are furnished in a wood stand.

***7-Piece Sets*—**You'll get one each 3/8″ body dia. countersink for 1/8″, 9/64″, 5/32″, 11/64″, and 3/16″ dia. drill bits; one 7/16″ body dia. countersink for a 13/64″ dia. drill bit; and one 1/2″ body dia. countersink for a 7/32″ dia. drill bit.

		Per Set
Carbon Steel Set	2785A46	$55.38
High-Speed Steel Set	2910A41	102.14

***14-Piece Sets*—**You'll get one each 3/8″ body dia. countersinks for 1/8″, 9/64″, 5/32″, 11/64″, and 3/16″ dia. drill bits; one 7/16″ body dia. countersink for a 13/64″ dia. drill bit; four 1/2″ body dia. countersinks for 3/16″, 13/64″, 7/32″, and 1/4″ dia. drill bits; and four 5/8″ body dia. countersinks for 3/16″, 1/4″, 9/32″, and 5/16″ dia. drill bits.

		Per Set
Carbon Steel Set	2785A48	$125.13
High-Speed Steel Set	2910A45	235.58

Hex Shank Combination Drill Bits and Countersinks for Wood

Make holes for wood plugs in one easy operation. These combination tools consist of a general purpose, high-speed steel jobbers' drill bit and a hardened steel countersink. Tools have an 82° countersink angle and a hex shank that fits all quick-change and standard drill chucks. Bits are securely held by a set screw and can be adjusted up to 1″ for different screw lengths.

For Screw Size Hardwood	Softwood	Drill Bit Size	Drill Bit/ Countersinks	Each	Replacement Drill Bits	Each

#8	#10	1/8″	2747A24	7.92	8870A18	1.15
#10	#12	9/64″	2747A25	7.92	8870A19	1.22

Countersinks for Aluminum, Brass, and Bronze

Three spiral flutes leave a clean, smooth finish on soft metals such as aluminum, brass, and bronze. Made of high-speed steel. **To Order:** Please specify 60°, 82°, 90°, 100°, or 120° countersink angle.

Body Dia.	Shank Dia.	O'all Lg.		Each
1/4″	1/4″	1 1/4″	2742A511	$10.59
3/8″	1/4″	1 5/8″	2742A512	11.81

2″	3/4″	4 1/4″	2742A522	222.42

***Five-Piece Sets*—**You'll get one countersink in each of the following body diameters: 1/4″, 3/8″, 1/2″, 5/8″, and 3/4″. Furnished in a plastic case. **To Order:** Please specify 60°, 82°, 90°, 100°, or 120° countersink angle.

2742A601 ..... **Per Set** $84.83

For information about countersinks, see page 2465.

High-Speed Steel and Cobalt Steel Countersinks

Single End Fast Cut (Single Flute)

High-Speed Steel—For use on ferrous and nonferrous metals such as steel, brass, and bronze.

Cobalt Steel—Heat and abrasion-resistant, these are for use on hard-to-machine metals such as cast iron, stainless steel, Inconel, and titanium.

TiN (titanium nitride) coated countersinks last longer and withstand more heat than uncoated.

To Order: Please specify 60°, 82°, 90°, 100°, or 120° countersink angle, unless noted. Smooth-finish (six-flute) individual countersinks are also available with a 110° countersink angle, except for double-end countersinks.

■ Countersinks with angles 100° and 120° have 3/8" shank dia. ● Has 3/8" shank dia. ◆ Overall length may vary depending on the countersink angle. ▲ Choose from 60°, 82°, or 90° countersink angle. ★ Uncoated countersinks have a black oxide treatment.

Double-End Smooth-Finish (Six-Flute) Countersinks

When one end becomes dull, simply turn the countersink around. All are high-speed steel.

Body Dia.	O'all Lg.		Each	Body Dia.	O'all Lg.		Each
1/8"	1 1/2"	27885A11	$11.73	3/8"	2 1/2"	27885A15	$16.42

6"	1/4"	3109A72	11.91
12"	1/4"	3109A73	21.78

For information about countersinks, see page 2465.

Solid-Carbide Countersinks for Hard and Abrasive Materials

Harder and longer lasting than high-speed steel countersinks, these tools are more effective for cutting hard and abrasive materials. They are not for use in hand-held applications.

TiCN (titanium carbonitride) coated tools last longer than uncoated tools and are best for general purpose cuts in steel and cast aluminum. ***TiAlN*** (titanium aluminum nitride) is the best choice for materials up to a Rockwell hardness of C50. ***AlTiN*** (aluminum titanium nitride) is for high-speed machining on materials with a Rockwell hardness up to C70. Not for use on aluminum.

To Order: Please specify 60°, 82°, 90°, or 100° countersink angle. For coated countersinks, also specify TiCN, TiAlN, or AlTiN coating.

Single End Fast Cut (Single Flute)

Double End Smooth Finish (Six Flute)

Single-End Countersinks

Sizes 1/8″ through 1/4″ are made entirely of carbide. Sizes 5/16″ and larger have a solid carbide body that's brazed onto a hardened steel shank. *Note:* Overall length may vary slightly depending on the countersink angle.

Five-Piece Single-End Countersink Sets

You'll get one countersink in each of the following body diameters: 1/4″, 3/8″, 1/2″, 5/8″, and 3/4″. Furnished in a metal case.

To Order: Please specify 60°, 82°, 90°, or 100° countersink angle. For coated countersink sets, also specify TiCN, TiAlN, or AlTiN coating.

	Uncoated	Per Set	Coated	Per Set
Fast Cut (Single Flute)	2922A421	$208.53	2944A71	$274.26
General Purpose (Three Flute)	29485A21	229.89	2944A72	321.63
Smooth Finish (Six Flute)	2923A523	215.05	2944A73	285.42

Double-End Smooth-Finish (Six-Flute) Countersinks

When one end is worn, simply turn the countersink around for a sharp cutting edge. All are uncoated solid carbide.

To Order: Please specify 60°, 82°, 90°, 100°, or 120° countersink angle.

Body Dia.	O'all Lg.		Each	Body Dia.	O'all Lg.		Each	Body Dia.	O'all Lg.		Each
1/8″	1 1/2″	27655A11	$19.60	5/16″	2 1/2″	27655A14	$50.52	5/8″	3 1/2″	27655A17	$111.73

1/4″	2″	27655A13	30.63	1/2″	3″	27655A16	84.17				

Carbide-Insert Countersinks

Instead of sharpening your countersink, rotate the carbide insert in these tools to reveal a fresh cutting edge. When all of the edges are used, just replace the insert. You can use them on ferrous and nonferrous metals including steel, aluminum, and copper. An uncoated carbide insert and a Torx wrench are included with each tool.

Uncoated carbide inserts are for general purpose use. ***TiN (titanium nitride) coated carbide inserts*** offer higher heat resistance and reduced friction for increased productivity and tool life.

To Order: For countersinks, please specify 60°, 82°, 90°, or 100° countersink angle.

With Triangle Insert

With Square Insert

Precision Countersinks for CNC Applications

A tight tolerance ensures accuracy and precision on computer-controlled machines. All have six flutes and the tolerance is +0.001″/-0.001″. ***High-speed steel*** is for use on a wide variety of materials including wood, steel, brass, and bronze. Carbide is harder and longer lasting than high-speed steel and is for use on hard and abrasive materials such as cast aluminum and fiberglass.

To Order: Please specify 60°, 82°, 90°, or 100° countersink angle.

Repair Tools for 60° Countersunk Holes

Made with a large number of flutes and cutting edges to lightly shear off material, these tools repair and clean out holes used for machining between centers. The countersink angle is 60°. Sizes 5/16″ to 3/4″ have a solid-carbide head brazed to a steel shank. The 1/4″ size is made entirely of carbide.

Body Dia.	Shank Dia.	O'all Lg.	No. of Flutes		Each
1/4″	1/4″	2″	6	27865A11	$21.33
5/16″	1/4″	2 5/8″	6	27865A12	26.94

3/4″	3/8″	2 3/4″	10	27865A16	87.17

For information about countersinks, see page 2465.

Anti-Vibration Through-Hole Countersinks

Also known as zero-flute countersinks, all have a single flute that passes through the center of the tool. This design reduces vibration (chatter) for smooth cuts and prevents chips from clogging. These countersinks are also great for deburring.

Single End and ***Double End***—*High-speed steel* is for use on steel and other ferrous metals. *Cobalt steel* has higher heat and abrasion resistance for use on high-tensile alloys, stainless steel, and other hard-to-machine materials. Double-end countersinks can be turned around when one end becomes worn.

Single-End with Pilot—The pilot acts as a guide to maintain alignment in the hole. All are high-speed steel for use on steel and other ferrous metals. They have an 82° countersink angle.

To Order: Please specify countersink angle when a choice is given.

Single-End with Pilot Set—All have an 82° countersink angle. You'll get one each of the piloted-style tools above furnished in a wood block stand.

2739A29 ..... **Per Set** $93.67

Drill-Tip Countersinks for Flat- and Oval-Head Screws

One tool is all you need to drill and countersink for flat- and oval-head screws. All countersinks are high-speed steel and have two flutes. ***Machine screw and fractional sizes*** have an 82° countersink angle. ***Metric sizes*** have a 90° countersink angle.

Machine Screw and Fractional Sizes

Step-Saver Countersinks

Single-End High-Speed Steel

Double-End Solid Carbide

A drill point is blended into two of the four flutes, so you can drill a starter hole and countersink in one step—no need for separate tools.

Double-End—When one end becomes dull, simply turn the countersink around.

To Order: Please specify 60°, 82°, 90°, 100°, or 120° countersink angle.

Single-End High-Speed Steel

For information about countersinks, see page 2465.

Drill-Point Countersinks

Plain Style

Radius Style

Bell Style

The tips of these countersinks have small drill points and are also double-ended (unless noted)—if one end becomes worn, simply turn the tool around.

Plain Style—For general purpose use.

Radius Style—The surface formed by these tools minimizes contact between the material and the centers, preventing damage and allowing for more precise machining between centers than 60° plain style tools.

Long Plain Style—A great choice when a longer reach is needed.

Bell Style—For applications where accuracy is important and where the material will go through several machining processes. The tool bevels the outer edges and gives an additional 120° chamfer to prevent damage to the center hole.

Use ***60° countersinks*** to create the holes needed to machine material between centers. The drill tip creates a small gap that prevents damage to the points of live or dead centers. The tips on ***82°*** and ***90° countersinks*** create a small pilot hole at the bottom of the countersunk hole to facilitate drilling.

High-speed steel countersinks are for use on steel and other ferrous metals. ***Cobalt steel countersinks*** have higher heat and abrasion resistance for use on high-tensile alloys, stainless steel, and other hard-to-machine materials. ***TiN (titanium nitride) coated high-speed steel countersinks*** have a wear- and heat-resistant coating that improves tool life and reduces friction. In most applications, the user may be able to increase speeds, and in many cases improve feed rates as well.

For information about countersinks, see page 2465.

Solid-Carbide Drill-Point Countersinks

Longer-lasting than high-speed steel drill-point countersinks and great for hard and abrasive materials. The tips of these countersinks have small drill points and are double-ended—if one end becomes worn, simply turn the tool around.

Use ***60° countersinks*** to create the holes needed to machine material between centers. The drill tip creates a small gap that prevents damage to the points of live or dead centers. The tips on ***82°*** and ***90° countersinks*** create a small pilot hole at the bottom of the countersunk hole to facilitate drilling.

Uncoated tools are for use with hardened steel, nonferrous metals such as aluminum, and nonmetallic materials. ***Coated tools*** offer superior performance and longer life. *TiCN* (titanium carbonitride) coated tools last longer than uncoated tools and are best for general purpose cutting of steel. They are also the best option for cuts in cast aluminum. *TiAlN* (titanium aluminum nitride) is the best choice for materials up to Rockwell hardness C50. Not for use on aluminum. *AlTiN* (aluminum titanium nitride) is for high-speed machining on materials with a Rockwell hardness between C50 and C70. Not for use on aluminum.

To Order: Please specify 60°, 82°, or 90° countersink angle. For coated tools, also specify TiCN, TiAlN, or AlTiN coating.

Six-Piece Countersink Sets

You'll get one countersink in each of the following trade sizes: 1, 2, 3, 4, 5, and 6. Furnished in a metal case.

To Order: For coated countersink sets, please specify TiCN, TiAlN, or AlTiN coating.

	Uncoated	Per Set	Coated	Per Set
60° Countersink Angle	2925A22	$221.82	2936A31	$260.39
82° Countersink Angle	2925A72	221.82	2936A32	260.39
90° Countersink Angle	2925A73	221.82	2936A33	260.39

Hand-Driven Countersinks

A manually powered, angled shank makes it easy to countersink and debur next to a shoulder and in hard-to-reach holes.

Complete tool is furnished in a plastic case and includes a 5″ long plastic handle and four high-speed steel countersinks with a 90° countersink angle in 1/8″, 1/4″, 5/16″, and 3/8″ body diameters.

		Each
Complete Tool	28775A61	$54.80
Replacement Parts		
5″ Long Plastic Handle	28775A67	6.17
1/8″ Countersink	28775A62	5.90
1/4″ Countersink	28775A63	16.11
5/16″ Countersink	28775A64	16.46
3/8″ Countersink	28775A65	16.37

Tight-Spot Reverse Countersinks

When you can't get at your work with a regular tool, these reverse countersinks do the trick. Simply put the shank (sold separately) in your drill chuck, insert shank into a through hole, and attach the countersink head on the end. Pull back on the drill to countersink the backside of the hole. Shanks are 6″ long and are tempered steel; countersink heads are high-speed steel.

About Counterbores

Counterboring

Counterboring— Enlarge the top portion of an existing hole, forming a cylindrical-shaped opening with a flat bottom that acts as a seat for the head of a screw or wood plug.

Shallow Counterboring

Shallow Counterboring— Bore a shallow spot (1/8″ or less) around a hole so that the head of the screw, bolt, or nut is slightly raised above the surface of the material (also known as spot facing).

Pilots— A pilot guides the counterbore as it penetrates the material, keeping it centered over the drilled screw hole and ensuring a level seat for the screw head. ***Counterbores with built-in pilots*** have a counterbore and pilot made from one piece of steel. ***Changeable-pilot counterbores*** have a removable pilot, allowing you to use various pilot diameters in a single tool.

Drill-Bit Counterbores for Wood and Plastic

Drill Bit Not Included

Stop Collar Sold Separately

Simply position one of these counterbores on your standard jobbers' or guide-point (brad-point) drill bit and lock it into position with the two set screws. You can now drill and counterbore in a single step.

All are made of steel and have four flutes. Drill bits are not included. For general purpose jobbers' drill bits, see page 2432.

Stop collars control the cutting depth of your counterbore. They attach with two set screws and are made of steel.

Six-Piece Drill-Bit Counterbore Set— Includes one each of the above counterbores marked with a ✓. The set comes in a wood stand.

3105A31 ..... **Per Set** $187.21

For information about counterbores, see page 2470.

Large-Diameter Drill-Bit Counterbores for Wood

Also known as multi-spur counterbores, these counterbores have a single set screw to secure them to any woodworking bit that has a 1/2″ shank and a cutting diameter of 1/2″ and larger. Counterbores are made of carbon steel and are for wood applications only. The drill bit is not included.

Drill-Tip Counterbores

In one timesaving operation, drill and counterbore holes with sufficient clearance for socket-head cap screws. All counterbores have round shanks and are made of high-speed steel for use on most metals.

Counterbores with Built-In Pilots

High-Speed Steel

Carbide Tipped

Also known as cap-screw and solid-pilot counterbores, these round shank tools have four spiral flutes (unless noted) for easy cutting with no chip clogging.

High-speed steel counterbores are for use on most metals.

Choose *TiN (titanium nitride) coated high-speed steel counterbores* when you need increased wear and heat resistance. For use on ferrous metals such as steel and stainless steel.

Grade C-2 carbide-tipped counterbores are for cast iron and nonferrous metals such as aluminum, brass, and copper.

Grade C-5/C-6 carbide-tipped counterbores are for use on steel.

Machine Screw and Fractional Sizes— Choose from standard size, 1/64″ oversize, and 1/32″ oversize styles. Use the 1/64″ and 1/32″ oversize counterbores when screw holes in sheets or layers of material are misaligned. **To Order:** Please specify size: standard, 1/64″ oversize, or 1/32″ oversize.

Metric Sizes— All are high-speed steel and 0.5 mm oversize.

Counterbore Sets

10-Piece Machine Screw and Fractional Size Sets— Each set contains uncoated high-speed steel counterbores for screw sizes #4 through 1/2″. Come in a wood case.

		Per Set
Standard Size	2919A12	$274.78
1/64″ Oversize	2919A14	274.78
1/32″ Oversize	2919A16	274.78

8-Piece Metric Size Set— Each set contains uncoated high-speed steel counterbores for metric screw sizes 3 mm through 14 mm. Come in a wood case.

		Per Set
0.5 mm Oversize	2740A19	$279.65

For information about counterbores, see page 2470.

Counterbores for Fillister-Head Screws

Get accurate counterbored holes for fillister-head machine screws. These tools are made of high-speed steel for use on most metals. All have a round shank and two straight flutes. Shank diameter is slightly larger than the counterbore body diameter.

For Screw Size	Body Dia.	Pilot Head Dia.	O'all Lg.		Each

Adjustable-Diameter Counterbores

Straight Shank

Counterbore a variety of diameters with one tool. Simply turn the set screw and adjust the blades to the diameter you need. Use these counterbores to machine tough steel forgings, cast iron, and aluminum alloys. They have a steel body with replaceable high-speed steel blades and carbon steel pilots. The replaceable pilots provided are the minimum size recommended for use with these counterbores. If your job requires a larger pilot size, see 3103A series pilots for changeable-pilot counterbores (sold separately on this page). *Note:* Not for use in hand-held, portable tools.

Changeable-Pilot Counterbores

Narrow-Shank Counterbore Shown with Pilot (Pilot Sold Separately)

Pilot

Unlike counterbores with built-in pilots, these tools allow you to change pilots so you can use the right pilot diameter for your application. All have three flutes, except the narrow-shank high-speed steel counterbores, which have four flutes. *Note*: Changeable counterbore pilots are sold separately.

Standard-Shank Counterbores— Use *high-speed steel* tools on most metals and plastic. *Carbide-tipped* tools come in two grades. **To Order:** For carbide-tipped counterbores, please choose grade for steel or grade for nonferrous metals (such as aluminum, brass, and bronze) and cast iron.

Narrow-Shank Counterbores— Also known as aircraft counterbores, these have a narrower ¼″ diameter shank and are designed to fit in aerospace tools that use a smaller shank size. *High-speed steel* tools are for use on most metals and plastic. *Carbide-tipped* tools are for soft nonferrous metals such as aluminum, brass, and bronze.

Steel Pilots for Changeable-Pilot Counterbores

When selecting a pilot, be sure the pilot shank diameter is compatible with your counterbore. The length of the pilot head is equal to its diameter. All are carbon steel. **Also Available:** Other sizes. Please ask for 3103A999 and specify pilot diameter and shank diameter.

Standard-Shank High-Speed Steel Changeable-Pilot Counterbore Set

15-Piece Set— You'll get five high-speed steel counterbores in sizes 1/4″-1/2″ × 16ths. You'll also get 10 pilots: 1/8″, 5/32″, 3/16″, and 1/4″ diameters with a 3/32″ shank; 3/16″, 7/32″, 1/4″, and 5/16″ diameters with a 5/32″ shank; and 1/4″ and 5/16″ diameters with a 3/16″ shank. Come in a wood case.

2817A71 ..... **Per Set** $375.38

For information about counterbores, see page 2470.

Tight-Spot Reverse Counterbores

If limited space makes it difficult to counterbore your hole, access it from the other side with this tool. Simply put the shank (sold separately) in your drill chuck, insert shank into a through hole, and attach the counterbore on the end. Pull back on the drill to counterbore the backside of the hole. All are high-speed steel with four flutes; for use on most metals. Shanks are 6″ long and made of steel.

Contouring Router Bits

A ball-nose design with upward chip removal provides accurate, smooth carving and modeling in CNC routers. These solid-carbide router bits allow for contours and curved corners and are for use on modeling foam, soft and hard plastics, and aluminum blocks and plates. All have two spiral flutes.

Router Bits for Aluminum

Machine aluminum on your CNC router with these solid-carbide bits. All have one flute.

Grooving and Slotting— Have a spiral flute for upward chip removal. They machine multiple sheets and plates.

Edging— Have a straight flute and do not pull up on your material, making them great for edges.

Grooving and Slotting

Edging

Router Bits for Stainless Steel

An AlTiN (aluminum titanium nitride) coating over these solid-carbide router bits provides long tool life for cutting stainless steel. They have two spiral flutes for upward chip removal. *Note*: Do not use a dust collector when cutting stainless steel, as it may cause a fire.

Cutting Dia.	Cutting Lg.	Shank Dia.	O'all Lg.		Each

Router Bits for Fiberglass and Ceramics

Fiberglass Cutting— The diamond-pattern cutting edge creates small chips for a fine finish on fiberglass-reinforced polyester, graphite-composite laminates, and some grades of Kevlar. Bits are made of solid carbide. ***Plain end*** are for side routing. ***Bur end*** are for side and bottom routing. ***End-mill end*** are for side and bottom routing, as well as for plunge cuts. ***Drill-point end*** are for fast plunge cutting and slotting.

Ceramic Cutting— Not to be confused with plated tools, a 40-grit diamond coating is firmly bonded to the router bit body using a high-temperature metal alloy. These bits stay sharper longer than solid carbide for longer tool life. Use for routing nonmetallic composites such as graphite, fiberglass, phenolics, and ceramics.

Router Bits for Plastic

Carbide-tipped bits outlast ***high-speed steel*** bits. ***Solid-carbide*** bits last longer than carbide-tipped bits and are not for hand-held applications.

(1 & 2) Bits for Hard and Soft Plastic

1

Up Cut

Down Cut

2

(1) Smooth-finish bits produce a smooth groove or slot in soft and hard plastic. All have two spiral flutes and are pilotless. *Up-cut bits* provide upward chip removal and the best finish on the bottom of your material; *down-cut bits* push chips down and give the best finish on the top of your material.

(2) Edge-rounding bits create round edges on soft and hard plastic sheets. Bits have 3/8″ cutting length. All have one straight flute and are pilotless.

Cutting Dia.	Cutting Lg./Radius	Shank Dia.	O'all Lg.		Each
(1) Smooth-Finish Solid-Carbide Bits—Up Cut					
1/4″	3/8″ length	1/4″	2 1/2″	8782A11	$20.50
1/4″	3/4″ length	1/4″	2 1/2″	8782A12	21.90

(2) Edge-Rounding Solid-Carbide Bits					
1/4″	1/8″ radius	1/4″	2 1/2″	3144A21	41.00
1/4″	3/16″ radius	1/4″	2 1/2″	3144A22	41.00
1/4″	1/4″ radius	1/4″	2 1/2″	3144A23	41.00

(3-5) Bits for Plastic Laminates

3

4

5

Great for trimming and edging laminate countertops and other laminate materials. All have straight flutes.

(3) Flush/22° bevel-cutting bit has two flutes that make flush and 22° bevel cuts; it is pilotless.

(4) Flush-cutting and ***7° bevel-cutting*** bits have one flute and a solid pilot for either flush or 7° bevel cuts.

(5) Smooth-edging bits have two flutes (unless noted) with a ball-bearing pilot for flush cuts. The bearing diameter is equal to the cutting diameter.

Cutting Dia.	Cutting Lg.	Shank Dia.	O'all Lg.		Each
(3) Flush/22° Bevel-Cutting Carbide-Tipped Bit

Router Bits for Wood and Laminates

9

Up Cut

Down Cut

10

Up Cut

Down Cut

The spiral flutes on these bits cut soft and hard natural woods, wood composites such as plywood and particleboard, and solid-surface materials such as Corian. Made of solid carbide.

Up-Cut Bits— Designed for effective, upward chip removal. These bits are the best choice for straight grooving and slotting applications where a smoother finish on the bottom of the material is desired. Because these bits are designed to lift, it is necessary to securely clamp your material.

Down-Cut Bits— Push chips down from the cut. Use this style for grooving and slotting applications where a smoother finish on the top of your material is desired. They are the best choice for laminates because they eliminate edge chipping. Also good for small parts that would be difficult to clamp down.

(9) Smooth-finish bits have two flutes and make fast, clean cuts with a smooth finish.

(10) Ultra-smooth-finish bits have three flutes and provide a smoother finish than smooth-finish bits. Also for use on hard plastics.

Electric and Air-Powered Routers

Electric routers are CSA certified, UL listed, and meet OSHA requirements, unless noted. All are double insulated and have a two-prong plug.

Style A router comes with a 1/4″ collet. *Styles B-D* come with 1/4″ and 1/2″ collets. *Style C* router has a precision centering system for accurate cuts at any depth and is C-UL listed.

Style D router is variable speed with plunging capability. It has a six-position speed control that matches rpm to your material and circuitry that maintains constant speed under full load. An eight-position turret and depth-rod control maintain cutting depth. Also has a swing-away chip shield. C-UL listed.

Air-powered router *(Style E)* includes a 6-ft 3/8″ air hose and a 3/8″ collet. Recommended operating pressure is 90 psi. Air consumption is 38 cfm. Air inlet is 1/4″ NPT. Additional collet sizes are sold separately below.

About Chucking Reamers and Hand Reamers

Reamers are rotary cutting tools used to enlarge an existing hole to an exact size, as well as provide a smooth finish to the walls of the hole. Reaming may be done with a variety of machine tools or by hand. *Note:* When using a reamer, never rotate it in the reverse direction of the cut. This will ruin its accuracy.

Types of Reamers

Chucking Reamers— Also known as machine reamers, they are used in drill presses, turret lathes, screw machines, and other machine tools. The shank is round or Morse taper and the cutting end of the reamer is ground with a 45° chamfer angle for easy hole entry.

Hand Reamers— A square portion on the end of the shank allows the reamer to be turned by hand with an adjustable wrench or a straight-handle tap wrench. Most hand reamers have a slight taper at the cutting end for easy hole entry.

Reamer Material

High-speed steel is used on a wide variety of materials including tool steel, cast iron, and aluminum.

Cobalt steel can be run up to 25% faster than high-speed steel and has better abrasion and heat resistance for longer tool life. Use on hard-to-machine materials such as nickel alloys, stainless steel, Inconel, and titanium.

Carbide tipped and ***solid carbide*** have better abrasion resistance and retain a sharper, harder edge at higher temperatures than high-speed steel and cobalt steel. Typically used on abrasive materials such as cast iron, nonferrous alloys, plastics, and hardened steels.

Solid carbide offers more wear resistance for the most accuracy but requires rigid tool holding to prevent breakage.

High-Speed Steel and Cobalt Steel Chucking Reamer Sets

All reamers have a round shank.

Standard-Length Reamers— Shank diameter is slightly smaller than the reamer cutting diameter except 3008A5, which is equal to the reamer cutting diameter.

Drill-Length Reamers— Have the same overall length as a jobbers' twist drill bit for added rigidity. The shank diameter is the same as the cutting diameter.

Straight-flute reamers are used for most jobs. ***Spiral-flute*** reamers are right-hand spiral, right-hand cut. They are ideal where chip removal is necessary, such as in blind holes. They also give a smoother finish and work well where there is an interrupted cut, such as in keyways.

High-Speed Steel and Cobalt Steel Chucking Reamers

Straight Flute

Spiral Flute

Straight-flute reamers are used for most jobs.

Spiral-flute reamers have right-hand spiral, right-hand cut. They are ideal where chip removal is necessary, such as in blind holes. They also give a smoother finish and work well where there is an interrupted cut, such as in keyways.

High-Speed Steel Fractional Sizes—Round Shank

Shank diameter is slightly smaller than the reamer cutting diameter. *Straight flute* cutting diameter tolerance is +0.0002″, –0.0000″. *Spiral flute* cutting diameter tolerance is +0.0002″, –0.0000″ for 1/32″ to 1/2″; +0.0003″, –0.0000″ for 17/32″ to 5/8″; and +0.0004″ to +0.0001″ for 21/32″ to 1 1/2″.

TiN-Coated High-Speed Steel Fractional Sizes—Round Shank with Spiral Flutes

TiN-coated (titanium nitride) reamers run faster than uncoated high-speed steel and last twice as long. The coating acts as a barrier against high temperatures and abrasion. They are right-hand spiral, right-hand cut. Use on free-machining steels as well as nonmetallic materials and plastics. Not for use on aluminum and titanium alloys. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002", –0.0000".

High-Speed Steel and Cobalt Steel Oversize/Undersize Sizes—Round Shank with Straight Flutes

Allow for a slightly tighter or looser fit than the common fractional reamer diameters. Oversize reamers are 0.001" larger than the fractional size, and undersize are 0.001" smaller. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002", –0.0000".

High-Speed Steel Decimal Sizes—Round Shank with Straight Flutes

Flute length, overall length, and number of flutes are equivalent to dimensions of fractional, letter, and wire gauge size chucking reamers. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002", –0.0000".

To Order: For standard decimal sizes in increments of 0.0005" (size must end in 0 or 5), please ask for the part number in the appropriate size range below and specify the exact size.

Also Available: Other decimal sizes in 0.0001" increments. Please ask for 8803A999 and specify the exact size.

High-Speed Steel and Cobalt Steel Letter Sizes—Round Shank with Straight Flutes

Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002″, –0.0000″.

To Order: Please specify exact letter size within the size range listed.

For information about reamers, see page 2476.

High-Speed Steel and Cobalt Steel Chucking Reamers *(Continued from previous page)*

High-Speed Steel and Cobalt Steel Wire Gauge Sizes—Round Shank with Straight Flutes

High-speed steel wire gauge sizes 71-80 and *cobalt steel wire gauge sizes 61-80* have shank diameters equal to the reamer cutting diameter. All other sizes have shank diameters slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002″, –0.0000″.

To Order: Please specify exact wire gauge size within the range listed.

★ Size 22 has 6 flutes. ● Overall length is 2½″.

High-Speed Steel and Cobalt Steel Dowel-Pin Sizes—Round Shank with Straight Flutes

Size holes in preparation for installing dowel pins. Two reamer diameters are listed for each dowel-pin diameter so holes can be made for a slightly tighter- or looser-fitting pin. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0000″, –0.0002″.

High-Speed Steel Metric Sizes—Round Shank with Straight Flutes

Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.005, –0.000 mm for 1.0 to 12.5 mm and 30.0 mm; +0.008, –0.000 mm for 13.0 to 15.5 mm; and +0.01, +0.0025 mm for 16.0 to 25.0 mm.

Also Available: Cobalt steel reamers in sizes 1.5 through 12.5 mm. Please ask for 2735A51 and specify size.

High-Speed Steel Hand Reamers for Morse Taper-Socket Holes

Turn existing straight, drilled holes into Morse taper holes. Reamers are also good for sizing and smoothing existing Morse taper holes and for removing nicks and burs in machine spindles. All have straight flutes. Use an adjustable wrench or straight-handle tap wrench (sold separately).

For information about reamers, see page 2476.

Solid Carbide Chucking Reamers

Fractional, Wire Gauge, and Metric

Oversize/Undersize, Decimal, and Dowel Pin

Solid carbide construction provides superior accuracy. Reamers are shorter and have better abrasion and temperature resistance than standard-length high-speed steel, cobalt steel, and carbide-tipped chucking reamers. They require a rigid machine setup.

Fractional Sizes—Round Shank with Straight Flutes

Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0003″, –0.0000″ for 1/16″ to 1/4″ and +0.0004″, –0.0000″ for 9/32″ to 1/2″.

1/2″	1 1/2″	4″	6	3026A44	132.28

Oversize/Undersize Sizes—Round Shank with Straight Flutes

Allow for a slightly tighter or looser fit than the common fractional reamer diameters. Oversize reamers are 0.001″ larger than the fractional size, and undersize are 0.001″ smaller. Flute length is half the reach length. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002″, –0.0000″.

Wire Gauge Sizes—Round Shank with Straight Flutes

Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0003″, –0.0000″.

To Order: Please specify exact size within range listed.

Avail. Sizes	Flute Lg.	O'all Lg.	No. of Flutes

Dowel-Pin Sizes—Round Shank with Straight Flutes

Used to size holes in preparation for installing dowel pins. Two reamer diameters are listed for each dowel-pin diameter so holes can be made for jobs that require a slightly tighter- or looser-fitting pin. Flute length is half the reach length. Cutting diameter tolerance is +0.0002″, –0.0000″.

For information about reamers, see page 2476.

Carbide-Tipped Chucking Reamers

Carbide tips brazed to a one-piece hardened tool steel body provide better abrasion resistance and retain a sharper, harder edge at higher temperatures than high-speed steel and cobalt steel. Reamers have a round shank and straight flutes. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0003″, –0.0000″.

Carbide-Tipped Expansion Chucking Reamers

Slots allow expansion as the adjusting screw is tightened. Bodies are made of one-piece tool steel. The carbide-tipped cutting edges run the full length of the flutes. All have a round shank and straight flutes. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0003″, –0.0000″. Minimum expansion is 0.006″ for 3/8″ and 7/16″; 0.010″ for 1/2″ to 7/8″; 0.013″ for 1″ to 1 1/2″; and 0.015″ for 1 3/4″.

Note: These reamers are not designed for producing holes larger than the listed diameter or for producing holes of various sizes. The expansion screw should never be loosened.

High-Speed Steel Hand Reamers

Straight Flute

Spiral Flute

A slightly tapered cutting end eases hole entry for final sizing of drilled holes. Use on most ferrous and nonferrous materials. All have a round shank and are for use with a straight-handle tap wrench (not included; see page 2519).

Straight-flute reamers are for general purpose reaming.

Spiral-flute reamers have a left-hand spiral, right-hand cut and are preferred for use on holes that have an interrupted cut, such as a keyway.

Fractional Sizes

Cutting diameter tolerance is +0.0002″, –0.0000″ for 1/8″ to 1/2″; +0.0003″, –0.0000″ for 9/16″ and 5/8″; and +0.0001″, +0.0004″ for 11/16″ to 1 1/4″. Recommended tap wrench is 2546A13 for 1/8″ to 1/4″; 2546A16 for 5/16″ to 9/16″; and 2546A19 for 5/8″ to 1 1/4″.

For information about reamers, see page 2476.

High-Speed Steel Expansion Hand Reamers

Straight Flute

Spiral Flute

Slightly enlarge previously drilled holes for proper fit. The undersized pilot on these reamers acts as a guide to maintain alignment with the hole to be reamed. Slots in the hollow center permit expansion as the adjusting screw is tightened. Recommended expansion limit is 0.010″ for 1/4″ to 5/8″ diameters and 0.013″ for 3/4″ to 1″. Cutting diameter tolerance is +0.0000″, –0.0005″. Use with an adjustable wrench or straight-handle tap wrench (sold separately).

Straight-flute reamers are for general purpose reaming.

Spiral-flute reamers have a left-hand spiral, right-hand cut and are for use on holes that have an interrupted cut, such as a keyway. They provide a smoother finish.

Replaceable-Blade Adjustable-Size Hand Reamers

Angle and Straight Blade

Extra-Long Angle Blade

Handle multiple hole sizes with just one tool—loosen one nut and tighten another to move the six adjustable blades within their size range. They're an excellent choice for reaming bushings to a precise fit when size needs to be determined during assembly. Blades can be reground and replaced. To measure size, adjust blades to a known size (such as a bushing or ring), or measure across two opposite blades with a micrometer.

Also Available: Optional reamer extensions for all except extra-long angle-blade reamers. Use in place of the end adjusting nut to align holes that are spaced far apart. Made of steel. Please ask for 3004A22 and specify McMaster-Carr part number.

Angle-blade reamers are for general purpose use and for use on holes that have an interrupted cut, such as a keyway. **Also Available:** Replacement blades. Please ask for 2987A48 and specify diameter range.

Straight-blade reamers are for general purpose reaming. Blades outlast angle-blade reamers. **Also Available:** Replacement blades. Please ask for 3141A4 and specify diameter range.

Extra-long angle-blade reamers are great for aligning holes that are spaced far apart. They have an extra-long, permanently mounted pilot. A floating sleeve steadies the pilot. **Also Available:** Replacement blades. Please ask for 3027A3 and specify diameter range.

Optional Tap Wrenches

For 3141A reamers with an overall length of 4 1/2″ and shorter.

2546A12 ..... $47.09

For 2987A and 3141A reamers with an overall length of 4 3/4″-7 1/2″ and 3027A reamers with an overall length of 23 1/2″ and shorter.

2546A15 ..... $86.21

For 2987A and 3141A reamers with an overall length of 8 1/8″-11 1/4″ and 3027A reamers with an overall length of 27 1/8″.

2546A16 ..... $110.77

For 2987A and 3141A reamers with an overall length of 12″ and longer.

2546A19 ..... $335.85

For information about reamers, see page 2476.

High-Speed Steel Reamers for Taper-Pin Holes

Accurately ream previously drilled holes for standard taper pins. All reamers have a round shank and are tapered 1/4″ per foot.

Straight- and ***spiral-flute hand reamers*** are square drive. For pin size Nos. 7/0-4/0, use a common adjustable wrench or a pin vise (see 8455A on page 2566). Others are used with a straight-handle tap wrench (see 2546A on page 2533). Recommended tap wrench for Nos. 3/0-7 and 2.00-5.00 mm is 2546A13; Nos. 4-10 and 3.00-13.00 mm, use 2546A16; Nos. 8.00-20.00 mm, use 2546A18.; and Nos. 11-14, use 2546A19.

Straight-flute reamers are used in easy-to-ream materials, such as aluminum and brass. *Spiral-flute* reamers have a left-hand spiral, right-hand cut that operates with ease in hard-to-ream materials, such as high-carbon steel and cast iron.

Helical-flute chucking reamers have left-hand helical construction, which moves chips forward to prevent chips from packing in flutes. This reduces breakage and produces a fine finish.

High-Speed Steel Combination Drill Bit and Reamer for Taper-Pin Holes

Drill and ream tapered holes for taper pins in one operation. All are tapered at 1″ per 50″ and have chip breakers on the cutting edge, a straight shank, and a 118° point. Designed for machine reaming.

Reamers for Structural Steel

Also known as bridge reamers, car reamers, and aligning reamers. Use them to ream, true, enlarge, align, and debur holes in structural steel. Ends are tapered for easy entry into out-of-line holes. All are made of high-speed steel and have a left-hand spiral and right-hand cut. Not for reaming tapered holes.

Round Shank

Three flats provide a secure fit in portable electric and air tools. Cutting diameter tolerance is +0.010″, –0.000″.
